DECISIONS IN PATENT AND TRADE-MARK CASES, March 2, 9, 16, 23, 30	5, 215, 439, 641, 825
TRADE-MARKS:	
Published, March 2, 9, 16, 23, 30	15, 227, 445, 653, 857
Registrations Granted, March 2, 9, 16, 23, 30	34, 263, 476, 679, 884
Registrations Renewed, March 2, 9, 16, 23, 30	45, 273, 481, 684, 900
Registrations Canceled, March 2, 9, 16, 23, 30	51, —, —, 684, 900
Registrations Amended, Surrendered, Disclaimed, Corrected, Etc., March 2, 9, 16, 23, 30	51, 277, 484, 685, 900
Registrations, Republished, March 2, 9, 16, 23, 30	52, 277, 485, 686, 901
REISSUES, March 2, 9, 16, 23, 30	79, 307, 511, 705, 925
PLANT PATENTS, March 2, 9, 16, 23, 30	79, 308, 512, 706, ——
PATENTS, March 2, 9, 16, 23, 30	80, 309, 513, 707, 926
DESIGNS, March 2, 9, 16, 23, 30	196, 418, 621, 803, 1025

ANNOUNCEMENTS

APPLICATIONS Condition of Pending	3, 213, 437, 639, 823
BULLETIN OF DECISIONS ON TRADE-MARKS	851
NOTICES:	
Adverse decisions in interferences	10, 649
Cancellation notices	10, 224
Classification of inventions, Changes in:	
Classification Order No. 23	832
Disclaimers:	
D'Alelio, Gaetano F	11
Fregeolle, Oscar	649
Jones, Ralph E	831
Klocke, William	649
Poupitch, Ouglijesa J	831
Rogers, George L	831
Samuel, Arthur L	831
Upson, Walter L., (2 cases)	11
Woolsey, Theodore A	11
Erratum—Trade-Mark Registrations Republished, No. 305,484	224
International convention for the protection of industrial property	831
Patents, List of adjudicated	224, 649, 831
Weekly issue subscription service	831
PATENT SUITS	9, 223, 648, 830
REGISTER OF PATENTS AVAILABLE FOR LICENSING OR SALE	11, 224, 441, 649, 847

TABLE OF CASES REPORTED

	Page
• Camp, In re	439
• Christian v. Muller, Muller v. Christian	646
• Evans, In re	5
• Funk Brothers Seed Company v. Kalo Inoculant Company	641
• Knutson, Amos T., et al. v. Jimmiebel Gallsworthy, as executrix of the estate of the deceased, Benjamin Gallsworthy, et al	215
• Lambert, In re	644
• Metzner, In re	7
• West Disinfecting Company v. Cliff C. Owen	825
• Willson et al. v. Graphol Products Co. Inc	827

[Decisions of the United States Court of Appeals for the District of Columbia are indicated by the letter (*); of the United States Court of Customs and Patent Appeals by an asterisk (•); and of the Supreme Court of the United States by the letter (*).]

Patents expiring: Patent Numbers 1,794,354 to 1,795,283, inclusive, issued March 3, 1931, expire March 2, 1948

Condition of Applications Under Examination at Close of Business Feb. 13, 1948

(Total number of applications awaiting action, excluding Trade-Mark Division, 153,188; Trade-Mark Division, 32,271. Oldest new case, Mar. 4, 1946; oldest amended, Jan. 25, 1946.)

DIVISIONS, EXAMINERS, AND SUBJECTS OF INVENTIONS	Oldest new application awaiting office action: New	Oldest new application awaiting office action: Amended	Applications awaiting action
1. GOLDBERG, A. J., Food Apparatus; Closure Operators; Fences; Gates; Planters; Plows; Harrows and Diggers; Plant Husbandry; Scattering Unloaders; Baths, Closets, Sinks, and Spittoons; Sewerage.	May 22	Jun 7	3,587
2. HERRMANN, D., Fishing, Trapping and Vermin Destroying; Bee Culture; Dairy; Animal Husbandry; Presses; Tobacco; Textile Wringers; Butchering.	Apr. 19	Mar. 4	4,009
3. MARMELSTEIN, N., Metal Founding and Treatment; Metallurgy (Process and Apparatus)	†Apr. 23	Nov. 8	1,552
4. BISHOP, WALTER C., Conveyors; Hoists; Handling Apparatus; Excavating; Elevators; Fire Escapes; Ladders; Scaffolds; Package and Article Carriers; Pneumatic Dispatch; Store Service; Mining, Quarrying, and Ice Harvesting.	Apr. 22	June 6	4,068
5. ROBINSON, C. W., Harvesters; Acoustics; Sound Recording; Knotters	Mar. 4	Mar. 11	2,379
6. SURLE, H., Carbon Chemistry (part)	†Mar. 22	†Feb. 12	1,835
7. HANLIN, GEORGE, Optics; Photographic Apparatus	†Apr. 21	†Jan. 22	1,828
8. IMUS, A. E., Furniture; Racks and Cabinets	May 16	May 13	4,050
9. BENSON, R. B., Pumps and Fans; Fluid and Fluid-Current Motors	July 12	Apr. 10	2,377
10. ANDRUS, L. M., Radiant Energy (part, e. g., Portable Radio Sets, Radio Accessories, Detectors, Oscillation Generators, Wave Meters, Tuners); music; Modulators; Piezo-electric Crystals.	†May 20	†Feb. 27	857
11. BENHAM, E. V., Boots, Shoes, and Leggings; Button, Eyelet, and Rivet Setting; Harness; Leather Manufactures; Nailing and Stapling; Whip Apparatus.	†May 15	†May 22	840
12. SPINTMAN, S., Machine Elements (part); Engine Starters: Motor Control with Clutch or Brake; Transmission with Clutch or Brake.	†Jan. 24	June 14	1,935
13. BEALL, T. E., Gear Cutting, Milling, Planing, Metal Working (part); Needle and Pin Making; Turning	Apr. 27	Apr. 6	2,475
14. FREEHOF, H. B., Metal Working (Bending; Sheet-Metal; Wire; Misc. Processes); Wire Fabrics; Farriery	†Mar. 10	Nov. 15	1,180
15. HENKIN, B., Plastics; Plastic Block and Earthenware Apparatus; Glass	Sept. 26	Mar. 14	1,978
16. LOVEWELL, N. N., Telegraphy; Telephony	†May 2	Oct. 4	1,865
17. HABECKER, LEON B., Paper Manufactures; Typewriters; Printing; Type Casting and Setting; Sheet Material Associating or Folding; Sheet or Web Feeding.	Sept. 21	May 9	1,817
18. KURZ, J. A., Motors, Expansible-Chamber Type; Power Plants; Speed Responsive Devices; Rotary Internal-Combustion Engines.	Aug. 15	Apr. 12	1,709
19. PATRICK, P. L., Liquid and Gaseous Fuel Burners; Stoves and Furnaces	Aug. 23	July 17	1,940
20. BROWN, L. M., Miscellaneous Hardware; Closure Fasteners; Locks; Undertaking; Bread, Pastry, and Confection Making; Bank Protection; Safes; Tents, Canopies, Umbrellas and Canes.	June 8	June 12	2,097
21. MADER, R. C., Textiles	†Apr. 12	†Jan. 2	1,185
22. CARPENTER, B. H., Aeronautics; Firearms; Ordnance	Aug. 16	June 26	1,898
23. LEWIS, J. B., Cash Registers; Calculators and Counters; Education	June 25	May 7	1,315
24. LUSBY, CHARLES, Apparel; Apparel Apparatus; Sewing Machines	†Apr. 15	†Apr. 19	1,849
25. BLAKELY, C. F., Classifying Solids; Centrifugal-Bowl Separators; Mills; Threshing; Vegetable and Meat Cutters and Comminutors; Distillation.	†Jan. 31	June 11	1,750
26. YOUNG, R. R., Electricity—Generation and Motive Power	†Jan. 10	May 21	1,546
27. JAMES, S., Brushing, Scrubbing; Fluid Treatment of Textiles (Apparatus); Liquid Treatment of Solids; General Cleaning; Ironing; Brush, Broom and Mop Making.	Dec. 16	Aug. 23	3,016
28. SOLYOM, H. L., Heating, Metallurgical Apparatus; Internal-Combustion Engines (part); Cylinders; Pistons	†Jan. 8	Sept. 13	1,220
29. SHKLARIN, J. B., Baggage; Cloth, Leather, and Rubber Receptacles; Button Making; Woodworking; Tools	Oct. 10	June 5	2,932
30. BISHOFF, A., Automatic Temperature and Humidity Regulation; Illumination; Thermostats and Humidostats; Heating Systems; Ammunition and Explosive Devices.	†Feb. 7	Aug. 2	2,382
31. DUNCOMBE, C. S., Mineral Oils; Carbocyclic or Acyclic Carbon Compounds (part)—e. g., Ketones, Aldehydes, Ethers, Hydroxy Compounds, Hydrocarbons, Halogenated Hydrocarbons.	†Apr. 30	†Apr. 22	2,118
32. LESH, KARL R., Gas and Liquid Contact Apparatus; Heat Exchange; Gas Separation; Agitating; Wells; Earth Boring.	Apr. 6	Apr. 24	2,880
33. KAUFFMAN, H. E., Bridges; Hydraulic and Earth Engineering; Building Structures; Roads and Pavements	May 6	Apr. 6	3,470
34. SAPERSTEIN, S., Electricity—Transmission to Vehicles; Railways; Track Sanders; Signals and Indicators	July 10	Apr. 3	1,355
35. BROMLEY, E. D., Card and Sign Exhibiting; Dispensing; Filling and Closing Portable Receptacles; Ammunition and Explosive Charge Making.	Aug. 10	June 23	2,848
36. McFADYEN, A. D., Automatic Weighers; Measuring and Testing; Force Measuring	Apr. 5	Mar. 21	2,034
37. WEAVER, M. E., Electricity, Circuit Makers and Breakers	Sept. 23	Sept. 11	1,533
38. ARNOLD, D., Coating Processes and Apparatus; Coating or Plastic Compositions (part); Rubber	Oct. 10	Sept. 12	1,699
39. WHITNEY, F. L., Fluid-Pressure Regulators; Valves; Water Distribution	Apr. 11	Mar. 5	2,844
40. DRUMMOND, E. J., Receptacles (part); Packages	†Feb. 10	Aug. 8	3,034
41. HERTZ, M., Recorders; Check-controlled Apparatus; Coin Handling; Article Dispensing Cabinets; Deposit Receptacles; Buckles, Buttons, Clasps.	Apr. 1	Mar. 6	2,724
42. MARANS, H., Electric Signaling; Variable Transformer and Reactor Structure; Electricity, Voltage Magnitude and Phase Control Systems.	†Apr. 19	†May 20	882
43. STONE, I. G., Medicines, Poisons and Cosmetics; Explosive Compositions; Sugar and Starch; Bleaching and Dyeing; Fluid Treatment of Textiles; Hides, Skins and Leathers.	†Mar. 8	†Apr. 16	1,479
44. HARVEY, L. P., Refrigeration; Preserving	Mar. 23	Apr. 18	1,310
45. MANTER, W. B., Shafting and Flexible Shaft Couplings; Wheels, Tires, Axles and Wheel Substitutes; Lubrication; Bearings and Guides; Belt and Sprocket Gearing; Spring Devices; Land Vehicles (part); Spring, Weight and Horsepower Motors.	June 6	Mar. 25	2,844
46. MUSHAKE, W. I., Concentrating Evaporators; Fluid Sprinkling, Spraying and Diffusing; Fire Extinguishers, Liquid Heaters and Vaporizers; Kitchen and Table Articles.	Aug. 2	June 4	1,845

NOTE.—The dates given are 1946 except where † indicates 1947.

(Total number of applications awaiting action, excluding Trade-Mark Division, 153,156; Trade-Mark Division, 32,271. Oldest new case, Mar. 4, 1946; oldest amended, Jan. 25, 1946.)

DIVISIONS, EXAMINERS, AND SUBJECTS OF INVENTIONS	Oldest new application awaiting office action	Oldest amended application awaiting office action	Applications awaiting action
	New	Amended	
47. KANOF, WM. J., Motor Vehicles; Land Vehicles (part); Fluid Pressure Brakes	†Feb. 20	Oct. 19	1,946
48. BERNSTEIN, S., Electricity, General Applications; Electric Igniters	July 24	June 3	1,596
49. SHEFFIELD, E. L., Drying and Gas or Vapor Contact with Solids; Ventilation; Liquid Separation or Purification.	†Jan. 17	July 11	1,665
50. LEVIN, SAMUEL, Synthetic Resins	†Apr. 5	Oct. 19	2,366
51. FRIEDMAN, M. H., Radiant Energy (part, e. g. Radio Transmission and Reception, Transmitters, Receivers, Antennae); Radiant Energy Communications.	†Mar. 1	Aug. 30	1,891
52. KNOTTS, M. K., Supports; Chucks; Joint Packing; Pipe and Rod Joints or Couplings; Tool-Handle Fastenings; Pipes and Tubular Conduits.	†Jan. 2	July 17	3,875
53. BRINDISI, M. V., Label Pasting and Paper Hanging; Book Making; Manifolding; Printed Matter; Stationery; Paper Files and Binders; Cutlery; Closures, Partitions and Panels, Flexible and Portable.	July 3	Mar. 6	3,602
54. STRAOHAN, O. W., Electric Lamp and Discharge Devices, Systems, Structure, Manufacture and Repair; Light Sensitive Circuits; Ray Energy Applications.	†Mar. 26	Nov. 6	1,926
55. BOWEN, S. T., Artificial Body Members; Dentistry; Surgery; Toilet	†Jan. 7	Apr. 5	1,846
56. COCKERILL, S., Electrical and Wave Energy Chemistry; Paper Making; Acetylene; Gas Mixing	†Apr. 11	†Mar. 1	1,155
57. NICOLSON, G. D., Toys; Amusement and Exercising Devices; Cutting and Punching; Bolt, Nut, Rivet, Nail, Screw, Chain, and Horseshoe Making; Driven and Screw Fastenings; Jewelry; Nut and Bolt Locks.	May 17	May 1	3,558
58. DQWELL, E. F., Abrading; Bottles and Jars; Stone Working; Making Metal Tools and Implements	†Feb. 8	June 24	1,355
59. SHEPARD, P. W., Chemistry; Fertilizers; Gas, Heating and Illuminating; Heterocyclic Compounds (part)	July 2	May 6	2,124
60. GLASS, R. L., Electricity—Heating; Welding; Furnaces; Battery Charging and Discharging; Consumable Electrode Lamp and Discharge Devices; Resistances and Rheostats; Prime Mover Dynamo Plants.	†Apr. 22	Oct. 21	1,505
61. LANNAN, J., Winding and Reeling; Pushing and Pulling; Horology; Time-Controlling Apparatus; Railway Mail Delivery; Boats, Buoys, Ships and Marine Propulsion.	Aug. 7	May 1	3,202
62. PUGH, E. C., Games; Tables; Mechanical Guns and Projectors	Oct. 18	May 28	1,477
63. WINKELSTEIN, A. H., Fermentation; Foods and Beverages; Heterocyclic Compounds (part); Oils and Fats.	†Mar. 28	†Feb. 5	1,539
64. NASH, P. M., Compositions—Coating or Plastic (part); Fuel and Miscellaneous	†June 25	†June 14	1,531
65. McDERMOTT, F. P., Batteries: Electrical Conductors, Conduits, Insulators and Connectors	†Apr. 16	Dec. 4	1,149
66. LISANN, I., Geometrical Instruments	Apr. 19	Jan. 25	2,257
67. KRAFFT, C. F., Laminated Fabrics; Photographic Processes and Products; Ornamentation	Aug. 21	June 19	2,066
68. BERMAN, H., Brakes, Boring and Drilling; Clutches and Power Stop Control	†Mar. 1	Oct. 12	1,599
69. GALVIN, D. J., Electricity—Wave Transmission, Repeaters and Relays (e. g., Amplifiers), Galvanometers and Meters.	Oct. 17	May 10	1,006
TRADE-MARKS: MERCHANT, J. H	July 5	Aug. 9	32,271
DESIGNS: BREHM, G. L	July 5	Aug. 29	8,152

NOTE.—The dates given are 1946 except where † indicates 1947.

LIST OF TRADE-MARK APPLICANTS

PUBLISHED FOR OPPOSITION

Abbott Laboratories, North Chicago, Ill. Multiple vitamin preparation. Serial No. 531,572, Mar. 2. Class 6.

Acme Aluminum Alloys, Inc., Dayton, Ohio. Metallic products. Serial No. 508,084, Mar. 2. Class 14.

Acme Aluminum Alloys, Inc., Dayton, Ohio. Metallic products. Serial No. 508,086, Mar. 2. Class 14.

Adco, Inc., Sedalia, Mo. Product for deodorizing and perfuming interior spaces. Serial No. 510,636, Mar. 2. Class 6.

Adventure Co.: *See*—
La Venture, Wm. L.

Ainsworth, Wm., & Sons, Inc., Denver, Colo. Beam balances, parts and accessories, balance weights, etc Serial No. 485,319, Mar. 2. Class 26.

American Cyanamid Company, New York, N. Y. Synthetic organic chemical. Serial No. 533,291, Mar. 2. Class 6.

American Cyanamid Company, New York, N. Y. Parathion in wettable powder, dust aerosol emulsion or solution form. Serial No. 535,363, Mar. 2. Class 6.

American Industries, Incorporated, Hartford, Conn. Kerosene-fired cook stoves, range oil burners, power oil burners, etc. Serial No. 520,671, Mar. 2. Class 34.

American Leather Novelty Corporation, Jersey City, N. J. Wallets, key cases, purses, etc. Serial No. 501,302, Mar. 2. Class 3.

American Oak Leather Co., Cincinnati, Ohio. Leather. Serial No. 525,174, Mar. 2. Class 1.

American Thread Company, The, New York, N. Y. Thread and yarn. Serial Nos. 531,181–2, Mar. 2. Class 43.

Armstrong, James A., Rocky River, Ohio. Hair waving kits. Serial No. 512,312, Mar. 2. Class 50.

Atlas Powder Company, Wilmington, Del. Emulsifying agents in the nature of polyoxyethylene derivatives of fatty acids derived from fat or oils. Serial No. 516,884, Mar. 2. Class 46.

B. C. Remedy Company, Durham, N. C. Remedy for headache and neuralgia. Serial No. 536,035, Mar. 2. Class 6.

B & W Fruit Company, Inc., Groveland, Fla. Canned citrus juices. Serial No. 505,388, Mar. 2. Class 46.

Baby Bleach Corp., Milwaukee, Wis. Disinfecting and deodorizing bleach. Serial No. 508,960, Mar. 2. Class 6.

Bayisank Pharmaceuticals, Inc., New York, N. Y. Nasal solution. Serial No. 529,546, Mar. 2. Class 6.

Bell Bedspreads, Inc., New York, N. Y. Bedspreads. Serial No. 502,681, Mar. 2. Class 42.

Bendel, Henri, Inc., New York, N. Y. Girls', misses' and women's coats, suits, dresses, etc. Serial No. 508,964, Mar. 2. Class 39.

Binzer, Harry, Terre Haute, Ind. Deep fat fried wienerwurst. Serial No. 505,796, Mar. 2. Class 46.

Blanke-Baer Extract & Preserving Company, St. Louis, Mo. Flavoring extracts and fountain syrups. Serial No. 527,416, Mar. 2. Class 45.

Bode, Joe C., Jr., doing business as Manson Distributors, Aurora, Ill. Preparation in stick form used in the treatment of minor skin ailments. Serial No. 530,716, Mar. 2. Class 6.

Bowman, A. Smith, Jr., assignee et al.: *See*—
Bowman, Abram S.

Bowman, A. Smith, Distillery: *See*—
Bowman, Abram S.

Bowman, Abram S., doing business as A. Smith Bowman Distillery, assignor to A. S., E. D., and A. S. Bowman, Jr., doing business as A. Smith Bowman Distillery, Sunset Hills, Va. Whiskey. Serial No. 497,774, Mar. 2. Class 49.

Bowman, E. DeLong, assignee et al.: *See*—
Bowman, Abram S.

Bowman, Smith A., assignee et al.: *See*—
Bowman, Abram S.

Boyle Leather Goods Co., Inc., New York, N. Y. Wardrobe travelling bags, wardrobe trunks, suit cases, etc. Serial No. 531,297, Mar. 2. Class 3.

Boyle Leather Goods Co. Inc., New York, N. Y. Wardrobe travelling bags and wardrobe trunks. Serial No. 531,298, Mar. 2. Class 3.

Boyle Leather Goods Co. Inc., New York, N. Y. Wardrobe travelling bags, wardrobe trunks, suit cases, etc. Serial Nos. 531,299–301, Mar. 2. Class 3.

Buckeye Glove Co., Toledo, Ohio. Work gloves of fabric, leather, and combinations thereof. Serial No. 535,473, Mar. 2. Class 39.

Buckeye Glove Co., Toledo, Ohio. Work gloves of fabric, leather and combinations thereof. Serial Nos. 535,477–8, Mar. 2. Class 39.

Burlington Mills, Inc., Burlington, Wis. Collar pads, saddle pads and housings. Serial No. 530,617, Mar. 2. Class 3.

Burt, Eugene, Company, Kansas City, Mo. Scalp and hair tonic. Serial No. 528,553, Mar. 2. Class 6.

C. & D. Prescription Pharmacy, Texas City, Tex. Preparation used in the treatment of colds and fever, and an ointment. Serial No. 517,161, Mar. 2. Class 6.

California Ink Company, Inc., The, San Francisco, Calif. Inks. Serial No. 537,412, Mar. 2. Class 11.

Cello-Masters, Incorporated, New York, N. Y. Cellophane and cellulose acetate bags. Serial No. 522,379, Mar. 2. Class 2.

Champion Paper and Fibre Company, The, Hamilton, Ohio. Mixture of chestnut wood and pine bark tannins. Serial No. 527,791, Mar. 2. Class 6.

Chemical Corporation of America, Los Angeles, Calif. Lubricating oil. Serial No. 507,968, Mar. 2. Class 15.

Climax Industries, Inc., Cleveland, Ohio. Preparation for cleaning wallpaper. Serial No. 529,367, Mar. 2. Class 4.

Coachella Valley Grape Growers Association Inc., Coachella, Calif. Fresh grapes. Serial No. 514,011, Mar. 2. Class 46.

Codo Manufacturing Corp., Coraopolis, Pa., and Chicago, Ill. Carbon paper. Serial No. 523,241, Mar. 2. Class 11.

Columbia Ribbon & Carbon Manufacturing Company, Inc., Glen Cove, N. Y. Carbon paper. Serial Nos. 535,303–4, Mar. 2. Class 11.

Corman & Wasserman, assignor to Corman & Wasserman, Inc., Baltimore, Md. Men's slacks and slacks and shirt ensembles. Serial No. 528,112, Mar. 2. Class 39.

Corman & Wasserman, Inc., assignee: *See*—
Corman & Wasserman.

De Luxe Girdlecraft Co. Inc., New York, N. Y. Maternity belts made of satin elastic material. Serial No. 534,756, Mar. 2. Class 39.

Diamond Case Co. Inc., New York, N. Y. Luggage. Serial No. 531,451, Mar. 2. Class 3.

Diversey Corporation, The, Chicago, Ill. Insecticide. Serial No. 514,528, Mar. 2. Class 6.

Diversey Corporation, The, Chicago, Ill. Scale and milkstone deposit remover in powdered form. Serial No. 531,778, Mar. 2. Class 4.

Eagle-Ottawa Leather Company, Grand Haven, Mich. Leather. Serial No. 522,856, Mar. 2. Class 1.

Eagle-Ottawa Leather Company, Grand Haven, Mich. Leather. Serial Nos. 522,860–1, Mar. 2. Class 1.

Edmilton Corporation, Ridgefield, Conn. Perfume dispensers. Serial No. 517,838, Mar. 2. Class 2.

Elbon Laboratories, The: *See*—
McNulty, William J.

Evans, Case Co., North Attleboro, Mass. Handbags. Serial No. 530,487, Mar. 2. Class 3.

Firestone Tire & Rubber Company, Akron, Ohio. Knitted, netted, and textile fabrics. Serial Nos. 495,020–1, Mar. 2. Class 42.

Forse Corporation, Anderson, Ind. Steam and air pressing machines. Serial No. 516,181, Mar. 2. Class 24.

French Art Silk Creations Co.: *See*—
Tardy, Suzanne.

Geigy Company, Inc., New York, N. Y. Insecticides. Serial No. 529,890, Mar. 2. Class 6.

Geigy Company, Inc., New York, N. Y. Insecticides. Serial No. 534,430, Mar. 2. Class 6.

General Dyestuff Corporation, New York, N. Y. Emulsifying agents. Serial No. 511,079, Mar. 2. Class 6.

Gorton, Slade, Company: *See*—
Gorton, Thomas S., Jr.

Gorton, Thomas S., Jr., doing business as Slade Gorton Company, Chicago, Ill. Frozen fish, smoked and frozen shrimp. Serial No. 514,273, Mar. 2. Class 46.

Graff, George B., Company, Cambridge, Mass. Paper clips, file-signals, and index tabs. Serial No. 527,030, Mar. 2. Class 37.

Great Atlantic & Pacific Tea Company, The, New York, N. Y. Dried apricots, peaches, prunes, etc. Serial No. 528,274, Mar. 2. Class 46.

Great Atlantic & Pacific Tea Company, The, New York, N. Y. Canned tomatoes, red beans, red kidney beans, etc. Serial No. 528,276, Mar. 2. Class 46.

Sterile injectible solution and/or microsuspension of crystalline progesterone. S. F. Durst & Co., Inc. 436,996, Mar. 2; Serial No. 520,151, published Dec. 2, 1947.
Toilet water, perfume, face powder, etc. H. D. Koenig. 436,938, Mar. 2; Serial No. 514,046, published Nov. 11, 1947.
Tonic, Lung. Owbridge, Limited. 66,650, re-renewed Dec. 17, 1947. O. G. Mar. 2.
Tonic, medicine for diseases of the nervous system, etc., General. Smith, Kline & French Laboratories. 436,908, Mar. 2; Serial No. 509,610, published Dec. 2, 1947.
Tonics, stimulators, and treatments for the scalp and hair. Carl Brandenfels, Inc. 436,918, Mar. 2; Serial No. 511,198, published Dec. 2, 1947.
Vitamin-bearing dietary food supplement. Lo-Calory Food Corporation. 437,015, Mar. 2; Serial No. 521,527, published Dec. 2, 1947.
Vitamin preparation. Specifide, Inc. 436,980, Mar. 2; Serial No. 518,917, published Nov. 18, 1947.

CLASS 8

Pipes, Briar. G. Khoubesser. 436,975, Mar. 2; Serial No. 518,534, published Nov. 25, 1947.
Pipes, Smoker's. Empire Briar Pipe Co., Inc. 436,849, Mar. 2; Serial No. 473,774, published Sept. 9, 1947.
Pipes, Tobacco. Robert Sinclair Tobacco Company, Limited. 436,939, Mar. 2; Serial No. 514,141, published Dec. 2, 1947.
Pouches, cigarette cases, and cigar cases, Tobacco. Hookless Fastener Company. 270,090, Apr. 29, 1930. Republished Mar. 2.
Pouches, cigarette cases, and cigar cases, Tobacco. Hookless Fastener Company. 270,509, May 6, 1930. Republished Mar. 2.

CLASS 9

Dynamite, Nitroglycerin. Potts Powder Company. 68,557, re-renewed Apr. 14, 1948. O. G. Mar. 2.

CLASS 10

Fertilizer. Synthetic Nitrogen Products Corporation. 244,000, July 3, 1928. Republished Mar. 2.

CLASS 11

Paper, Carbon. Neidich Process Company. 235,308, renewed Nov. 15, 1947. O. G. Mar. 2.

CLASS 12

Boards or sheets. Armstrong Cork & Insulation Company. 250,503, Dec. 11, 1928. Republished Mar. 2.
Boards, Rough and dressed lumber. W. M. Ritter Lumber Company. 268,022, Mar. 4, 1930. Republished Mar. 2.
Cement colors. Builder's Specialty Co., Inc. 232,170, renewed Sept. 6, 1947. O. G. Mar. 2.
Composition building materials. Continental Building Specialties. 246,880, Sept. 18, 1928. Republished Mar. 2.
Doors, Interior and exterior admission. Reliance Art Metal Company. 437,063, Mar. 2.
Forms for concrete construction. Soulé Steel Company. 273,177, July 22, 1930. Republished Mar. 2.
Insulating and building materials, Thermal and sound. Owens-Illinois Glass Company. 421,786, July 18, 1946. Republished Mar. 2.
Lime. Woodville Lime Products Company. 233,049–50, renewed Sept. 20, 1947. O. G. Mar. 2.
Lumber, Rough and dressed. W. M. Ritter Lumber Company. 267,986, Mar. 4, 1930. Republished Mar. 2.
Lumber, Rough and dressed. W. M. Ritter Lumber Company. 268,023, Mar. 4, 1930. Republished Mar. 2.
Lumber, Rough and dressed. W. M. Ritter Lumber Company. 272,550, July 8, 1930. Republished Mar. 2.
Plaster board, wall board, and composition board. Schumacher Wall Board Corporation. 235,372, renewed Nov. 15, 1947. O. G. Mar. 2.
Sheet-metal units, Hollow. Gross Metal Products Company. 261,928, Sept. 24, 1929. Republished Mar. 2.

CLASS 13

Automatic separators. Leavitt Machine Company. 437,068, Mar. 2.
Enameled ware. Columbian Enameling & Stamping Co. 269,510, Apr. 8, 1930. Republished Mar. 2.
Fasteners, Separable. Hookless Fastener Company. 250,113, Nov. 27, 1928. Republished Mar. 2.
Fasteners, Separable. Hookless Fastener Company. 271,179, Mar. 27, 1930. Republished Mar. 2.
Hinges. Chicago Spring Hinge Company. 212,396, May 4, 1926. Republished Mar. 2.
Nails. Crescent Brass & Pin Company. 272,503, July 8, 1930. Republished Mar. 2.
Rivets. Bendix Brake Company. 273,981, Aug. 19, 1930. Republished Mar. 2.
Slider and wheels for furniture casters. Bassick Company. 240,590, renewed Apr. 3, 1948. O. G. Mar. 2.
Tire chains, Automobile. Pyrene Manufacturing Company. 235,596, renewed Nov. 22, 1947. O. G. Mar. 2.

CLASS 14

Bronze, Phosphor. Magnolia Metal Company. 259,359, July 30, 1929. Republished Mar. 2.
Lead and alloys. Bearium Bearings, Inc. 241,054, renewed Apr. 17, 1948. O. G. Mar. 2.
Lead and alloys used for bearing and packing metals. Bearium Bearings, Inc. 240,220, renewed Mar. 20, 1948. O. G. Mar. 2.
Metal castings. Robbins & Myers, Inc. 269,545, Apr. 8, 1930. Republished Mar. 2.
Metal sheets and rods, Unfinished or partly finished nonferrous. R. D. Werner Co., Inc. 437,062, Mar. 2.
Metals, antifriction metals, and metallic alloys, Babbitt. Magnolia Metal Company. 273,185, July 22, 1930. Republished Mar. 2.

Rail anchors and rail joint shims. American Fork and Hoe Company. 258,575, July 9, 1929. Republished Mar. 2.
Steel, Tool. Kloster Steel Corporation. 235,975, renewed Nov. 29, 1947. O. G. Mar. 2.
Steel, Tool. Kloster Steel Corporation. 252,027, Jan. 22, 1929. Republished Mar. 2.
Steels, alloy steels, and carbon tool steels, High-speed. Vanadium-Alloys Steel Company. 237,018, renewed Jan. 3, 1948. O. G. Mar. 2.
Wire, sheets, tubes, rods and special shapes and ingots made of bronze. American Brass Company. 239,610, renewed Mar. 6, 1948. O. G. Mar. 2.

CLASS 15

Gasoline. Chestnut & Smith Corporation. 235,487, renewed Nov. 22, 1947. O. G. Mar. 2.
Gasoline, lubricating oils and greases. Cities Service Oil Company. 236,786, renewed Dec. 20, 1947. O. G. Mar. 2.
Grease, Petroleum. Swan-Finch Oil Corporation. 239,059, renewed Feb. 21, 1948. O. G. Mar. 2.
Greases, Lubricating. Pure Oil Company. 252,484, Feb. 12, 1929. Republished Mar. 2.
Kerosene, gasoline, lubricating oils and greases. Cities Service Oil Company. 231,505, renewed Aug. 23, 1947. O. G. Mar. 2.
Oils, greases, and compounds, Lubricating. Jenkin-Guerin Oil Company. 269,882, Apr. 22, 1930. Republished Mar. 2.
Oils, Lubricating. Pure Oil Company. 243,822, July 3, 1928. Republished Mar. 2.
Oils, Lubricating. Pure Oil Company. 252,544–6, Feb. 12, 1929. Republished Mar. 2.
Oils, Lubricating. Pure Oil Company. 252,530, Feb. 12, 1929. Republished Mar. 2.
Oils, Lubricating. Pure Oil Company. 252,565, Feb. 12, 1929. Republished Mar. 2.
Oils, Lubricating. Pure Oil Company. 270,318, May 6, 1930. Republished Mar. 2.

CLASS 16

Enamel, Paint. Con-Ferro Paint & Varnish Company. 436,943, Mar. 2; Serial No. 514,577, published Oct. 14, 1947.
Painting-color and varnish. Firm of Gustav Briegleb. 30,076, re-renewed Mar. 25, 1947. O. G. Mar. 2.
Paints, varnishes, color, etc., Prepared and mixed. Thomson Wood Finishing Co. 68,484, re-renewed Apr. 14, 1948. O. G. Mar. 2.
Varnishes, enamels, and varnish-paints. Thomson Wood Finishing Co. 67,845, re-renewed Feb. 18, 1948. O. G. Mar. 2.
Wax preparation, Liquid. American Disinfecting Company. 252,967, Feb. 19, 1929. Republished Mar. 2.

CLASS 17

Cigars. Compania General de Tabacos de Filipinas. 240,270, renewed Mar. 20, 1948. O. G. Mar. 2.
Tobacco, Smoking and chewing. Gallaher Limited. 237,883, renewed Jan. 17, 1948. O. G. Mar. 2.
Tobacco, Smoking and/or chewing. Governor and Company of Adventurers of England Trading into Hudson's Bay. 296,152, July 26, 1932. Canceled Jan. 21, 1948. O. G. Mar. 2.

CLASS 19

Automobiles and motor trucks and structural parts thereof. International Harvester Company. 275,762, Sept. 30, 1930. Republished Mar. 2.
Bicycles. May Department Stores Company. 360,369, Sept. 13, 1938. Canceled Jan. 28, 1948. O. G. Mar. 2.
Brakes and brake systems and parts thereof. Bendix Brake Company. 258,394, July 9, 1929. Republished Mar. 2.
Springs, railway-car wheels and tires, etc., Railway-car. Railway Steel Spring Company. 68,223, re-renewed Mar. 17, 1948. O. G. Mar. 2.
Trucks and constructive parts thereof, Motor. Divco-Detroit Corporation. 248,683, Oct. 30, 1928. Republished Mar. 2.

CLASS 20

Covering, Floor. Paraffine Companies, Inc. 234,863, renewed Nov. 8, 1947. O. G. Mar. 2.
Coverings, Felt base floor. Armstrong Cork Company. 500,004, Mar. 2.

CLASS 21

Batteries, Wet storage. Globe-Union Mfg. Co. 271,944, June 17, 1930. Republished Mar. 2.
Blowers, suction cleaners, and sprayers, Electrically-driven portable electric. Breuer Electric Mfg. Co. 246,727, Sept. 11, 1928. Republished Mar. 2.
Electrical lamps, torchères and candelabra. Crest Company. 236,711, renewed Dec. 20, 1947. O. G. Mar. 2.
Electrical lighters and dispensers, Automatic. American Metal Products Corporation. 241,892, renewed May 8, 1948. O. G. Mar. 2.
Fans, Electric. Robbins & Myers, Inc. 260,760, Aug. 27, 1929. Republished Mar. 2.
Lamps, torchères, and candelabra, Electrical. Crest Company. 234,588, renewed Nov. 1, 1947. O. G. Mar. 2.
Switches, bus-bar clamps, bus supports, etc. Electric Power Equipment Corporation. 238,412, renewed Feb. 7, 1948. O. G. Mar. 2.
Switches, Thermally-operated electric cut-out. Minneapolis-Heat Regulator Company. 241,954, May 8, 1928. Republished Mar. 2.
Switches, Thermally-operated electric cut-out. Minneapolis-Honeywell Regulator Company. 271,566, June 10, 1930. Republished Mar. 2.

CLASS 22

Balls, Golf. Worthington Ball Company. 270,844–7, May 13, 1930. Republished Mar. 2.
Bridge sets, tennis racket covers, and golf bags. Hookless Fastener Company. 271,679–80, June 17, 1930. Republished Mar. 2.

CLASS 23

Axes, scythes, hatchets, etc. American Axe and Tool Company. 164,880, Feb. 27, 1923. Republished Mar. 2.
Blades, Cutter. E. C. Atkins and Company. 283,211, May 19, 1931. Republished Mar. 2.
Cultivators, seeders, forks, etc. American Fork and Hoe Company. 260,024, Aug. 13, 1929. Republished Mar. 2.
Drives and parts of drives. Eclipse Machine Company. 169,006, renewed Jan. 5, 1948. O. G. Mar. 2.
Dyeing machinery. E. A. Stienen. 437,076, Mar. 2.
Files. E. C. Atkins and Company. 255,151, Apr. 16, 1929. Republished Mar. 2.
Grinders and parts thereof, Portable and flexible shaft bench. Keller Mechanical Engineering Corporation. 271,015, May 20, 1930. Republished Mar. 2.
Grinders, Feed. Western Land Roller Company. 278,343, Dec. 16, 1930. Republished Mar. 2.
Grinding machines and parts thereof. Carborundum Company. 267,942, Mar. 4, 1930. Republished Mar. 2.
Hammers. Kelly Axe Manufacturing Company. 175,128, Oct. 30, 1923. Republished Mar. 2.
Handles, handsaws, crosscut saws, etc., Handsaw. E. C. Atkins and Company. 271,387, June 3, 1930. Republished Mar. 2.
Knitting machines. Wildt and Company, Limited. 437,061, Mar. 2.
Knives, Machine. E. C. Atkins and Company. 229,630, July 5, 1927. Republished Mar. 2.
Machinery and parts of machinery. Taylor, Stiles & Company. 63,869, re-renewed July 9, 1947. O. G. Mar. 2.
Machines, Precision grinding. Heald Machine Company. 248,760, Oct. 30, 1928. Republished Mar. 2.
Pumps, Irrigation and drainage. M. L. Van Ness. 437,067, Mar. 2.
Pumps, well-pump parts and fittings, etc., Well. D. & B. Pump and Supply Co. 204,079, Oct. 6, 1925. Republished Mar. 2.
Rollers, Land. Western Land Roller Company. 272,617, July 8, 1930. Republished Mar. 2.
Saws, Cross cut. E. C. Atkins and Company. 242,812, June 5, 1928. Republished Mar. 2.
Sewing machines, overseaming and crochet sewing machines. Merrow Machine Company. 151,396, renewed Jan. 5, 1948. O. G. Mar. 2.
Shovels and spades. Skelton Shovel Co., Inc. 252,390, Feb. 5, 1929. Republished Mar. 2.
Sprayers and parts thereof, Hand-operated portable. Hudson Manufacturing Co. 232,872–3, renewed Sept. 20, 1947. O. G. Mar. 2.
Sprayers and parts thereof, Hand-operated portable. Hudson Manufacturing Co. 232,943, renewed Sept. 20, 1947. O. G. Mar. 2.
Tools, Automotive maintenance. Automotive Maintenance Machinery Co. 282,012–13, Apr. 7, 1931. Republished Mar. 2.
Typewriting machines and typewriting-machine parts. Underwood Typewriter Company. 68,628, re-renewed Apr. 21, 1948. O. G. Mar. 2.
Wrenches and pliers. Crescent Tool Company. 67,460, re-renewed Feb. 4, 1948. O. G. Mar. 2.

CLASS 24

Washers and extractors, Clothes. Waterway Company. 436,956, Mar. 2; Serial No. 515,923, published Nov. 11, 1947.

CLASS 25

Safes, filing safes, note cases, etc. General Fireproofing Company. 273,959, Aug. 19, 1930. Republished Mar. 2.

CLASS 26

Calculating machines. Reliable Typewriter & Adding Machine Corporation. 244,386, July 17, 1928. Republished Mar. 2.
Calculating machines. Reliable Typewriter & Adding Machine Corporation. 252,921, Feb. 19, 1929. Republished Mar. 2.
Glass funnels. Kimble Glass Company. 377,989, May 21, 1940. Republished Mar. 2.
Glassware, Chemical and laboratory. Kimble Glass Company. 393,743, Mar. 3, 1942. Republished Mar. 2.

Glassware, Chemical, scientific, and laboratory. Kimble Glass Company. 379,844, July 30, 1940. Republished Mar. 2.
Glassware, Chemical, scientific, and laboratory. Kimble Glass Company. 381,836, Oct. 8, 1940. Republished Mar. 2.
Glassware, Laboratory. Kimble Glass Company. 311,933, Apr. 10, 1934. Republished Mar. 2.
Hydrometers. Kimble Glass Company. 384,792, Feb. 4, 1941. Republished Mar. 2.
Plates and photo films, Printing. Jeffery White Studio, Inc. 231,306, renewed Aug. 16, 1947. O. G. Mar. 2.
Printing, registering, and issuing machines, Ticket. Automatic Ticket Register Corporation. 234,624, renewed Nov. 1, 1947. O. G. Mar. 2.

CLASS 27

Watches and clocks. Robt. H. Ingersoll & Bro. 89,265, Dec. 3, 1912. Corrected. O. G. Mar. 2.
Watches and clocks. Robt. H. Ingersoll & Bro. 93,997, Oct. 28, 1913. Corrected. O. G. Mar. 2.

CLASS 28

Bracelets, necklaces, and earrings. S. M. Schwarzschild. 436,855, Mar. 2; Serial No. 488,053, published Dec. 2, 1947.
Forks, knives, spoons, etc. Ellmore Silver Co., Inc. 437,033, Mar. 2; Serial No. 523,046, published Dec. 9, 1947.
Forks, knives, spoons, etc. Ellmore Silver Co., Inc. 437,040–1, Mar. 2; Serial Nos. 523,888–89, published Dec. 9, 1947.
Jewelry. Freeman-Daughaday Company. 436,904, Mar. 2; Serial No. 507,355, published Dec. 2, 1947.
Jewelry. Goldberg-Kirschman Company. 436,865, Mar. 2; Serial No. 493,952, published Dec. 2, 1947.

CLASS 29

Brushes. Holton & Adams. 66,951, re-renewed Jan. 7, 1948. O. G. Mar. 2.
Brushes. Sanitax Brush Company. 259,164, July 23, 1929. Republished Mar. 2.
Toothbrushes. Owens Staple-Tied Brush Company. 386,790–2, Apr. 22, 1941. Republished Mar. 2.
Toothbrushes. Owens Staple-Tied Brush Company. 388,622, July 1, 1941. Republished Mar. 2.

CLASS 30

Articles made of ceramic materials. Poor & Company. 436,934, Mar. 2; Serial No. 513,981, published Nov. 25, 1947.
Chinaware. Sigma Nu Fraternity. 437,035, Mar. 2; Serial No. 523,425, published Nov. 25, 1947.
Chinaware. Sigma Nu Fraternity. 437,059–60, Mar. 2; Serial Nos. 526,301–2, published Dec. 2, 1947.

CLASS 32

Bedroom suites, dining room suites, living room furniture, etc. Plymouth Wholesale Dry Goods Corporation. 436,961, Mar. 2; Serial No. 516,502, published Oct. 28, 1947.
Bed-springs, mattresses, and pillows. Charles P. Rogers & Co., Inc. 436,852, Mar. 2; Serial No. 479,093, published Nov. 25, 1947.
Bookcases, legal-blank cases, etc. Globe-Wernicke Company. 63,441–2, June 18, 1907. Republished Mar. 2.
Davenports, both sectional and stationary, with matching chairs, upholstered occasional chairs, etc. American Chair Company. 437,064, Mar. 2.
Ferneries, ornamental chairs, benches, etc. Crest Company. 238,017, renewed Jan. 24, 1948. O. G. Mar. 2.
Pillows. P. Gordon. 437,018, Mar. 2; Serial No. 521,735, published Nov. 25, 1947.
Racks and revolving shelf units and cabinets, Revolving clothes. Hoosier Industries, Inc. 436,914, Mar. 2; Serial No. 510,690, published Nov. 18, 1947.

Sensel, Eugene E., and Beck.
Belfils, Georges, Belfort, France, assignor to General Electric Company. Electric control circuit. 2,437,066, Mar. 2.
Bell, Charles S., Oakley, near Aylesbury, England. Towed aircraft and towing the same. 2,436,988, Mar. 2.
Bell Telephone Laboratories, Incorporated, assignee: *See*—
Joel, Amos E., Jr.
Potter, Ralph K.
Ring, Douglas H.
Sharpless, William M.
Bell and Wallace Manufacturing Corporation, assignee: *See*—
Wallace, Walter E.
Bemis Bro. Bag Company, assignee: *See*—
Brady, Charles V., and Ottinger.
Bendix Aviation Corporation, assignee: *See*—
Cox, Parker G., and Hansen.
Noxon, Paul A.
Benjamin, Milton L., Shaker Heights, and F. E. Winnen, Cleveland, Ohio; said Winnen assignor to said Benjamin. Chuck. 2,436,848, Mar. 2.
Berg, Isadore A., Cincinnati, Ohio. Compressed cereal. 2,437,150, Mar. 2.
Berg, Otto G., Spokane, Wash. Blower. 2,437,183, Mar. 2.
Bergier, Jacques, A. Eskenazi, and A. Helbronner, Lyon, France; vested in the Attorney General of the United States. Automatic measurement of length by means of electrical impulses. 2,436,785, Mar. 2.
Biederman, Joseph B., Cincinnati, Ohio. Inhaler. 2,436,877, Mar. 2.
Biederman, Joseph B., Cincinnati, Ohio. Inhaler. 2,436,878, Mar. 2.
Billetter, Halton A., Youngstown, Ohio. Downward stroke air evacuating jar sealing apparatus. 2,436,849, Mar. 2.
Bingley, Frank J., assignor, by mesne assignments, to Philco Corporation, Philadelphia, Pa. Adjusting means for transmission lines. 2,437,067, Mar. 2.
Birdwell, Benjamin F., assignor to Porcelain Metals Corporation, Louisville, Ky. Drain connector for shower bath receptors. 2,437,068, Mar. 2.
Bjorksten, Johan: *See*—
Fiedler, Stuart O., and Bjorksten.
Bjorksten Research Laboratories, Inc., assignee: *See*—
Fiedler, Stuart O., and Bjorksten.
Black Rock Manufacturing Company, The, assignee: *See*—
Maquat, Lloyd E.
Blair, James W.: *See*—
Steinhoff, Gordon R., and Blair.
Boeing Airplane Company, assignee: *See*—
Steinhoff, Gordon R., and Blair.
Bonham, Albert W., Jr., Salt Lake City, Utah, assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis. Drive control mechanism for motor vehicles and detent device therefor. 2,436,912, Mar. 2.
Bonwitt, Wilhelm F., Mount Vernon, N. Y., assignor to Brundy Engineering Company, Inc. Aluminum connection parts treated with concentrated nitric acid. 2,437,220, Mar. 2.
Borg-Warner Corporation, assignee: *See*—
Nutt, Harold.
Revick, John D.
Zeidler, Reinhold C.
Bourland, Eli, Millbrae Highlands, assignor to Pacific Can Company, San Francisco, Calif. Continuous cooker-cooler drive. 2,436,913, Mar. 2.

Bowen, Edward L., McComb City, Miss. Air brake slack adjuster. 2,436,850, Mar. 2.

Boyar, Harry, Oak Park, assignor to Boyar-Schultz Corporation, Chicago, Ill. Knurling tool. 2,436,950, Mar. 2.

Boyar-Schultz Corporation, assignee: *See*—
Boyar, Harry.
Ross, Albert R.

Bracke, Oscar J. J., Antwerp, Belgium, assignor to International Standard Electric Corporation, New York, N. Y. Selector switch mounting for telecommunication systems. 2,436,786, Mar. 2.

Bradbury, Frederick G., assignee: *See*—
Frick, Albion N.

Brady, Charles V., and A. F. Ottinger, assignors to Bemis Bro. Bag Company, St. Louis, Mo. Labeled fabric bag and the like. 2,437,184, Mar. 2.

Brady, Charles V., and A. F. Ottinger, assignors to Bemis Bro. Bag Company, St. Louis, Mo. Making labeled bags and the like. 2,437,185, Mar. 2.

Braner, Henry J., assignor to The National Cash Register Company, Dayton, Ohio. Electric soldering apparatus. 2,437,151, Mar. 2.

Bray, Frederick H., assignor to Standard Telephones and Cables Limited, London, England. Arrangement for producing electric impulses. 2,436,787, Mar. 2.

Breisch, Edgar W., Edgewood, assignor to The Union Switch & Signal Company, Swissvale, Pa. Detachable electrical connector. 2,436,914, Mar. 2.

Bricout, Pierre, Senlis (Oise), France; vested in the Attorney General of the United States. Method and apparatus for curve distortion of alternating currents. 2,436,788, Mar. 2.

Bridges, John H., Paterson, N. J., assignor, by mesne assignments, to National Inventions Corporation. Luminescent tube system and apparatus. 2,436,951, Mar. 1.

Brown Instrument Company, The, assignee: *See*—
Moore, Coleman B.

Brownsey, Oscar, assignor to U. S. Slicing Machine Company, La Porte, Ind. Cleaning tool for food tendering machines. 2,437,069, Mar. 2.

Brundy Engineering Company, Inc., assignee: *See*—
Bonwitt, Wilhelm F.

Bryant, Leslie E., assignor to Nye-Wait Company, Inc., Auburn, N. Y. Portable loom creel and adjusting means therefor. 2,437,070, Mar. 2.

Buck, Leo F., Camden, N. J. Repair patch for garment pockets. 2,436,879, Mar. 2.

Buckbee-Mears Company, assignee: *See*—
Mears, Norman B.
Mears, Norman B., and Hofsapple.

Burgett, Lynn S., Euclid, assignor to The Clark Controller Company, Cleveland, Ohio. Electromagnetic brake mechanisms 2,436,880, Mar. 2.

Burleigh, Arthur C., Wellesley, Mass. Sanding or rubbing machine. 2,437,152, Mar. 2.

Businger, Albert, Basel, Switzerland, assignor to Hoffmann-La Roche Inc., Nutley, N. J. Bicyclic sulfur compounds and manufacture thereof. 2,436,851, Mar. 2.

Cahusac, Clarence N., Newark, and F. B. Allen, Verona, assignors to C-O-Two Fire Equipment Co., Newark, N. J. Multiple smoke detector. 2,437,071, Mar. 2.

Camloc Fastener Corporation, assignee: *See*—
Eisele, Karl.

Campbell, Norman H., Toronto, Ontario, Canada. Bag and bag handle construction. 2,437,072, Mar. 2.

Carlson, George, Bridgeport, Conn., assignor to General Electric Company. Electric cable clamp and box. 2,437,073, Mar. 2.

Carmichael, Robert, Lakewood, and A. W. Seidler, Cleveland, Ohio, assignors to National Carbon Company, Inc. Staked type shunt connection for carbon brushes. 2,436,852, Mar. 2.

Carnegie-Illinois Steel Corporation, assignee: *See*—
Collins, Tappan.

Case, Rogers, Orange, N. J. Wire-transposing device. 2,436,789, Mar. 2.

Cavanagh, John F.: *See*—
Kenney, George M., and Cavanagh.

Chapin, Harold E., Los Angeles, Calif. Bookmark. 2,437,074, Mar. 2.

Christensen, Harry E., San Francisco, Calif. Therapeutic apparatus. 2,437,016, Mar. 2.

Clark Controller Company, The, assignee: *See*—
Burgett, Lynn S.

Clark, Douglas C.: *See*—
Deschamps, Desire J., Clarke, and Ferguson.

Clayton, Benjamin, assignor, by mesne assignments, to B. Clayton, Houston, Tex., doing business as Refining Unincorporated. Glyceride oil refining with foots softening agent. 2,437,075, Mar. 2.

Clemens, Jerome H., Chicago, Ill. Crutch. 2,437,076, Mar. 2.

Cleveland Punch & Shear Works Company, The, assignee: *See*—
Longfield, William F.

Coffing, Frederick, Danville, Ill. Bedpan system. 2,436,915, Mar. 2.

Cohan, Alvin M., Tamaqua, Pa., assignor to Atlas Powder Company, Wilmington, Del. Electric fuse lighter. 2,437,153, Mar. 2.

Cole, Lyndon C., Cleveland, Ohio, assignor to H-P-M Development Corporation, Wilmington, Del. Hydraulic circuit for halting reciprocable rams. 2,437,077, Mar. 2.

Coleman, Edwin D., Maywood, Ill. Respiration apparatus. 2,436,853, Mar. 2.

Collins, Tappan, Pittsburgh, Pa., assignor to Carnegie-Illinois Steel Corporation. Grating and making the same. 2,437,186, Mar. 2.

Conkey, Edward L., Seneca Falls, N. Y. Machine tool attachment. 2,436,952, Mar. 2.

Consolidated Vultee Aircraft Corporation, assignee: *See*—
Salisbury, Robert H., and Oehser.

Continental Carbon Company, assignee: *See*—
Ivester, Cecil B.

Conyne, Richard F.: *See*—
Rothrock, David A., Jr., and Conyne.

Cooper, Benjamin, Jersey City, N. J. Adding machine. 2,436,790, Mar. 2.

Copeland, Frank B., assignor to The Joyce-Cridland Company, Dayton, Ohio. Adjustable fulcrum for lever mechanisms. 2,436,916, Mar. 2.

Corey, James J., Jackson Heights, N. Y. Compressor. 2,436,854, Mar. 2.

Cornell-Dubilier Electric Corporation, assignee: *See*—
Dubilier, William.

Corning Glass Works, assignee: *See*—
McGregor, Rob R., and Warrick.

Corn Products Refining Company, assignee: *See*—
Leuck, Gerald J.

C-O-Two Fire Equipment Co., assignee: *See*—
Cahusac, Clarence N., and Allen.

Cox, Herbert F., Jr.: *See*—
Nordquist, Ronald E. J., and Cox.

Cox, Parker G., and H. A. Hansen, Detroit, Mich., assignors to Bendix Aviation Corporation, South Bend, Ind. Sediment trap for filter provided with magnetic means. 2,437,221, Mar. 2.

Crane, Charles A., Chicago, Ill. Lifting jack. 2,437,078, Mar. 2.

Cray, Frank W., assignor to Interchemical Corporation, New York, N. Y. Typographic ink. 2,436,791, Mar. 2.

Cronin, Helen, Cincinnati, Ohio. Shoe cleaning guard. 2,436,953, Mar. 2.

Crowley, John A., Jr., New York, and O. G. Hayes, Manhasset, assignors to Socony-Vacuum Oil Company, Incorporated, New York, N. Y. Hydrocarbon conversion process. 2,437,222, Mar. 2.

Culbert, Fred J., Norfolk, Va. Internal-combustion engine. 2,436,855, Mar. 2.

Cunningham, Robert E., Jackson, Miss. Air or water attachment for dental engines. 2,437,017, Mar. 2.

Curtiss, Frank R., New Haven, Conn. Container. 2,437,079, Mar. 2.

Dahlander, Noël L., New Milford, Pa., assignor of one-half to R. J. Earl, Deerfield Beach, Fla. Cargo hook. 2,436,792, Mar. 2.

Dale, George T., Sea Cliff, N. Y. Adjustable hose drier. 2,436,856, Mar. 2.

Dana Corporation, assignee: *See*—
Miller, Kay.

Daniel, Pierre F., assignor to Ateliers Neyret-Beylier & Piccard-Pictet (Societe Anonyme), Grenoble, France. Sea wave power installation. 2,436,793, Mar. 2.

Daniel, Frederick K., Kew Gardens, assignor, by mesne assignments, to Sun Chemical Corporation, New York, N. Y. Fractionation of lacteal liquids. 2,437,080, Mar. 2.

Daniels, Oscar C., Sr., Oriental, N. C. Tonsillectome. 2,436,989, Mar. 2.

Danielsson, Paul, Stora Essingen, assignor to Arenco Aktiebolag, Stockholm, Sweden. Fish dressing machine. 2,437,081, Mar. 2.

Darling, Louis H., Vallejo, Calif., assignor to Fol-Gaf Limited. Cargo hook. 2,436,990, Mar. 2.

Dath, George E., Mokena, assignor to W. H. Miner, Inc., Chicago, Ill. Friction shock absorber for railway draft riggings. 2,436,917, Mar. 2.

Davis, Herbert L., Highland Park, N. J., and L. R. B. Hervey, West Concord, Mass., assignors to Johnson & Johnson. Wash resistant filter media. 2,437,082, Mar. 2.

Dawson, John W., West Newton, assignor to Raytheon Manufacturing Company, Newton, Mass. Method and apparatus for charging an electrical condenser. 2,436,794, Mar. 2.

Deere Manufacturing Co., assignee: *See*—
Petersen, Harry E.

De Forest, Taber, assignor to Magnaflux Corporation, Chicago, Ill. Magnetic inspection apparatus. 2,436,918, Mar. 2.

Dennis, Raymond B., Camp Blanding, Fla. Material conveying and screening machine. 2,436,795, Mar. 2.

Denton, Richard A., Riverton, N. J., assignor to Sun Chemical Corporation, New York, N. Y. Printing ink. 2,436,954, Mar. 2.

Denyven, Howard G.: *See*—
Hess, Arthur L., and Denyven.

De Rosa, Louis A., West Brighton, Staten Island, assignor to Federal Telephone and Radio Corporation, New York, N. Y. Keyed radio beacon. 2,436,796, Mar. 2.

Deschamps, Desire J., Rutherford, and D. C. Clarke, Mountain Lakes, N. J., and F. E. Ferguson, Bronxville, assignors to Deschamps Fuel Injection Corporation, New York, N. Y. Fuel injection pump. 2,436,797, Mar. 2.

Deschamps Fuel Injection Corporation, assignee: *See*—
Deschamps, Desire J., Clarke, and Ferguson.

Deutsch, Harold F.: *See*—
Williams, John W., and Deutsch.

Dirksen, Ole A., Spencer, Iowa. Combination bicycle seat and luggage carrier. 2,436,991, Mar. 2.

Dishal, Milton: *See*—
Richardson, Avery G., Dishal, and Le Grand.

Ditto, Incorporated, assignee: *See*—
Hess, Arthur L., and Denyven.

Dodge, Wesley, Oakland, Calif., assignor to Paterson Parchment Paper Company, Bristol, Pa. Bag handling machinery. 2,436,955, Mar. 2.

Dodson, Jesse L., Kingston, assignor of one-half to H. Hoder, Scranton, Pa. Electrical indicating apparatus and circuit closer therefor. 2,437,018, Mar. 2.

Dohanian, Luke M., Somerville, Mass. Vertically pivoted automobile side-window laminated mirror. 2,437,154, Mar. 2.

Donahue, Joseph, Shamokin, Pa. Drill chuck. 2,436,881, Mar. 2.

Dons, Eddie M., Tulsa, and J. V. Stevens, Oakhurst, Okla. Pipe coupling. 2,437,083, Mar. 2.

Doty, Spencer W.: *See*—
Arnesen, Walter A., Hertweck, and Doty.

Downes, John M.: *See*—
Prevost, Gerard T., and Downes.

Dubilier, William, New Rochelle, N. Y., assignor to Cornell-Dubilier Electric Corporation, South Plainfield, N. J. Container and terminal for electrical devices. 2,436,857, Mar. 2.

Du Mont, Allen B., Laboratories, Inc., assignee: *See*—
Rutherford, Robert E.

Dunkley, Melville E., Modesto, Calif. Treatment of green peas. 2,437,155, Mar. 2.

Dunlop, James, Ridgewood, N. J., assignor, by mesne assignments, to Westinghouse Electric Corporation, East Pittsburgh, Pa. Gear mechanism. 2,436,798, Mar. 2.

Du Pont, E. I., de Nemours & Company, assignee: *See*—
Barney, Arthur L.
Jacobson, Ralph A.
Kramer, Edward N.
Signaigo, Frank K.

Du Pras, Louis, Marquette, Mich. Snowplow. 2,436,956, Mar. 2.

Dutrow, Claude H., Frederick, Md. Sportsman's coat. 2,437,223, Mar. 2.

Earl, Robert J., assignee: *See*—
Dahlander, Noël L.

Eastman, Du Bois, Scarsdale, assignor to The Texas Company, New York, N. Y. Catalytic synthesis of hydrocarbons with controlled recycle of carbon dioxide. 2,436,957, Mar. 2.

Eastman Kodak Company, assignee: *See*—
Von Bramer, Harold, and Ruggles.

Edelhart, Edward S., Lima, assignor of one-half to H. R. Meredith, Allen County, Ohio. Double reversible film developing hanger. 2,436,882, Mar. 2.

Edwards, George, & Sons, Limited, assignee: *See*—
Hunt, Arthur L.

Eich, Sebastian, Chicago, Ill. Colostomy receptacle. 2,437,019, Mar. 2.

Eisele, Karl, Belleville, N. J., assignor to Camloc Fastener Corporation, New York, N. Y. Nut-assembling machine. 2,436,858, Mar. 2.

Eisenberg, Irwin W., Alhambra, Calif. Switch. 2,436,958, Mar. 2.

Ekin, Hursel L., Galion, and J. O. Young, Rocky River, assignors to The Galion Metallic Vault Company, Galion, Ohio. Vehicle transporting means. 2,436,959, Mar. 2.

Electric Storage Battery Company, The, assignee: *See*—
Woodbridge, Joseph L.

Ellis Drier Co., The, assignee: *See*—
Ellis, Hubert C.

Ellis, Hubert C., Evanston, assignor to The Ellis Drier Co., Chicago, Ill. Washing machine with pivotally supported outer and inner shells and power means on the outer shell for rotating the inner shell. 2,436,883, Mar. 2.

Emerson, Elizabeth K., executrix: *See*—
Emerson, Walter H.

Emerson, Walter H., deceased, East Liverpool, Ohio: E. K. Emerson, executrix, assignor to The Homer Laughlin China Company, Newell, W. Va. Decorating apparatus. 2,437,224, Mar. 2.

Enochs, John R.: *See*—
Welch, Alfred F., and Enochs.

Eras, Vincent J. M., assignor to Lips' Brandkasten-en Slotenfabrieken N. V., Dordrecht, Netherlands. Combination lock with rotating tumbler discs. 2,436,859, Mar. 2.

Ernst, Walter: *See*—
Geiger, George M., and Ernst.
Greene, Arthur M., Jr., and Ernst.
MacMillin, Howard F., Ernst, and Waldie.

Ernst, Walter, Mount Gilead, Ohio, assignor to H-P-M Development Corporation, Wilmington, Del. Solenoid with plunger. 2,436,992, Mar. 2.

Esecson, Simon, Malden, Mass. Pleat holding or clamping device. 2,437,084, Mar. 2.

Eshbaugh, Jesse E., Flint, assignor to General Motors Corporation, Detroit, Mich. Valve for aircraft cooling systems. 2,437,187, Mar. 2.

Eskenazi, Alfred: *See*—
Bergier, Jacques, Eskenazi, and Heilbronner.

Evans, John, Kingston, N. J., assignor to Radio Corporation of America. Heat detection device. 2,437,085, Mar. 2.

Evans, Theodore W.: *See*—
Morris, Rupert C., and Evans.

Fairey Aviation Company Limited, The, assignee: *See*—
Forsyth, Archibald G.

Farmer Bros. Coffee Co., assignee: *See*—
Ballerino, Richard E., and Ashdown.

Fassnacht, Paul H., West Nyack, assignor to Precision Shapes, Inc., New York, N. Y. Apparatus for milling. 2,436,960, Mar. 2.

Fast, Johann D., Eindhoven, Netherlands, assignor to Hartford National Bank and Trust Company, Hartford, Conn., as trustee. Coated welding rod. 2,436,884, Mar. 2.

Federal Telephone and Radio Corporation, assignee: *See*—
De Rosa, Louis A.
Hoffman, Ross B.
Neidorf, Samuel W.
Pickles, Sidney B.
Richardson, Avery G., Dishal, and Le Grand.
Soreny, Ernest V.
Warner, Arthur J.
Warner, Arthur J., and Bakst.
Watts, Chester B., Jr., and Himmel.

Ferguson, Frank E.: *See*—
Deschamps, Desire J., Clarke, and Ferguson.

Fiedler, Stuart O., and J. Bjorksten; said Fiedler assignor to Bjorksten Research Laboratories, Inc., Chicago, Ill. Electric current interrupter. 2,437,225, Mar. 2.

Field, Lester M.: *See*—
Spangenberg, Karl, Field, and Helm.

Fischer Casting Company, assignee: *See*—
Fischer, Louis.

Fischer, Louis, assignor to Fischer Casting Company, Plainfield, N. J. Smoker's stand. 2,437,226, Mar. 2.

Fisher, Irving, New Haven, Conn. Global map. 2,436,860, Mar. 2.

Fisher, John R., Jr., Dayton, Ohio, assignor to H-P-M Development Corporation, Wilmington, Del. Apparatus for injection molding. 2,436,993, Mar. 2.

Fol-Gaf Limited, assignee: *See*—
Darling, Louis H.

Food Machinery Corporation, assignee: *See*—
Kerr, Charles E.

Foote Bros. Gear and Machine Corporation, assignee: *See*—
Mackmann, Arthur.

Forberg, David A.: *See*—
Wheeler, Harold E., and Forberg.

Ford, Charles J., New York, N. Y. Trap. 2,437,020, Mar. 2.

Forsyth, Archibald G., Cheam, assignor to The Fairey Aviation Company Limited, Hayes, Middlesex, England. Self-contained variable pitch propeller. 2,437,188, Mar. 2.

Forsyth, Archibald G., Cheam, assignor to Fairey Aviation Company Limited, Hayes, Middlesex, England. Self-contained unit for variable pitch propellers. 2,437,189, Mar. 2.

Frank, Edward J., and C. S. Keller, Springfield, Pa., assignors to General Electric Company. Control for pressure operated switches. 2,437,086, Mar. 2.

Frick, Albion N., assignor to F. G. Bradbury, Los Angeles, Calif. Method and apparatus for cooling by evaporation. 2,437,156, Mar. 2.

Fries, Eduard, Zurich-Oerlikon, Switzerland. Transformer with regulatable leakage reactance. 2,437,021, Mar. 2.

Fritzinger, George H., West Orange, N. J., assignor of one-half to H. G. Kendall, Brooklyn, N. Y. Apparatus for using adhesive tape. 2,437,022, Mar. 2.

Fröhlich, Alfred: *See*—
Zeh, Walter, Schneider, and Frölich.

Frobner, Rudolph: *See*—
Fryzel, Louis V.

Frost, Lester P., U. S. Army, Fort Belvoir, Va. Outrigger type support. 2,436,799, Mar. 2.

Fryzel, Louis V., and R. Frobner, New York, N. Y. Adjustable stanchion. 2,436,800, Mar. 2.

Fuel Research Corporation, assignee: *See*—
Zwoyer, Ellsworth B. A.

Gabriel, Christopher K., Portland, Oreg. Retractable vehicle step. 2,436,961, Mar. 2.

Gale, Harold W., assignor to Hexagon Tool and Engineering Corporation, Dearborn, Mich. Manually controlled tracer. 2,437,190, Mar. 2.

Galion Metallic Vault Company, The, assignee: *See*—
Ekin, Hursel L., and Young.

Gasio, James, Los Angeles, Calif. Practical paper perforator. 2,436,801, Mar. 2.

Gates, Marshall D., Jr., Arlington, Va. Condensation products of quinones with active ethylene compounds. 2,437,087, Mar. 2.

Gaucher, Leon P., Mount Vernon, assignor to The Texas Company, New York, N. Y. Catalytic synthesis of hydrocarbons and the like from hydrogen and the oxides of carbon. 2,436,962, Mar. 2.

Geiger, George M., and W. Ernst, Mount Gilead, Ohio, assignors to H-P-M Development Corporation, Wilmington, Del. Pintle porting. 2,437,089, Mar. 2.

Gellman Manufacturing Company, assignee: *See*—
Petskeyes, Charles H.

General American Transportation Corporation, assignee: *See*—
Shanor, Edgar E.

General Aniline & Film Corporation, assignee: *See*—
Zeh, Walter, Schneider, and Frölich.

General Electric Company, assignee: *See*—
Belfils, Georges.
Carlson, George.
Frank, Edward J., and Keller.
Lum, Walter O.
Scott, William J., and Milner.
Sinks, Allen T.
Welch, Alfred F., and Enochs.
Zuvers, Howard E.

General Foods Corporation, assignee: *See*—
Muser, Harvey K., and Mitchell.

General Motors Corporation, assignee: *See*—
Eshbaugh, Jesse E.
Gould, Louis P., and Whiteside.
Rabezzana, Hector.
Rataiczak, Francis I.
Rossman, Edwin F.
Short, Brooks H.
Werner, Calvin J.

General Tire & Rubber Company, The, assignee: *See*—
Neher, Eldon P.

Gertler, Samuel I., and H. L. J. Haller, Washington, D. C., assignors to the United States of America as represented by the Secretary of Agriculture. Fly sprays comprising an N-alkylphthalimide and DDT. 2,436,919, Mar. 2.

Gertler, Samuel I., and H. L. J. Haller, Washington, D. C., assignors to United States of America, as represented by the Secretary of Agriculture. Fly sprays comprising an N, N-dialkyleinnamamide and DDT. 2,436,920, Mar. 2.

Giannini, Gabriel M., West Los Angeles, Calif., assignor, by mesne assignments, to Automatic Electric Laboratories, Inc., Chicago, Ill. Microphone assembly. 2,437,088, Mar. 2.

Gilbert, Lewis W., Seneca Falls, N. Y. Automatic starting switch. 2,437,023, Mar. 2.

Gill, Ray H., Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y. Upsetting tool for hollow rivets. 2,437,191, Mar. 2.

Gillespie, J. W., Henderson, Tex. Sucker rod guide. 2,436,994, Mar. 2.

Glanz, Joseph J., New Haven, assignor to Aircraft Tools, West Haven, Conn. Hinge. 2,437,192, Mar. 2.

Glassford, Donald C.: *See*—
Wilson, Jack P., Lewis, and Glassford.

Giessner, Jack M., Dayton, Ohio. System of modulation utilizing a cathode follower. 2,436,802, Mar. 2.

Gold, Ira, Chicago, Ill. Educational toy. 2,437,090, Mar. 2.

Goldsby, Arthur R., assignee, et al.: *See*—
Korpi, Karl, and Goldsby.

Goldsby, Arthur R., Beacon, and C. W. Watson, Eastchester, assignors to The Texas Company, New York, N. Y. Sulfuric acid fortification in isoparaffin alkylation. 2,437,091, Mar. 2.

Goldstine, Hallan E., and O. F. Voigt, Port Jefferson Station, N. Y., assignors to Radio Corporation of America. Dial lock. 2,436,921, Mar. 2.

Goodman Manufacturing Company, assignee: *See*—
Slomer, Joseph J.

Goodrich, B. F., Company, The, assignee: *See*—
Gill, Ray H.
Heston, Eugene E.

Gould, Louis P., and J. W. Whiteside, Dayton, Ohio, assignors to General Motors Corporation, Detroit, Mich. Dielectric composition comprising polychloroprene, wax, age resistor and antioxidant. 2,436,885, Mar. 2.

Gowland, John P., Woking, England. Sound producing toy. 2,436,886, Mar. 2.

Grant, Robert Y., Jr., Townsend, Mass. Whistle. 2,437,024, Mar. 2.

Greene, Arthur M., Jr., Princeton, N. J., and W. Ernst, Mount Gilead, Ohio, assignors to H-P-M Development Corporation, Wilmington, Del. Metal-stretching press. 2,437,092, Mar. 2.

Gregoire, Horace W., Boston, assignor to O. W. Wikstrom, Newton, Mass. Machine for setting up box blanks. 2,437,157, Mar. 2.

Greisman, Hyman, assignor to Monroe Paper Box Co. Inc., New York, N. Y. Reel. 2,436,861, Mar. 2.

Greth, Douglas T.: *See*—
Riemenschneider, Edmund W., and Greth.

Grosdoff, Igor E., Princeton, N. J., assignor to Radio Corporation of America. Electronic counting chain with decimal indicators. 2,436,963, Mar. 2.

Grote, Henry W., Downers Grove, assignor to Universal Oil Products Company, Chicago, Ill. Catalytic conversion process. 2,436,922, Mar. 2.

Guellich, Gustav E.: *See*—
Reardon, Joseph D., and Guellich.

Tucker, Warren R.
Waldie, George A.

Haensel, Vladimir, Clarendon Hills, assignor to Universal Oil Products Company, Chicago, Ill. Demethylation of hydrocarbons in presence of water. 2,436,923, Mar. 2.

Hall, Manville, Akron, Ohio. Cushioned shoe sole. 2,437,227, Mar. 2.

Haller, Herbert L. J.: *See*—
Gertler, Samuel I., and Haller.

Hamilton, James D., Winnipeg, Manitoba, Canada. Illuminating device. 2,436,995, Mar. 2.

Hamilton, Virgil A., assignee: *See*—
Tatro, Frank B.

Hammond Iron Works, assignee: *See*—
Plummer, Fred L.

Hanke, Adolph W., Weleetka, Okla. Paraffin dislodging tool. 2,437,193, Mar. 2.

Hansen, Einer F., Highland Park, Mich. Painter's accessory. 2,436,924, Mar. 2.

Hansen, Fred A.: *See*—
Haug, Eugene H., and Hansen.

Hansen, Hans A.: *See*—
Cox, Parker G., and Hansen.

Harrington, Bertie S., assignor to Armour and Company, Chicago, Ill. Consistometer. 2,437,194, Mar. 2.

Hartford National Bank & Trust Co., trustee, assignee: *See*—
Fast, Johann D.
Rubin, Leon.
Van Weenen, Franciscus L., and Stigter.

Hatten, Herman, Buffalo, N. Y. Machine for cutting holes in pipes and similar articles. 2,437,025, Mar. 2.

Haug, Eugene H., assignor to La Salle National Bank, Chicago, Ill., as trustee. Electric control system. 2,436,803, Mar. 2.

Haug, Eugene H., Chicago, and F. A. Hansen, River Forest, Ill. Electric regulating apparatus. 2,436,925, Mar. 2.

Hayes, Oswald G.: *See*—
Crowley, John A., Jr., and Hayes.

Heiney, John W., Allentown, Pa., assignor to Mack Manufacturing Corporation, New York, N. Y. Yieldable bogie spring mounting. 2,437,158, Mar. 2.

Heibronner, Andre: *See*—
Bergier, Jacques, Eskenazi, and Heibronner.

Helm, Robert: *See*—
Spangenberg, Karl, Field, and Helm.

Hensley, Marvin M., assignee, et al.: *See*—
Hensley, Urban N.

Hensley, Urban N., Reno, assignor of forty per cent to L. Alexander, Greenville, and eight per cent to M. M. Hensley, Reno, Ill. Electrical soldering device with attachment. 2,436,887, Mar. 2.

Herbert, Edward J., Scarsdale, N. Y. Combined sun shade and reflector for cameras. 2,437,159, Mar. 2.

Hertweck, Bernhard: *See*—
Arnesen, Walter A., Hertweck, and Doty.

Hervey, Laurence R. B.: *See*—
Davis, Herbert L., and Hervey.

Hess, Arthur L., Milford, and H. G. Denyven, Cincinnati, Ohio, assignors to Ditto, Incorporated, Chicago, Ill. Process for making unit strips. 2,436,888, Mar. 2.

Heston, Eugene E., Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y. Protective apparatus for preventing accumulation of ice on airfoils. 2,436,889, Mar. 2.

Hexagon Tool and Engineering Corporation, assignee: *See*—
Gale, Harold W.

Hiers, Franklin J., assignor of one-fourth to T. A. Hodges, Portsmouth, Va. Adjustable scaffold or staging. 2,436,862, Mar. 2.

Higinbotham, William A., Santa Fe, N. Mex., assignor, by mesne assignments, to the United States of America, as represented by the Secretary of War. Modulated saw tooth sweep generator. 2,436,890, Mar. 2.

Higinbotham, William A., Santa Fe, N. Mex., assignor, by mesne assignments, to the United States of America, as represented by the Secretary of War. Electronic system for differentiating voltage waveforms. 2,436,891, Mar. 2.

Hill, John S., assignor to Masonite Corporation, Laurel, Miss. Process of recovering organic compounds. 2,436,804, Mar. 2.

Himmel, Leon: *See*—
Watts, Chester B., Jr., and Himmel.

Hitchcox, Annie, assignee, et al.: *See*—
Milwain, Alfred.

Hitchcox, Herbert H. G., assignee, et al.: *See*—
Milwain, Alfred.

Hoder, Harry, assignee: *See*—
Dodson, Jesse L.

Hodges, Thomas A., assignee: *See*—
Hiers, Franklin J.

Hoffman, Ross B., Glen Ridge, N. J., assignor to Federal Telephone and Radio Corporation, New York, N. Y. Radio indicating system. 2,436,805, Mar. 2.

Hoffmann-La Roche Inc., assignee: *See*—
Businger, Albert.
Karrer, Paul.
Morrison, Alexander L., and Konigstein.

Holsapple, Harvey T.: *See*—
Mears, Norman B., and Holsapple.

Homer Laughlin China Company, The, assignee: *See*—
Emerson, Walter H.

Homrighous, John H., Oak Park, Ill. Time division multiplex communication system. 2,437,027, Mar. 2.

Hooker, Ralph J., Manchester, assignor to United Aircraft Corporation, East Hartford, Conn. Rack fastening for free-piston units. 2,437,026, Mar. 2.

Hoover Company, The, assignee: *See*—
Schug, Howard L.
Sutton, Otis B.

Horsting, William F., Wilmette, Ill. Shoe tree. 2,437,028, Mar. 2.

Hotchkiss Realty Corporation, assignee: *See*—
Peterson, Roy E., and Larsen.

Howard, William B., La Jolla, Calif. Collapsible shopping cart. 2,437,029, Mar. 2.

Howser, Walter M., Indianapolis, Ind. Sealed driving bushing. 2,436,996, Mar. 2.

Hoza, John, Belcamp, Md. Attachment of rubber soles to uppers of shoes. 2,437,030, Mar. 2.

Huge, Henry M., assignor, by mesne assignments, to Lorain Products Corporation, Lorain, Ohio. Magnetic frequency changer. 2,437,093, Mar. 2.

Hull, Leonard J., assignee: *See*—
Larter, Raymond B.

Humphrey, Stanley M., assignor to Taylor-Winfield Corporation, Warren, Ohio. Welding apparatus. 2,436,863, Mar. 2.

Hunt, Arthur L., Nottingham, assignor to George Edwards & Sons, Limited, Somercotes, Derbyshire, England. Circular knitted stocking. 2,437,195, Mar. 2.

Hunt, Everett M., Portsmouth, N. H. Forming and shearing device. 2,436,806, Mar. 2.

Hunter, Ralph W., Jacksonville, Fla. Method and apparatus for aligning machinery. 2,436,892, Mar. 2.

Huttner, Daniel, and R. S. Kramer, Chicago, Ill.: said Kramer assignor to said Huttner. Pillow filling machine with suction creating means. 2,437,196, Mar. 2.

Hyland, William A., Horicon, Wis., assignor to John Deere Van Brunt Company. Gear shifting mechanism for grain drills or the like. 2,437,094, Mar. 2.

Illinois Clay Products Company, The, assignee: *See*—
Prosser, Robert A., and Nichols.

Industrial Rayon Corporation, assignee: *See*—
Standley, George P., and McLellan.

Interchemical Corporation, assignee: *See*—
Cray, Frank W.

International Business Machines Corporation, assignee: *See*—
Roth, Robert I.

International Minerals & Chemical Corporation, assignee: *See*—
Barr, James A., and Smith.

International Resistance Company, assignee: *See*—
Lodge, Edmund G.

International Standard Electric Corporation, assignee: *See*—
Bracke, Oscar J. J.
Spangenberg, Karl, Field, and Helm.
Wolfson, Henry.

Inventions Corporation, assignee: *See*—
Bridges, John H.

Isbister, Eric J., Brooklyn, N. Y., assignor to The Sperry Corporation. Electrical follow-up system. 2,436,807, Mar. 2.

Ivester, Cecil B., Sunray, Tex., assignor to Continental Carbon Company. Time delay switch. 2,437,197, Mar. 2.

Jacobsen, Bent B., and M. M. Levy, assignors to Standard Telephones and Cables Limited, London, England. Multivibrator. 2,436,808, Mar. 2.

Jacobsen, Peter E. V., Copenhagen, Denmark. Cardboard box for eggs. 2,436,997, Mar. 2.

Jacobson, Ralph A., Landenburg, Pa., assignor to E. I. du Pont de Nemoura & Company, Wilmington, Del. Polymerization of acrylic acid nitriles. 2,436,926, Mar. 2.

Jasmer, Pearley A., Milwaukee, Wis. Tire chain. 2,437,031, Mar. 2.

Jefferson Electric Company, assignee: *See*—
Rickmeyer, Ernst W.

Joel, Amos E., Jr., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Electric combination lock. 2,436,809, Mar. 2.

Johnson & Johnson, assignee: *See*—
Davis, Herbert L., and Hervey.

Johnson, Paul W., Hartford, Conn. Pivoted jaw gage. 2,437,160, Mar. 2.

Johnson, Robert, Verona, assignor to Koppers Company, Inc., Pittsburgh, Pa. Dehydration process. 2,436,864, Mar. 2.

Jones, George M., Jenkintown Manor, assignor to Luxor Corporation, Philadelphia, Pa. Knife sharpener. 2,436,810, Mar. 2.

Jones, Ralph W., Sr., assignee: *See*—
Jones, Robert M.

Jones, Robert M., Bellevue, Nebr., assignor to R. W. Jones, Sr., St. Paul, Minn. Drill press. 2,436,964, Mar. 2.

Joy Toys, Inc., assignee: *See*—
McBride, Charles L.

Joyce-Cridland Company, The, assignee: *See*—
Copeland, Frank B.

Kähr, Gustaf, Stockholm, Sweden. Wooden deck covering on ships. 2,437,095, Mar. 2.

Kane, Garold A., assignor to The Northern Pump Company, Minneapolis, Minn. Hydraulic hoist system. 2,437,161, Mar. 2.

Kaprelian, Edward K., Alexandria, Va. Variable field range and view finder. 2,437,032, Mar. 2.

Karrer, Paul, Zurich, Switzerland, assignor to Hoffmann-La Roche Inc., Nutley, N. J. Derivatives of 3-oxo-4-hydroxy-thiophan and the manufacture thereof. 2,436,865, Mar. 2.

Kassel, Louis S., Riverside, assignor to Universal Oil Products Company, Chicago, Ill. Prevention of afterburning in fluidized catalytic cracking processes. 2,436,927, Mar. 2.

Kay, James A., assignor to Rose Brothers (Gainsborough) Limited, Gainsborough, England. Packaging machinery. 2,437,198, Mar. 2.

Keller, Charles S.: *See*—
Frank, Edward J., and Keller.

Keller, William M., Merion, assignor to The Pennsylvania Railroad Company, Philadelphia, Pa. Table for vehicles. 2,437,162, Mar. 2.

Kempe, Robert A., assignor to Thompson Products, Inc., Cleveland, Ohio. Method of and apparatus for making poppet valves. 2,436,928, Mar. 2.

Kendall, Harold G., assignee: *See*—
Fritzinger, George H.

Kenney, George M., Cranston, and J. F. Cavanagh, Providence, assignors to Kenney Manufacturing Company, Cranston, R. I. Curtain rod or similar article. 2,436,811; Mar. 2.

Kenney Manufacturing Company, assignee: *See*—
Kenney, George M., and Cavanagh.

Kent-Owens Machine Company, assignee: *See*—
Tremblay, Albert F.

Kerr, Charles E., Hoopeston, Ill., assignor to Food Machinery Corporation, San Jose, Calif. Filling machine. 2,436,812, Mar. 2.

Khakiani, Hassanally K., Bombay, British India. Hospital bedstead. 2,437,096, Mar. 2.

King, Aden J., assignor to King Laboratories Inc., Syracuse, N. Y. Getter structure. 2,437,097, Mar. 2.

King Laboratories Inc., assignee: *See*—
King, Aden J.

Kirk, Philip, Philadelphia, Pa. Seat for use in aircraft. 2,437,199, Mar. 2.

Königstein, Marianne: *See*—
Morrison, Alexander L., and Königstein.

Koppel, Ernst R., Chicago, Ill., assignor to A. O. Smith Corporation, Milwaukee, Wis. Gas valve safety shutoff. 2,437,163, Mar. 2.

Koppers Company, Inc., assignee: *See*—
Johnson, Robert.

Korpi, Karl, and A. R. Goldsby, Port Arthur, Tex., assignors, by mesne assignments, to The Texas Company, New York, N. Y. Alkylation of hydrocarbons. 2,436,965, Mar. 2.

Kramer, Edward N., assignor to E. I. du Pont de Nemoura & Company, Wilmington, Del. Processing of titanium ores. 2,437,164, Mar. 2.

Kramer, Richard S.: *See*—
Huttner, Daniel, and Kramer.

Kroll, Nathan J.: *See*—
Kroll, Samuel and N. J.

Kroll, Samuel and N. J., Chicago, Ill. Baby carriage with detachable body. 2,437,098, Mar. 2.

Kronhaus, Semen, Los Angeles, Calif. Portable folding electric clothes presser. 2,436,998, Mar. 2.

Krupp, Louis, Brooklyn, N. Y. Combination handle and closure means for handbags. 2,437,099, Mar. 2.

Kuppersmith, Fred W., Bloomington, Ill. Clamping device. 2,437,200, Mar. 2.

Lackner, Emma H., assignee: *See*—
Lackner, Rolph J.

Lackner, Rolph J., assignor to E. H. Lackner, Richmond Hill, N. Y. Swinging scaffold. 2,436,813, Mar. 2.

Lambach, Fritz, Tenafly, N. J. Auxiliary bobbin support for use on the shank of a bobbin holder. 2,437,100, Mar. 2.

Lancaster, John E., New York, N. Y., assignor to Worthington Pump and Machinery Corporation, Harrison, N. J. Mechanical seal. 2,436,866, Mar. 2.

Landgraf, Francis J. and R. P., Chicago, Ill. Synchronous electric clock motor. 2,437,201, Mar. 2.

Landgraf, Richard P.: *See*—
Landgraf, Francis J. and R. P.

Larsen, Elmer J., and O. G. Nelson, Baltimore, Md., assignors to Western Electric Company, Incorporated, New York, N. Y. Length measuring apparatus in combination with a twisting machine. 2,437,101, Mar. 2.

Larsen, Howard M.: *See*—
Peterson, Roy E., and Larsen.

Larter, Raymond B., assignor of one-half to L. J. Hull, Los Angeles, Calif. Index device. 2,437,102, Mar. 2.

LaSalle National Bank, assignee, trustee: *See*—
Haug, Eugene H.

Lawson, Frank C., Anderson, Ind. Fluid drive for motorcycles. 2,436,893, Mar. 2.

Leach, John F., Childress, Tex. Centrifugal pump. 2,437,103, Mar. 2.

Lebedeff, Yurii E., Metuchen, N. J., assignor to American Smelting and Refining Company, New York, N. Y. Recovering tin from stannic chloride. 2,436,868, Mar. 2.

Lee Foundation for Nutritional Research, assignee: *See*—
Lee, Royal.

Lee, Richard K., assignor to The McKay Company, York, Pa. Welding rod. 2,436,867, Mar. 2.

Lee, Royal, assignor to Lee Foundation for Nutritional Research, Milwaukee, Wis. Food product and producing same. 2,437,104, Mar. 2.

Leece-Neville Company, The, assignee: *See*—
Allen, Edward J.

Le Grand, Jesse S.: *See*—
Richardson, Avery G., Dishal, and Le Grand.

Legris, Joseph A., Toronto, Ontario, Canada. Photographic exposure meter. 2,436,966, Mar. 2.

Leitch, James L., Bel Air, Md. Ortho-tolidine tablet composition. 2,436,814, Mar. 2.

Leppla, Rudolph, assignor to McConway & Torley Corporation, Pittsburgh, Pa. Spring plank. 2,437,033, Mar. 2.

Lester Engineering Company, assignee: *See*—
Lester, Nathan.

Lester, Nathan, Shaker Heights, assignor to Lester Engineering Company, Cleveland, Ohio. Injection molding machine spreader. 2,436,869, Mar. 2.

Leuck, Gerald J., Brooklyn, assignor to Corn Products Refining Company, New York, N. Y. Polymerization of sugars. 2,436,967, Mar. 2.

Levy, Maurice M.: *See*—
Jacobsen, Bent B., and Levy.

Lewis, Herbert T., Jr.: *See*—
Wilson, Jack P., Lewis, and Glassford.

Lindsey, Robert J., Mount Gilead, Ohio, assignor to H-P-M Development Corporation, Wilmington, Del. Metal stretching press having slidable platen supports provided with clamping faces. 2,437,105, Mar. 2.

Linn, Carl B., Riverside, assignor to Universal Oil Products Company, Chicago, Ill. Polymerization of olefinic hydrocarbons. 2,436,929, Mar. 2.

Lipe-Rollway Corporation, assignee: *See*—
Spase, Charles B.

Lips Brandkasten-en Slotenfabrieken N. V., assignee: *See*—
Eras, Vincent J. M.

Livingstone, Harry, Longsight, Manchester, and W. E. Rogers, Timperley, Altrincham, assignors to Manchester Repetition Engineers Limited, Longsight, Manchester, England. Grinding or like machines. 2,437,106, Mar. 2.

Locke, Arthur A., Detroit, Mich. Helicopter lifting screw operating mechanism. 2,437,165, Mar. 2.

Lodge, Edmund G., Rosemont, assignor to International Resistance Company, Philadelphia, Pa. Volume control. 2,437,166, Mar. 2.

Longfield, William F., assignor to The Cleveland Punch & Shear Works Company, Cleveland, Ohio. Combined clutch and brake. 2,436,968, Mar. 2.

Lorain Products Corporation, assignee: *See*—
Huge, Henry M.

Lovelock, Arthur R., Boat of Garten, Scotland. Match draw indicator. 2,437,167, Mar. 2.

Lum, Walter O., Schenectady, N. Y., assignor to General Electric Company. Pressure operated valve. 2,436,815, Mar. 2.

Luxor Corporation, assignee: *See*—
Jones, George M.

Lyons, Lee J., Webster Groves, Mo. Apparatus for forming axle bearings. 2,437,107, Mar. 2.

Mack Manufacturing Corporation, assignee: *See*—
Heiney, John W.

Mackmann, Arthur, assignor to Foote Bros. Gear and Machine Corporation, Chicago, Ill. Motor reducer unit. 2,436,930, Mar. 2.

MacMillin, Howard F., W. Ernst, and G. A. Waldie, Mount Gilead, Ohio, assignors to H-P-M Development Corporation. Method and apparatus for plastic injection. 2,436,939, Mar. 2.

Madison, Martin J., Oteen, N. C. Chocks for aircraft and other vehicles. 2,437,108, Mar. 2.

Magee, Edward B., assignor to Port Colborne Iron Works Limited, Port Colborne, Ontario, Canada. Fair-lead for cables, ropes, and the like. 2,436,894, Mar. 2.

Magnaflux Corporation, assignee: *See*—
De Forest, Taber.

Manchester Repetition Engineers Limited, assignee: *See*—
Livingstone, Harry, and Rogers.

Maquat, Lloyd E., Easton, assignor to The Black Rock Manufacturing Company, Bridgeport, Conn. Dipping machine. 2,437,109, Mar. 2.

Marencik, William J., Parma, assignor to Thompson Products, Inc., Cleveland, Ohio. Preventing scaling during the forging of hollow metal articles. 2,436,931, Mar. 2.

Marihart, Leo A., Monterey, Calif. Timing apparatus. 2,437,168, Mar. 2.

Marino, Salvatore, Chicago, Ill. Ravioli machine. 2,437,202, Mar. 2.

Markowitz, Louis C., San Diego, Calif. Medicinal applicator and therapeutic device. 2,436,895, Mar. 2.

Marler, Milton T., Los Angeles, Calif. Package. 2,437,110, Mar. 2.

Marty, Amos R., Marion, Ohio. Nonvibratory massaging device. 2,436,969, Mar. 2.

Masonite Corporation, assignee: *See*—
Hill, John S.

Mattox, William J., La Grange, assignor to Universal Oil Products Company, Chicago, Ill. Production of polycyclic hydrocarbons. 2,436,932, Mar. 2.

McBride, Charles, assignor to Joy Toys, Inc., Tampa, Fla. Toy ferris wheel. 2,437,000, Mar. 2.

McCandless, William, Toledo, Ohio. Fuel tank gage. 2,437,203, Mar. 2.

McCarty, Lourdes V., assignor to Automatic Products Company, Milwaukee, Wis. Different density fuel level control device. 2,436,933, Mar. 2.

McConway & Torley Corporation, assignee: *See*—
Leppla, Rudolph.

McGregor, Rob R., Verona, and E. L. Warrick, Pittsburgh, Pa., assignors to Corning Glass Works, Corning, N. Y. Sulfuric acid polymerization of diorganosiloxanes. 2,437,204, Mar. 2.

McKay Company, The, assignee: *See*—
Lee, Richard K.

McKeige, Edward E., Cranford, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y. Cable clamp. 2,437,111, Mar. 2.

McLellan, Kenneth M.: *See*—
Standley, George P., and McLellan.

Mears, Norman B., West St. Paul, assignor to Buckbee-Mears Company, St. Paul, Minn. Photo-printing apparatus. 2,437,229, Mar. 2.

Mears, Norman B., West St. Paul, Minn., and H. T. Holsapple, New Rochelle, N. Y., assignors to Buckbee-Mears Company, St. Paul, Minn. Reticle. 2,437,228, Mar. 2.

Meinzer, Gotthold H., Glendale, Calif. Polishing machine. 2,437,034, Mar. 2.

Meredith, Harry R., assignee: *See*—
Edelhart, Edward S.

Metal & Thermit Corporation, assignee: *See*—
Richter, Hartmut W.

Meyer, Maximilian C., Brooklyn, N. Y. Baseball game. 2,436,816, Mar. 2.

Meyers, W. F., Company, assignee: *See*—
Sneva, Ingolf.

Middleton, Leslie H., and D. H. Stoltenberg, Toledo, Ohio. Spark plug. 2,437,205, Mar. 2.

Miller, Abe, Detroit, Mich. Washing machine with divided container and axial inlet. 2,437,169, Mar. 2.

Miller, Kay, Kalamazoo, Mich., assignor, by mesne assignments, to Dana Corporation, Toledo, Ohio. Clutch actuating mechanism. 2,436,817, Mar. 2.

Milner, Christopher J.: *See*—
Scott, William J., and Milner.

Milwain, Alfred, assignor of two-thirds to H. H. G. and A. Hitchcox, Coventry, England. Cycle or like locking mechanisms. 2,437,112, Mar. 2.

Miner, W. H., Inc., assignee: *See*—
Dath, George E.

Minich, Arthur, Westfield, assignor to Nuodex Products Co., Inc., Elizabeth, N. J. Dodecylamine salt of 2-mercaptobenzothiazole and making the same. 2,437,170, Mar. 2.

Mistretta, Vincent F., Fanwood, N. J., assignor to Standard Oil Development Company. Ferrous metal supported zinc oxide-bismuth oxide catalyst. 2,436,970, Mar. 2.

Mitchell, William A.: *See*—
Murer, Harvey K., and Mitchell.

Monroe Paper Box Co., Inc., assignee: *See*—
Greisman, Hyman.

Monsanto Chemical Company, assignee: *See*—
Mowry, David T.

Montelius, Carl O. J., assignor to Aktiebolaget Imo-Industri, Stockholm, Sweden. Fluid regulating device. 2,437,113, Mar. 2.

Moore, Coleman B., Carroll Park, assignor to The Brown Instrument Company, Philadelphia, Pa. Measuring instrument chart plate support. 2,436,971, Mar. 2.

Moore, George A., assignor to National Biscuit Company, New York, N. Y. Container. 2,437,114, Mar. 2.

Morris, Rupert C., Berkeley, and T. W. Evans, Oakland, assignors to Shell Development Company, San Francisco, Calif. Recovery of olefinic hydrocarbons. 2,437,230, Mar. 2.

Morrison, Alexander L., and M. Königstein, Welwyn Garden City, England, assignors to Hoffmann-La Roche Inc., Nutley, N. J. Ether-esters of organic hydroxy diphenyl acetic acid and manufacture of same. 2,437,035, Mar. 2.

Mowry, David T., Dayton, Ohio, assignor to Monsanto Chemical Company. Copolymers of styrene and a beta-cyanoacrylate. 2,437,231, Mar. 2.

Muller, Johan A., and W. R. Tucker, Dayton, Ohio., assignors to The H-P-M Development Corporation, Wilmington, Del. Mechanically actuated hydraulic control system for pump control. 2,437,115, Mar. 2.

Mummert, Arden J., and H. P. Phillips, St. Louis County, Mo., assignors, by mesne assignments, to Perfect Circle Corporation. Piston packing. 2,436,896, Mar. 2.

Murer, Harvey K., Summit, and W. A. Mitchell, Cedar Grove, N. J., assignors to General Foods Corporation, New York, N. Y. Production of starch from cereal grains. 2,437,036, Mar. 2.

Murphree, Eger V., Summit, N. J., assignor to Standard Oil Development Company. Preparation of chlorine. 2,436,870, Mar. 2.

Musher Foundation Incorporated, assignee: *See*—
Musher, Sidney.

Musher, Sidney, assignor to Musher Foundation Incorporated, New York, N. Y. Cosmetic preparations. 2,436,818, Mar. 2.

National Biscuit Company, assignee: *See*—
Moore, George A.

National Carbon Company, Inc., assignee: *See*—
Carmichael, Robert, and Seidler.

National Cash Register Company, The, assignee: *See*—
Braner, Henry J.

National Electric Instrument Company, Inc., assignee: *See*—
Arnesen, Walter A., Hertweck, and Doty.

National Pitch Corporation, assignee: *See*—
Norbom, Ragnar A.

Neher, Eldon P., North Manchester, Ind., assignor to The General Tire & Rubber Company, Akron, Ohio. Shock absorbing device. 2,437,206, Mar. 2.

Neidorf, Samuel W., Nutley, N. J., assignor to Federal Telephone and Radio Corporation, New York, N. Y. Method of forming glass beads. 2,436,819, Mar. 2.

Nelson, Oscar G.: *See*—
Larsen, Elmer J., and Nelson.

Nelson, Perley A. and W. R., El Segundo, Calif. Delayed action electric switch. 2,437,037, Mar. 2.

Nelson, William R.: *See*—
Nelson, Perley A. and W. R.

Nichols, Arthur S.: *See*—
Prosser, Robert A., and Nichols.

Nielsen, Niels E., Summit, and F. G. Stirling, Maplewood, N. J. Bristle tuft and holding bar. 2,436,934, Mar. 2.

Nopco Chemical Company, assignee: *See*—
Robinson, Edwin A., and Beach.

Norbom, Ragnar A., New York, N. Y., assignor to National Pitch Corporation. Locking containers on vehicles. 2,436,972, Mar. 2.

Nordquist, Ronald E. J., Maplewood, N. J., assignor to American Can Company, New York, N. Y. Feeding and gauging mechanism. 2,436,821, Mar. 2.

Nordquist, Ronald E. J., Maplewood, and H. F. Cox, Jr., Summit, N. J., assignors to American Can Company, New York, N. Y. Feeding articles to be marked. 2,436,820, Mar. 2.

Northern Pump Company, The, assignee: *See*—
Kane, Garold A.

Nowka, Wilfred A., Hastings, Nebr. Kite. 2,437,038, Mar. 2.

Noxon, Paul A., Tenafly, assignor to Bendix Aviation Corporation, Bendix, N. J. Clutch. 2,437,207, Mar. 2.

Nuodex Products Co., Inc., assignee: *See*—
Minich, Arthur.

Nutt, Harold, assignor to Borg-Warner Corporation, Chicago, Ill. Carburetor control linkage. 2,436,897, Mar. 2.

Nye-Wait Company, Inc., assignee: *See*—
Bryant, Leslie E.

Odessey, Paul H., Great Neck, N. Y., assignor to Raytheon Manufacturing Company, Newton, Mass. Stabilizer for alternating current line regulators. 2,436,822, Mar. 2.

Oehser, Edward M.: *See*—
Salisbury, Robert H., and Oehser.

Ohler, Albert A., Detroit, Mich. Fastener for tying elements. 2,436,935, Mar. 2.

Oppegaard, Parnell H., McIntosh, Minn. Snow plow. 2,437,116, Mar. 2.

Örström, Gustaf. Alsten, Sweden, assignor to Arenco Aktiebolag. Bag feeding machine with bag opening and expanding means. 2,437,117, Mar. 2.

Ostline, John E., Chicago, Ill., assignor to Automatic Electric Laboratories, Inc. Automatic telephone system having rating independent of routing. 2,437,118, Mar. 2.

Ottinger, August F.: *See*—
Brady, Charles V., and Ottinger.

Overby, Stanley, Inglewood, and C. S. Viall, Sr., Los Angeles, Calif.; said Viall assignor to said Overby. Spring seat construction. 2,437,119, Mar. 2.

Pacific Can Company, assignee: *See*—
Bourland, Eli.

Page, Herbert E., Pasadena, Calif. Variable-speed drive. 2,436,936, Mar. 2.

Parker, Ruth F., Memphis, Tenn. Compact. 2,437,120, Mar. 2.

Paterson Parchment Paper Company, assignee: *See*—
Dodge, Wesley.

Pechukas, Alphonse, Akron, Ohio, assignor to Pittsburgh Plate Glass Company, Pittsburgh, Pa. Composite titanium dioxide–metal oxide pigment. 2,437,171, Mar. 2.

Pennsylvania Railroad Company, The, assignee: *See*—
Keller, William M.

Pereles, Maurice, East Orange, N. J. Spark plug. 2,436,973, Mar. 2.

Perfect Circle Corporation, assignee: *See*—
Mummert, Arden J., and Phillips.

Petersen, Harry E., Waterloo, Iowa, assignor to Deere Manufacturing Co. Starting control mechanism for internal-combustion engines. 2,437,121, Mar. 2.

Petersén, Tor, Stockholm, Sweden. Hand grenade. 2,437,001, Mar. 2.

Peterson, Roy E., Norwalk, and H. M. Larsen, Fairfield, assignors, by mesne assignments, to Hotchkiss Realty Corporation, Norwalk, Conn. Staple driving implement. 2,437,039, Mar. 2.

Peterson, William R., Oswego, assignor to St. Regis Paper Company, New York, N. Y. Valve bag filler. 2,437,172, Mar. 2.

Petskeyes, Charles H., Davenport, Iowa, assignor to Gellman Manufacturing Company, Rock Island, Ill. Knife frame attaching means for multiple reciprocating blade bread slicing machines. 2,437,122, Mar. 2.

Petskeyes, Charles H., Davenport, Iowa, assignor to Gellman Manufacturing Company, Rock Island, Ill. Blade mounting means for multiple blade bread slicing machines. 2,437,123, Mar. 2.

Petskeyes, Charles H., Davenport, Iowa, assignor to Gellman Manufacturing Company, Rock Island, Ill. Feeding device for multiple blade bread slicing machines. 2,437,124, Mar. 2.

Philco Corporation, assignee: *See*—
Bingley, Frank J.

Phillips, Harold P.: *See*—
Mummert, Arden J., and H. P. Phillips.

Phillips Petroleum Company, assignee: *See*—
Roberts, Perry L.

Pickles, Sidney B., Jackson Heights, assignor to Federal Telephone and Radio Corporation, New York, N. Y. Course modifying system. 2,436,823, Mar. 2.

Pittsburgh Plate Glass Company, assignee: *See*—
Pechukas, Alphonse.

Plummer, Fred L., assignor to Hammond Iron Works, Warren, Pa. Floating roof for tanks. 2,437,125, Mar. 2.

Pope, Daniel K., Thomaston, Ga. Twister ring lubricating device. 2,437,208, Mar. 2.

Porcelain Metals Corporation, assignee: *See*—
Birdwell, Benjamin F.

Port Colborne Iron Works Limited, assignee: *See*—
Magee, Edward B.

Potter, Ralph K., Morristown, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Radio paging for vehicles. 2,436,824, Mar. 2.

Precision Shapes, Inc., assignee: *See*—
Fassnacht, Paul H.

Premier Crystal Laboratories, Incorporated, assignee: *See*—
Bach, Henry M.

Prevost, Gerard T., and J. M. Downes, Bridgeport, Conn. Nonskid device for tires. 2,437,040, Mar. 2.

Prior, Harold D., Plainfield, N. J., assignor to The Titanium Alloy Manufacturing Company, New York, N. Y. Superopaque enamel. 2,436,825, Mar. 2.

Proctor & Schwartz, Inc., assignee: *See*—
Wilson, Jack P., Lewis, Jr., and Glassford.

Proell, Wayne A., assignor to Standard Oil Company, Chicago, Ill. Hydrocarbon fuel oil. 2,437,041, Mar. 2.

Prosser, Robert A., Riverside, and A. S. Nichols, Oak Park, assignors to The Illinois Clay Products Company, Joliet, Ill. Material projecting apparatus. 2,437,042, Mar. 2.

Quality Appliances, Inc., assignee: *See*—
Snyder, Leland H.

Rabezzana, Hector, Flint, assignor to General Motors Corporation, Detroit, Mich. Making spark plugs. 2,437,209, Mar. 2.

Radio Corporation of America, assignee: *See*—
Evans, John.
Goldstine, Hallan E., and Voigt.
Grosdoff, Igor E.

Radio Patents Corporation, assignee: *See*—
Rath, Karl.

Ratajczak, Francis I., assignor to General Motors Corporation, Dayton, Ohio. Shell ejecting mechanism for machine guns. 2,436,937, Mar. 2.

Rath, Karl, assignor to Radio Patents Corporation, New York, N. Y. Center frequency stabilized frequency modulated oscillator. 2,436,871, Mar. 2.

Raytheon Manufacturing Company, assignee: *See*—
Dawson, John W.
Odessey, Paul H.
Stutsman, Paul W.

Reardon, Joseph D., and G. E. Guellich, Buffalo, N. Y., assignors, by mesne assignments, to American Optical Company, Southbridge, Mass. Cemented optical element having light absorbing coating. 2,437,126, Mar. 2.

Refining Unincorporated, assignee: *See*—
Clayton, Benjamin.

Regad, Eugene D., and A. T. Anderson, Dover, N. J. Primer. 2,436,826, Mar. 2.

Resinous Products & Chemical Company, The, assignee: *See*—
Rothrock, David A., Jr., and Conyne.

Richardson, Avery G., Boonton, and M. Dishal and J. S. Le Grand, Nutley, N. J., assignors to Federal Telephone and Radio Corporation, New York, N. Y. Channel identifying system. 2,436,827, Mar. 2.

Richardson, Lloyd D., Dayton, Ohio, assignor to H-P-M Development Corporation, Wilmington, Del. Apparatus for powder metallurgy. 2,437,127, Mar. 2.

Richter, Hartmut W., Rahway, N. J., assignor to Metal & Thermit Corporation, New York, N. Y. Preparing potassium stannate. 2,436,974, Mar. 2.

Rickmeyer, Ernst W., Elmhurst, assignor to Jefferson Electric Company, Bellwood, Ill. Plunger switch. 2,436,898, Mar. 2.

Rieber, William K., Los Angeles, Calif. Variable-speed transmission. 2,437,128, Mar. 2.

Riebli, Walter W., Oakland, Calif. Drainage system for stables. 2,437,210, Mar. 2.

Riedling, John H., assignor of one-half to M. Wilkerson, Memphis, Tenn. Ring grinding machine. 2,437,002, Mar. 2.

Riemenschneider, Edmund W., and D. T. Greth, assignors to The Union Metal Manufacturing Company, Canton, Ohio. Collapsible pile-driving mandrel. 2,437,043, Mar. 2.

Ring, Douglas H., Red Bank, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Coupling arrangement for use in wave transmission systems. 2,436,828, Mar. 2.

Rivest, Paul E., London, Ontario, Canada. Circular cutter. 2,436,899, Mar. 2.

Roberts, Perry L., Bartlesville, Okla., assignor to Phillips Petroleum Company. Removal of traces of water from mixtures of hydrogen chloride with low-boiling hydrocarbons. 2,436,900, Mar. 2.

Robinson, Edwin A., Chatham, and R. M. Beach, Florham Park, assignors to Nopco Chemical Company, Harrison, N. J. Tanning with chromiates of lignin sulfonic acids. 2,437,044, Mar. 2.

Rogers, William E.: *See*—
Livingstone, Harry, and Rogers.

Roper, Edwin E., assignor to Stanolind Oil and Gas Company, Tulsa, Okla. Determination of hydrocarbon concentration in soil samples. 2,437,045, Mar. 2.

Rose Brothers (Gainsborough) Limited, assignee: *See*—
Kay, James A.

Ross, Albert R., Western Springs, assignor to Boyar-Schultz Corporation, Chicago, Ill. Knurling tool. 2,436,975, Mar. 2.

Rossman, Edwin F., Dayton, Ohio, assignor to General Motors Corporation, Detroit, Mich. Hydraulic shock absorber. 2,436,901, Mar. 2.

Roth, Robert I., Hawthorne, assignor to International Business Machines Corporation, New York, N. Y. Bipolar magnetic control record. 2,436,829, Mar. 2.

Rothrock, David A., Jr., and R. F. Conyne, assignors to The Resinous Products & Chemical Company, Philadelphia, Pa. Stabilization of polyesters. 2,437,046, Mar. 2.

Rothrock, David A., Jr., and R. F. Conyne, Philadelphia, Pa., assignors to The Resinous Products & Chemical Company. Stabilization of polyesters from dihydric alcohols and both saturated and unsaturated dicarboxylic acids. 2,437,232, Mar. 2.

Rovick, John D., Muncie, Ind., assignor to Borg-Warner Corporation, Chicago, Ill. Gear grinding fixture. 2,436,902, Mar. 2.

Rubin, Leon, Buenos Aires, Argentina, assignor to Hartford National Bank and Trust Company, Hartford, Conn., as trustee. Phase modulation. 2,437,047, Mar. 2.

Ruegg, Arthur E., Zurich, Switzerland. Machine for molding concrete units. 2,437,003, Mar. 2.

Ruggles, Albert C.: *See*—
Von Bramer, Harold, and Ruggles.

Rutherford, Robert E., Nutley, assignor to Allen B. Du Mont Laboratories, Inc., Passaic, N. J. Device for discriminating between fixed and moving objects. 2,437,173, Mar. 2.

Rutledge, William J., Lucy, Tenn. Steam head for drier drums. 2,437,004, Mar. 2.

St. Regis Paper Company, assignee: *See*—
Petersen, William R.

Salisbury, Robert H., and E. M. Oehser, assignors to Consolidated Vultee Aircraft Corporation, San Diego, Calif. Ear protector. 2,437,049, Mar. 2.

Sallés, Jaime, Montevideo, Uruguay. Apparatus for determining the relative differences of speed of two rotary elements. 2,437,048, Mar. 2.

Schafer, Minnie M., San Diego, Calif. Bathtub handhold construction. 2,436,903, Mar. 2.

Scharmann, Walter G., Westfield, and Frank T. Barr, Summit, N. J., assignors to Standard Oil Development Company. Producing motor fuel. 2,436,938, Mar. 2.

Schermuly, Alfred J.: *See*—
Schermuly, Conrad D., A. J., and C.

Schermuly, Charles: *See*—
Schermuly, Conrad D., A. J., and C.

Schermuly, Conrad D., A. J., and C., assignors to The Schermuly Pistol Rocket Apparatus Limited, Parkgate, Newdigate, Surrey, England. Rocket. 2,437,211, Mar. 2.

Schermuly Pistol Rocket Apparatus Limited, The, assignee: *See*—
Schermuly, Conrad D., A. J., and C.

Schneider, Wilhelm: *See*—
Zeh, Walter, Schneider, and Fröhlich.

Schottland, Frederic D., Forest Hills, N. Y. Electric condenser and method for making the same. 2,437,212, Mar. 2.

Schreiber, John H., St. Louis, Mo. Rotary cathead. 2,437,129, Mar. 2.

Schug, Howard L., Palo Alto, Calif., assignor to The Hoover Company, North Canton, Ohio. Magnetic coupling and bearing. 2,436,939, Mar. 2.

Schulein, Joseph, Corvallis, Oreg. Regenerating anodizing baths. 2,436,940, Mar. 2.

Schulz, Armand C., Milwaukee, Wis. Dampening roller. 2,437,050, Mar. 2.

Schwarz, Egon H., Zurich, Switzerland. Production of print pictures on print bodies. 2,437,005, Mar. 2.

Scott, William J., and C. J. Milner, Rugby, England, assignors to General Electric Company. Ultra high frequency electric discharge device. 2,437,130, Mar. 2.

Seidler, Arthur W.: *See*—
Carmichael, Robert, and Seidler.

Sendoykas, Jack J., Detroit, Mich. Toggle clamp. 2,436,941, Mar. 2.

Sensel, Eugene E., Beacon, and R. A. Beck, Glenham, assignors, by mesne assignments, to The Texas Company, New York, N. Y. Hydrogenation of carbon monoxide. 2,437,051, Mar. 2.

Seurynck, Bernard J., Detroit, Mich. Bowling ball. 2,436,976, Mar. 2.

Shanor, Edgar E., Sharon, Pa., assignor to General American Transportation Corporation, Chicago, Ill. Seal for floating roof tanks. 2,436,942, Mar. 2.

Sharpless, William M., Fair Haven, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Transmission system and method. 2,436,830, Mar. 2.

Shaw, Victor S., Mount Gilead, Ohio, assignor to H-P-M Development Corporation. Fluid operable short stroke device. 2,437,131, Mar. 2.

Shea, Frederick M., assignor to Bear Brand Hosiery Co., Kankakee, Ill. Knitting machine. 2,436,904, Mar. 2.

Shell Development Company, assignee: *See*—
Morris, Rupert C., and Evans.

Short, Brooks H., Anderson, Ind., assignor to General Motors Corporation, Detroit, Mich. Ignition system. 2,436,905, Mar. 2.

Signaigo, Frank K., Kenmore, N. Y., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Production of active carbon. 2,437,174, Mar. 2.

Silva, Willard C., Sarasota, Fla. Celery harvester. 2,436,831, Mar. 2.

Simpson, William T., St. Clairsville, Ohio. Invalid pad. 2,437,006, Mar. 2.

Singer Manufacturing Company, The, assignee: *See*—
Spaine, Edward P.

Sinks, Allen T., Beach Bluff, Mass., assignor to General Electric Company. Remote indicating compass. 2,437,132, Mar. 2.

Sirks, Walter M., Columbus, Ohio. Baby feeder. 2,437,133, Mar. 2.

Slomer, Joseph J., assignor to Goodman Manufacturing Company, Chicago, Ill. Trolley pole positioning means. 2,437,213, Mar. 2.

Smith, A. O., Corporation, assignee: *See*—
Koppel, Ernst R.

Smith, August L., Harrison, N. Y. Electrode assembly for moisture meters. 2,437,134, Mar. 2.

Smith, Clyde E., assignor to The Taylor-Winfield Corporation, Warren, Ohio. Timing circuits. 2,436,872, Mar. 2.

Smith, Travis O., Kansas City, Mo., assignor, by mesne assignments, to Arbee Products Company, Kansas City, Kans. Bag holder. 2,437,233, Mar. 2.

Smith, William A.: *See*—
Barr, James A., and Smith.

Sneva, Ingolf, assignor to W. F. Meyers Company, Bedford, Ind. Radius-angle former. 2,436,873, Mar. 2.

Snyder, Leland H., assignor, by mesne assignments, to Quality Appliances, Inc., Chicago, Ill. Electric flatiron. 2,436,943, Mar. 2.

Société "Elox," assignee: *See*—
Verge, Pierre L. A.

Socin, Francis C., Batavia, assignor to The Rudolph Wurlitzer Company, Chicago, Ill. Piano action. 2,436,875, Mar. 2.

Socony-Vacuum Oil Company, Incorporated, assignee: *See*—
Crowley, John A., Jr., and Hayes.

Soreny, Ernest V., New York, N. Y., assignor to Federal Telephone and Radio Corporation. Connecting device and making the same. 2,436,832, Mar. 2.

Spaine, Edward P., Bridgeport, Conn., assignor to The Singer Manufacturing Company, Elizabeth, N. J. Thread-controller for sewing machines. 2,437,052, Mar. 2.

Spangenberg, Karl, L. M. Field, and R. Helm, Palo Alto, Calif., assignors to International Standard Electric Corporation, New York, N. Y. High density beam tube. 2,436,833, Mar. 2.

Spase, Charles B., Nedrow, assignor to Lipe-Rollway Corporation, Syracuse, N. Y. Friction clutch. 2,436,874, Mar. 2.

Sperry Corporation, The, assignee: *See*—
Isbister, Eric J.

Square D Company, assignee: *See*—
Andresen, John H., Jr.

Stamsvik, Alfred L., Pittsburgh, Pa. Rotary sliding vane pump structure. 2,436,876, Mar. 2.

Standard Oil Company, assignee: *See*—
Proell, Wayne A.

Standard Oil Development Company, assignee: *See*—
Mistretta, Vincent F.
Murphree, Eger V.
Scharmann, Walter G., and Barr.

Standard Telephones and Cables Limited, assignee: *See*—
Bray, Frederick H.
Jacobsen, Bent B., and Levy.
Williams, Herbert P.

Standley, George P., Cleveland Heights, and K. M. McLellan, Cleveland, assignors to Industrial Rayon Corporation, Cleveland, Ohio. Reinforcing cord and manufacture. 2,436,978, Mar. 2.

Standley, George P., Cleveland Heights, and K. M. McLellan, Cleveland, assignors to Industrial Rayon Corporation, Cleveland, Ohio. Tire cord and manufacture. 2,436,979, Mar. 2.

Standley, George P., Cleveland Heights, and K. M. McLellan, Cleveland, assignors to Industrial Rayon Corporation, Cleveland, Ohio. Tire cord and manufacture. 2,436,980, Mar. 2.

Stanolind Oil and Gas Company, assignee: *See*—
Roper, Edwin E.

Steinhoff, Gordon R., Santa Monica, Calif., and J. W. Blair, Tulsa, Okla., assignors to Boeing Airplane Company, Wichita, Kans. Airplane landing gear and emergency release mechanism therefor. 2,437,135, Mar. 2.

Stemmons, Clarence H., Kansas City, Mo. Foot leveler. 2,437,136, Mar. 2.

Stevens, Jesse V.: *See*—
Dons, Eddie M., and Stevens.

Stevens, Marie M., Chicago, Ill. Protector for nursing mothers. 2,436,977, Mar. 2.

Stigter, Willem H.: *See*—
Van Weenen, Franciscus L., and Stigter.

Stirling, Fred G.: *See*—
Nielsen, Niels E., and Stirling.

Stodola, Edwin K., Neptune, N. J. Phase and frequency modulation. 2,436,834, Mar. 2.

Stoltenberg, Delbert H.: *See*—
Middleton, Leslie H., and Stoltenberg.

Stutsman, Paul W., Needham, assignor, by mesne assignments, to Raytheon Manufacturing Company, Newton, Mass. Control circuit for gas discharge tubes. 2,436,835, Mar. 2.

Sullivan, John J., Arlington, assignor of one-half to L. L. Witter, Boston, Mass. Pouring carton. 2,436,981, Mar. 2.

Summers, Thomas O., Jr., Los Angeles, Calif. Gyroscopic flight indicating instrument. 2,437,175, Mar. 2.

Sun Chemical Corporation, assignee: *See*—
Daniel, Frederick K.
Denton, Richard A.

Sutherland, Robert E., assignor to Universal Oil Products Company, Chicago, Ill. Isomerization of saturated hydrocarbons. 2,436,944, Mar. 2.

Sutton, Otis B., assignor to The Hoover Company, North Canton, Ohio. Two temperature absorption refrigerating apparatus and method. 2,436,945, Mar. 2.

Svoboda, Theodore, Fairbury, Nebr. Clock-controlled switch. 2,436,906, Mar. 2.

Swanson, Clark F., Cologne, Minn. Mailbox. 2,437,053, Mar. 2.

Swebilius, Carl G., Hamden, Conn. Gun-barrel lock. 2,437,137, Mar. 2.

Tatal, Ladislao S., Habana, Cuba. Inflatable orthopedic shoulder pad. 2,437,054, Mar. 2.

Tatro, Frank B., assignor, by mesne assignments, to Virgil A. Hamilton, Chicago, Ill. Capacity-type phonograph pickup. 2,436,946, Mar. 2.

Taylor Instrument Companies, assignee: *See*—
Wharton, Armistead.

Taylor, Willard O., Ranger, Tex. Underground cutter for trees. 2,437,176, Mar. 2.

Taylor-Winfield Corporation, assignee: *See*—
Humphrey, Stanley M.
Smith, Clyde E.

Texas Company, The, assignee: *See*—
Eastman, Du Bois.
Gaucher, Leon P.
Goldsby, Arthur R., and Watson.
Korpi, Karl, and Goldsby.
Sensel, Eugene E., and Beck.

Theis, Frank H., Hutchinson, Kans. Pneumatic grain loader. 2,437,138, Mar. 2.

Theobald, Thomas O., Royal Oak, Mich. Casting and apparatus therefor. 2,437,177, Mar. 2.

Thompson, Clifford J., Davenport, Fla. Bag seal and handle. 2,437,055, Mar. 2.

Thompson Products, Inc., assignee: *See*—
Kempe, Robert A.
Marencik, William J.

Thorns, Phillip M., Clements, Calif. Haying machine. 2,437,007, Mar. 2.

Thorpe, Warren, Lawrence, N. Y. Information posting board. 2,436,836, Mar. 2.

Titanium Alloy Manufacturing Company, The, assignee: *See*—
Prior, Harold D.
Wainer, Eugene.

Traylor, John B., Denver, Colo. Fuse for antitank mines. 2,436,837, Mar. 2.

Tremblay, Albert F., assignor to Kent-Owens Machine Company, Toledo, Ohio. Lehr feeder. 2,437,214, Mar. 2.

Trimble, Russell F., Cambridge, Mass., assignor, by mesne assignments, to the United States of America, as represented by the Secretary of War. Indirectly heated cathode. 2,436,907, Mar. 2.

Tucker, Warren R.: *See*—
Muller, Johan A., and Tucker.

Tucker, Warren R., Dayton, Ohio, assignor to H-P-M Development Corporation, Wilmington, Del. Hydraulic speed control apparatus. 2,437,139, Mar. 2.

Turnquist, Carl E., San Gabriel, Calif. Food slicer with swinging plural spaced knives. 2,436,982, Mar. 2.

Union Metal Manufacturing Company, The, assignee: *See*—
Riemenschneider, Edmund W., and Greth.

Union Switch & Signal Company, The, assignee: *See*—
Breisch, Edgar W.

United Aircraft Corporation, assignee: *See*—
Hooker, Ralph J.

United Shoe Machinery Corporation, assignee: *See*—
Barbati, Guido J.

U. S. Slicing Machine Company, assignee: *See*—
Brownsey, Oscar.

Universal Oil Products Company, assignee: *See*—
Grote, Henry W.
Haensel, Vladimir.
Kassel, Louis S.
Linn, Carl B.
Mattox, William J.
Sutherland, Robert E.

Van Brunt, John Deere Company, assignee: *See*—
Hyland, William A.

Van Doehren, George, Fredericksburg, Iowa. Oil filter screen. 2,437,008, Mar. 2.

Van Weenen, Franciscus L., and W. H. Stigter, Eindhoven, Netherlands, assignors to Hartford National Bank & Trust Co., Hartford, Conn., as trustee. Flexible connecting rod. 2,436,908, Mar. 2.

Vergne, Pierre L. A., Saint-Cloud, assignor to Société "Elox," Courbevoie, France. Overload release clutch. 2,436,947, Mar. 2.

Viall, Charles S., Sr., assignee: *See*—
Overby, Stanley.

Voigt, Oswin F.: *See*—
Goldstine, Hallan E., and Voigt.

Von Bramer, Harold, and A. C. Ruggles, Kingsport, Tenn., assignors to Eastman Kodak Company, Rochester, N. Y. Stabilization of tetraalkyl lead and compositions containing the same. 2,436,838, Mar. 2.

Vredenburg, Edric W., Berkeley, Calif. Device for simultaneously filling and weighing bags. 2,436,983, Mar. 2.

Vroman, John C., Detroit, Mich. Piston construction. 2,437,056, Mar. 2.

Wainer, Eugene, Niagara Falls, N. Y., assignor to The Titanium Alloy Manufacturing Company, New York, N. Y. High dielectric composition and making same. 2,436,839, Mar. 2.

Wainer, Eugene, Niagara Falls, assignor to The Titanium Alloy Manufacturing Company, New York, N. Y. Temperature stable dielectric and making same. 2,436,840, Mar. 2.

Waldie, George A.: *See*—
MacMillin, Howard F., Ernst, and Waldie.

Waldie, George A., Edison, Ohio, assignor to H-P-M Development Corporation. Electronic motor control circuits. 2,437,140, Mar. 2.

Wallace, Walter E., assignor to Bell and Wallace Manufacturing Corporation, Richmond, Ind. Casket construction. 2,437,141, Mar. 2.

War, United States of America as represented by the Secretary of, assignee: *See*—
Higinbotham, William A.
Trimble, Russell F.
Wiler, Edward M.
Williams, John W., and Deutsch.

Warner, Arthur J., South Orange, N. J., assignor to Federal Telephone and Radio Corporation, New York, N. Y. Testing polystyrene. 2,436,841, Mar. 2.

Warner, Arthur J., South Orange, and Myron Bakst, assignors to Federal Telephone and Radio Corporation, Newark, N. J. Insulating material containing cyclized rubber, a polyolefine, and polystyrene. 2,436,842, Mar. 2.

Warner, Arthur R., London, N. W. 8, England. Illuminated sign. 2,437,009, Mar. 2.

Gregoire, Horace W.
Wiler, Edward M., Belmar, N. J., assignor to the United States of America, as represented by the Secretary of War. Coaxial spark gap. 2,436,845, Mar. 2.
Wilkerson, Margaret, assignee: *See*—
Riedling, John H.
Williams, George W., assignee et al.: *See*—
Ames, Robert G.
Williams, Harvey A., Davidson, Mich. Mount for gun sights. 2,436,948, Mar. 2.
Williams, Herbert Paul, assignor to Standard Telephones and Cables Limited, London, England. Glide path system for aircraft. 2,436,846, Mar. 2.
Williams, John W., and Harold F. Deutsch, Madison, Wis., assignors to the United States, as represented by the Secretary of War. Recovering gamma globulins from human blood serum. 2,437,060, Mar. 2.
Williams, Marvin L., Tulare, Calif. Ground working implement. 2,437,059, Mar. 2.
Wilson, Arthur L., Brentwood, Calif. Electrical cable. 2,436,984, Mar. 2.
Wilson, Jack P., Ardmore, Herbert T. Lewis, Jr., Philadelphia, and Donald C. Glassford, Merion Station, assignors to Proctor & Schwartz, Inc., Philadelphia, Pa. Apparatus for mixing dry and liquid materials and loading into containers. 2,437,216, Mar. 2.
Winnen, Franklyn E.: *See*—
Benjamin, Milton L. and Winnen.
Wisconsin Alumni Research Foundation, assignee: *See*—
Wolf, Frank M.
With, Bror, Skoyen near Oslo, Norway. Nonskid device for shoes. 2,437,143, Mar. 2.
Witter, Lawrie L., assignee: *See*—
Sullivan, John J.
Wolf, Frank M., assignor to Wisconsin Alumni Research Foundation, Madison, Wis. Fluid cooled four-way valve. 2,437,144, Mar. 2.
Wolfson, Henry, London, England, assignor, by mesne assignments, to International Standard Electric Corporation, New York, N. Y. Cathode-ray tube and visual indicating systems for apparatus including cathode-ray tube. 2,436,847, Mar. 2.
Woodbridge, Joseph Lester, Philadelphia, Pa., assignor to The Electric Storage Battery Company. Nonspill vent for storage batteries. 2,437,145, Mar. 2.
Worthington Pump and Machinery Corporation, assignee: *See*—
Lancaster, John E.
Wright, Edwin Herbert, Farnham Common, England. Projection of stereoscopic images. 2,437,061, Mar. 2.
Wurlitzer Rudolph Company, The, assignee: *See*—
Socin, Francis C.
Wyble, Glen D., Maywood, Calif. Wind screen. 2,437,062, Mar. 2.
Young, Joseph O.: *See*—
Ekin, Hursel L., and Young.
Zeh, Walter, Wolfen, Kreis Bitterfeld, Wilhelm Schneider and Alfred Fröhlich, Dessau, Germany, assignors to General Aniline & Film Corporation, New York, N. Y. Nondiffusing 1-phenyl-5-pyrazolone couplers for color photography. 2,437,063, Mar. 2.
Zeidler, Reinhold C., Detroit, Mich., assignor to Borg-Warner Corporation, Chicago, Ill. Fluid coupling. 2,436,911, Mar. 2.
Zuvers, Howard E., Scotia, N. Y., assignor to General Electric Company. Electrical discharge device employing a pool-type cathode. 2,437,146, Mar. 2.
Zwiebelson, Abraham, Mount Vernon, N. Y. Brassière. 2,437,217, Mar. 2.
Zwoyer, Ellsworth B. A., Perth Amboy, N. J., assignor to Fuel Research Corporation, New York, N. Y. Colloidal mills of the multiple grinding unit type. 2,437,147, Mar. 2.

LIST OF REISSUE INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 2D DAY OF MARCH, 1948

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Food product. G. J. Esselen. Re. 22,978, Mar. 2.

Rig, Conveying. W. E. Lambert. Re. 22,979, Mar. 2.

LIST OF PLANT INVENTIONS

Buddleia plant. P. J. Schmidt. 786, Mar. 2.

LIST OF DESIGN INVENTIONS

Atomizer, Portable. H. C. Yaeger. 148,899, Mar. 2.
Bottle. B. Lewis. 148,880, Mar. 2.
Bracelet, Expansible. F. S. Rice. 148,888, Mar. 2.
Bracelet or similar article. A. Katz. 148,865, Mar. 2.
Bracelet or similar article. A. Katz. 148,867, Mar. 2.
Brooch or similar article. N. Barbieri. 148,840, Mar. 2.
Brooch or similar article. B. Glass. 148,849–855, Mar. 2.
Brooch or similar article. A. Katz. 148,864, Mar. 2.
Brooch or similar article. A. Katz. 148,866, Mar. 2.
Brooch or similar article. A. Katz. 148,868, Mar. 2.
Brooch or similar article. A. Katz. 148,872, Mar. 2.
Brooch or similar article, Separable. A. Katz. 148,875–7, Mar. 2.
Coffeepot or the like. E. S. Zeisel. 148,901, Mar. 2.
Dish. A. L. Suman. 148,891, Mar. 2.
Dress. B. Hurwitz. 148,857, Mar. 2.
Dress. J. F. Strassner. 148,890, Mar. 2.
Earring or similar article. A. Katz. 148,869–71, Mar. 2.
Earring or similar article. A. Katz. 148,873–4, Mar. 2.
Earring or similar article. A. Philippe. 148,885, Mar. 2.
Flashlight, Oval pocket. M. J. Kelly. 148,879, Mar. 2.
Game board. H. M. Fisher and M. A. Barnett. 148,847, Mar. 2.
Iron, Electric. J. O. Reinecke. 148,887, Mar. 2.
Jacket. N. Finkelstein. 148,845–6, Mar. 2.
Lamp base. J. A. Post. 148,886, Mar. 2.
Lighter. A. W. Doux. 148,843–4, Mar. 2.
Masking unit for bowling alley pin setters or the like. R. I. Anderson and B. Hoeker. 148,839, Mar. 2.
Medal or similar article. T. H. Jones. 148,861, Mar. 2.
Medal or similar article of manufacture. J. F. Malley and L. Ribera. 148,882, Mar. 2.
Medallion or similar article. T. H. Jones. 148,860, Mar. 2.
Merry-go-round. H. Sebel. 148,889, Mar. 2.
Necklace or similar article. A. Katz. 148,863, Mar. 2.
Necklace or similar article. A. Katz. 148,878, Mar. 2.
Nozzle, Hose. M. Swimmer. 148,892, Mar. 2.
Ornament, Cake. L. D. Bush. 148,841, Mar. 2.
Pedestal. F. Tatar. 148,893, Mar. 2.
Plug, Electric. S. Turk. 148,896, Mar. 2.
Plug, Electrical connection. V. S. Ward and G. K. Hurlbut. 148,897, Mar. 2.
Rack, Earring. P. L. Trenholm. 148,894–5, Mar. 2.
Range, Cooking. E. D. Pellegrin. 148,884, Mar. 2.
Scooter. Z. Gezari. 148,848, Mar. 2.
Shaker, Salt. V. A. Kasin. 148,862, Mar. 2.
Showcase. G. S. Cushman. 148,842, Mar. 2.
Shrine. J. C. Lown. 148,881, Mar. 2.
Stand, Sectional display. N. S. Irwin. 148,859, Mar. 2.
Table, Score. R. I. Anderson and B. Hoeker. 148,838, Mar. 2.
Table, Sectional display. N. S. Irwin. 148,858, Mar. 2.
Teapot or the like. E. S. Zeisel. 148,900, Mar. 2.
Tray for glasses or the like, Serving. W. C. Panzer. 148,883, Mar. 2.
Wallpaper border or similar article. A. Westrate. 148,898, Mar. 2.
Xylophone. E. H. Gruber. 148,856, Mar. 2.

LIST OF INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 2D DAY OF MARCH, 1948

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Adding machine. B. Cooper. 2,436,790, Mar. 2.
Adjustable hose drier. G. T. Dale. 2,436,856, Mar. 2.
Adjusting means for transmission lines. F. J. Bingley. 2,437,067, Mar. 2.
Aircraft and towing the same, Towed. C. S. Bell. 2,436,988, Mar. 2.
Air or water attachment for dental engines. R. E. Cunningham. 2,437,017, Mar. 2.
Airplane landing gear and emergency release mechanism therefor. G. R. Steinhoff and J. W. Blair. 2,437,135, Mar. 2.
Aligning machinery, Method and apparatus for. R. W. Hunter. 2,436,892, Mar. 2.
Alkylation of hydrocarbons. K. Korpi and A. R. Goldsby. 2,436,965, Mar. 2.
Aluminum connection parts treated with concentrated nitric acid. W. F. Bonwitt. 2,437,220, Mar. 2.
Apparatus for determining the relative differences of speed of two rotary elements. J. Sallés. 2,437,048, Mar. 2.
Apparatus for forming axle bearings. L. J. Lyons. 2,437,107, Mar. 2.
Apparatus for injection molding. J. R. Fisher, Jr. 2,436,993, Mar. 2.
Apparatus for milling. P. H. Fassnacht. 2,436,960, Mar. 2.
Apparatus for mixing dry and liquid materials and loading into containers. J. P. Wilson, H. T. Lewis, Jr., and D. C. Glassford. 2,437,216, Mar. 2.
Apparatus for powder metallurgy. L. D. Richardson. 2,437,127, Mar. 2.
Apparatus for using adhesive tape. G. H. Fritzinger. 2,437,022, Mar. 2.
Applicator and therapeutic device, Medicinal. L. C. Markowitz. 2,436,895, Mar. 2.
Applicator, Pressure plastic. R. G. Ames. 2,436,783, Mar. 2.
Arrangement for producing electric impulses. F. H. Bray. 2,436,787, Mar. 2.
Articles to be marked, Feeding. R. E. J. Nordquist and H. F. Cox, Jr. 2,436,820, Mar. 2.
Attachment of rubber soles to uppers of shoes. J. Hoza. 2,437,030, Mar. 2.
Automatic measurement of length by means of electrical impulses. J. Bergier, A. Eskenazi, and A. Helbronner. 2,436,785, Mar. 2.
Automatic starting switch. L. W. Gilbert. 2,437,023, Mar. 2.
Automatic telephone system having rating independent of routing. J. E. Ostline. 2,437,118, Mar. 2.
Automobile side-window laminated mirror, Vertically pivoted. L. M. Dohanian. 2,437,154, Mar. 2.
Auxiliary bobbin support for use on the shank of a bobbin holder. F. Lambach. 2,437,100, Mar. 2.
Baby carriage with detachable body. S. and N. J. Kroll. 2,437,098, Mar. 2.
Baby feeder. W. M. Sirks. 2,437,133, Mar. 2.
Bag and bag handle construction. N. H. Campbell. 2,437,072, Mar. 2.
Bag and the like, Labeled fabric. C. V. Brady and A. F. Ottinger. 2,437,184, Mar. 2.
Bag feeding machine with bag opening and expanding means. G. Örström. 2,437,117, Mar. 2.
Bag handling machinery. W. Dodge. 2,436,955, Mar. 2.
Bag holder. T. O. Smith. 2,437,233, Mar. 2.
Bags and the like, Making labeled. C. V. Brady and A. F. Ottinger. 2,437,185, Mar. 2.
Bar: *See*—
Bristle tuft and holding bar. Commutator bar.
Baseball game. M. C. Meyer. 2,436,816, Mar. 2.
Bathtub handhold construction. M. M. Schafer. 2,436,903, Mar. 2.
Beacon, Keyed radio. L. A. deRosa. 2,436,796, Mar. 2.
Bedpan system. F. Coffing. 2,436,915, Mar. 2.
Bedstead, Hospital. H. K. Khakiani. 2,437,096, Mar. 2.
Bicycle seat and luggage carrier, Combination. O. A. Dirksen. 2,436,991, Mar. 2.
Bipolar magnetic control record. R. I. Roth. 2,436,829, Mar. 2.
Blower. O. G. Berg. 2,437,183, Mar. 2.
Bookmark. H. E. Chapin. 2,437,074, Mar. 2.
Bowling ball. B. J. Seurynck. 2,436,976, Mar. 2.
Box for eggs, Cardboard. P. E. V. Jacobsen. 2,436,997, Mar. 2.

Brake mechanisms, Electromagnetic. L. S. Burgett. 2,436,880, Mar. 2.
Brassière. A. Zwiebelson. 2,437,217, Mar. 2.
Breathing shoe. S. B. Austin. 2,437,065, Mar. 2.
Bristle tuft and holding bar. N. E. Nielsen and F. G. Stirling. 2,436,934, Mar. 2.
Cable: *See*—
Electrical cable.
Cable clamp. E. E. McKelge. 2,437,111, Mar. 2.
Cable clamp and box, Electric. G. Carlson. 2,437,073, Mar. 2.
Carbon, Production of active. F. K. Signaigo. 2,437,174, Mar. 2.
Carburetor control linkage. H. Nutt. 2,436,897, Mar. 2.
Cargo hook. N. L. Dahlander. 2,436,792, Mar. 2.
Cargo hook. L. H. Darling. 2,436,990, Mar. 2.
Cart, Collapsible shopping. W. B. Howard. 2,437,029, Mar. 2.
Carton, Pouring. J. J. Sullivan. 2,436,981, Mar. 2.
Casket construction. W. E. Wallace. 2,437,141, Mar. 2.
Casting and apparatus therefor. T. O. Theobald. 2,437,177, Mar. 2.
Catalytic conversion process. H. W. Grote. 2,436,922, Mar. 2.
Catalytic process for the synthesis of hydrocarbons and the like from hydrogen and the oxides of carbon. L. P. Gaucher. 2,436,962, Mar. 2.
Catalytic synthesis of hydrocarbons with controlled recycle of carbon dioxide. DuB. Eastman. 2,436,957, Mar. 2.
Cathode-ray tube and visual indicating systems for apparatus including cathode-ray tube. H. Wolfson. 2,436,847, Mar. 2.
Cemented optical element having light absorbing coating. J. D. Reardon and G. E. Guellich. 2,437,126, Mar. 2.
Center frequency stabilized frequency modulated oscillator. K. Rath. 2,436,871, Mar. 2.
Centrifugal pump. J. F. Leach. 2,437,103, Mar. 2.
Cereal, Compressed. I. A. Berg. 2,437,150, Mar. 2.
Chain: *See*—
Tire chain.
Channel identifying system. A. G. Richardson, M. Dishal, and J. S. LeGrand. 2,436,827, Mar. 2.
Charging an electrical condenser, Method and apparatus for. J. W. Dawson. 2,436,794, Mar. 2.
Chocks for aircraft and other vehicles. M. J. Madison. 2,437,108, Mar. 2.
Chuck. M. L. Benjamin and F. E. Winnen. 2,436,848, Mar. 2.
Chuck, Drill. J. Donahue. 2,436,881, Mar. 2.
Circuit: *See*—
Electric control circuit.
Circuits, Timing. C. E. Smith. 2,436,872, Mar. 2.
Circular cutter. P. E. Rivest. 2,436,899, Mar. 2.
Clamp: *See*—
Cable clamp. Toggle clamp.
Clamping device. F. W. Kuppersmith. 2,437,200, Mar. 2.
Clock-controlled switch. T. Svoboda. 2,436,906, Mar. 2.
Clutch: *See*—
Overload release clutch.
Clutch. P. A. Noxon. 2,437,207, Mar. 2.
Clutch actuating mechanism. K. Miller. 2,436,817, Mar. 2.
Clutch and brake, Combined. W. F. Longfield. 2,436,968, Mar. 2.
Coat, Sportsman's. C. H. Dutrow. 2,437,223, Mar. 2.
Coated welding rod. J. D. Fast. 2,436,884, Mar. 2.
Coffee brewing apparatus. R. E. Ballerino and R. F. Ashdown. 2,436,784, Mar. 2.
Colloidal mills of the multiple grinding unit type. E. B. A. Zwoyer. 2,437,147, Mar. 2.
Colostomy receptacle. S. Elch. 2,437,019, Mar. 2.
Commutator bar. C. J. Werner. 2,436,910, Mar. 2.
Compact. R. F. Parker. 2,437,120, Mar. 2.
Composite titanium dioxide-metal oxide. A. Pechukas. 2,437,171, Mar. 2.
Compressor. J. J. Corey. 2,436,854, Mar. 2.
Condensation products of quinones with active ethylene compounds. M. D. Gates, Jr. 2,437,087, Mar. 2.
Connecter: *See*—
Detachable electrical connector. Electrical connector.
Connecting device and making the same. E. V. Soreny. 2,436,832, Mar. 2.

Connector: *See*—
Detachable electrical connector. Electrical connector.
Connector for shower bath receptors, Drain. B. F. Birdwell. 2,437,068, Mar. 2.
Connector with floatable means, Swivel electrical. A. E. Anderson. 2,436,949, Mar. 2.
Consistometer. B. S. Harrington. 2,437,194, Mar. 2.
Container. F. R. Curtiss. 2,437,079, Mar. 2.
Container. G. A. Moore. 2,437,114, Mar. 2.
Container and terminal for electrical devices. W. Dubilier. 2,436,857, Mar. 2.
Container for air transportation of fluids, Collapsible. H. F. Waters. 2,437,058, Mar. 2.
Control circuit for gas discharge. P. W. Stutsman. 2,436,835, Mar. 2.
Control for pressure operated switches. E. J. Frank and C. S. Keller. 2,437,086, Mar. 2.
Conveying and screening machine, Material. R. B. Dennis. 2,436,795, Mar. 2.
Cooker-cooler drive, Continuous. E. Bourland. 2,436,913, Mar. 2.
Cooling by evaporation, Method and apparatus for. A. N. Frick. 2,437,156, Mar. 2.
Copolymers of styrene and a beta-cyanoacrylate. D. T. Mowry. 2,437,231, Mar. 2.
Cosmetic preparations. S. Musher. 2,436,818, Mar. 2.
Coupling: *See*—
Fluid coupling. Pipe coupling.
Coupling and bearing, Magnetic. H. L. Schug. 2,436,939, Mar. 2.
Coupling arrangement for use in wave transmission systems. D. H. Ring. 2,436,828, Mar. 2.
Course modifying system. S. B. Pickles. 2,436,823, Mar. 2.
Covering on ships, Wooden deck. G. Kähr. 2,437,095, Mar. 2.
Crutch. J. H. Clemens. 2,437,076, Mar. 2.
Curtain rod or similar article. G. M. Kenney and J. F. Cavanagh. 2,436,811, Mar. 2.
Curve distortion of alternating currents, Method and apparatus for. P. Bricout. 2,436,788, Mar. 2.
Cutter: *See*—
Circular cutter.
Cutter for trees, Underground. W. O. Taylor. 2,437,176, Mar. 2.
Cycle or like locking mechanism. A. Milwain. 2,437,112, Mar. 2.
Decorating apparatus. W. H. Emerson. 2,437,224, Mar. 2.
Dehydration process. R. Johnson. 2,436,864, Mar. 2.
Delayed action electric switch. P. A. and W. R. Nelson. 2,437,037, Mar. 2.
Demethylation of hydrocarbons in presence of water. V. Haensel. 2,436,923, Mar. 2.
Derivatives of 3-oxo-4-hydroxy-thiophan and process for the manufacture thereof. P. Karrer. 2,436,865, Mar. 2.
Detachable electrical connector. E. W. Breisch. 2,436,914, Mar. 2.
Device for discriminating between fixed and moving objects. R. E. Rutherford. 2,437,173, Mar. 2.
Device for simultaneously filling and weighing bags. E. W. Vredenburg. 2,436,983, Mar. 2.
Dial lock. H. E. Goldstine and O. F. Voigt. 2,436,921, Mar. 2.
Dielectric composition comprising polychloroprene, wax, age resistor, and antioxidant. L. P. Gould and J. W. Whiteside. 2,436,885, Mar. 2.
Dipping machine. L. E. Maquat. 2,437,109, Mar. 2.
Dodecylamine salt of 2-mercaptobenzothiazole and making the same. A. Minich. 2,437,170, Mar. 2.
Double reversible film developing hanger. E. S. Edelhart. 2,436,882, Mar. 2.
Drainage system for stables. W. W. Riebli. 2,437,210, Mar. 2.
Drier: *See*—
Adjustable hose drier.
Drill press. R. M. Jones. 2,436,964, Mar. 2.
Drive control mechanism for motor vehicles and detent device therefor. A. W. Bonham, Jr. 2,436,912, Mar. 2.
Driving bushing, Sealed. W. M. Howser. 2,436,996, Mar. 2.
Dryer: *See*—
Adjustable hose drier.
Ear protector. R. H. Salisbury and E. M. Oehser. 2,437,049, Mar. 2.
Electric combination lock. A. E. Joel, Jr. 2,436,809, Mar. 2.
Electric condenser and making the same. F. D. Schottland. 2,437,212, Mar. 2.
Electric control circuit. G. Belfils. 2,437,066, Mar. 2.
Electric control system. E. H. Haug. 2,436,803, Mar. 2.
Electric current interrupter. S. O. Fiedler and J. Bjorksten. 2,437,225, Mar. 2.
Electric soldering apparatus. H. J. Braner. 2,437,151, Mar. 2.
Electrical cable. A. L. Wilson. 2,436,984, Mar. 2.
Electrical connector. E. J. Allen. 2,437,180, Mar. 2.
Electrical discharge device employing a pool-type cathode. H. E. Zuvers. 2,437,146, Mar. 2.
Electrical follow-up system. E. J. Isbister. 2,436,807, Mar. 2.
Electrical indicating apparatus and circuit closer therefor. J. L. Dodson. 2,437,018, Mar. 2.
Electrical soldering device with attachment. U. N. Hensley. 2,436,887, Mar. 2.
Electrode assembly for moisture meters. A. L. Smith. 2,437,134, Mar. 2.
Electronic counting chain with decimal indicators. I. E. Grosdoff. 2,436,963, Mar. 2.
Electronic motor control circuits. G. A. Waldie. 2,437,140, Mar. 2.
Electronic system for differentiating voltage waveforms. W. A. Higinbotham. 2,436,891, Mar. 2.
Enamel, Superopaque. H. D. Prior. 2,436,825, Mar. 2.
Engine: *See*—
Internal-combustion engine.
Ether-esters of organic hydroxy diphenyl acetic acid and manufacture of same. A. L. Morrison and M. Königstein. 2,437,035, Mar. 2.
Exercising apparatus. P. A. Bailleaux. 2,436,987, Mar. 2.
Fairlead for cables, ropes, and the like. E. B. Magee. 2,436,894, Mar. 2.
Fastener for tying elements. A. A. Ohler. 2,436,935, Mar. 2.
Feeder: *See*—
Baby feeder. Lehr feeder.
Feeding and gauging mechanism. R. E. J. Nordquist. 2,436,821, Mar. 2.
Feeding device for multiple blade bread slicing machines. C. H. Petskyes. 2,437,124, Mar. 2.
Ferrous metal supported zinc oxide-bismuth oxide catalyst. V. F. Mistretta. 2,436,970, Mar. 2.
Filler, Valve bag. W. R. Peterson. 2,437,172, Mar. 2.
Filling machine. C. E. Kerr. 2,436,812, Mar. 2.
Filter media, Wash resistant. H. L. Davis and L. R. B. Hervey. 2,437,082, Mar. 2.
Fish dressing machine. P. Danielsson. 2,437,081, Mar. 2.
Fixture, Gear grinding. J. D. Rovick. 2,436,902, Mar. 2.
Flatiron, Electric. L. H. Snyder. 2,436,943, Mar. 2.
Flexible connecting rod. F. L. Van Weenen and W. H. Stigter. 2,436,908, Mar. 2.
Fluid cooled four-way valve. F. M. Wolf. 2,437,144, Mar. 2.
Fluid coupling. R. C. Zeidler. 2,436,911, Mar. 2.
Fluid drive for motorcycles. F. C. Lawson. 2,436,893, Mar. 2.
Fluid operable short stroke device. V. S. Shaw. 2,437,131, Mar. 2.
Fly sprays comprising an N-alkyl-cinnamide and D D T. S. I. Gertler and H. L. J. Haller. 2,436,920, Mar. 2.
Fly sprays comprising an N-alkylphthalimide and D D T. S. I. Gertler and H. L. J. Haller. 2,436,919, Mar. 2.
Folding electric clothes presser, Portable. S. Kronhaus. 2,436,998, Mar. 2.
Food product and producing same. R. Lee. 2,437,104, Mar. 2.
Foot leveler. C. H. Stemmons. 2,437,136, Mar. 2.
Forming and shearing device. E. M. Hunt. 2,436,806, Mar. 2.
Fractionation of lacteal liquids. F. K. Daniel. 2,437,080, Mar. 2.
Friction clutch. C. B. Spase. 2,436,874, Mar. 2.
Friction shock absorber for railway draft riggings. G. E. Dath. 2,436,917, Mar. 2.
Fuel injection pump. D. J. Deschamps, D. C. Clarke and F. E. Ferguson. 2,436,797, Mar. 2.
Fuel, Producing motor. W. G. Scharmann and F. T. Barr. 2,436,938, Mar. 2.
Fuel tank gage. W. McCandless. 2,437,203, Mar. 2.
Fulcrum for lever mechanisms, Adjustable. F. B. Copeland. 2,436,916, Mar. 2.
Fuse for antitank mines. J. B. Traylor. 2,436,837, Mar. 2.
Gage: *See*—
Fuel tank gage. Pivoted jaw gage.
Gamma globulins from human blood serum, Recovering. J. W. Williams and H. F. Deutsch. 2,437,060, Mar. 2.
Gas turboelectric locomotive. H. Weier. 2,437,011, Mar. 2.
Gauge: *See*—
Fuel tank gage. Pivoted jaw gage.
Gear mechanism. J. Dunlop. 2,436,798, Mar. 2.
Gear shifting mechanism for grain drills or the like. W. A. Hyland. 2,437,094, Mar. 2.
Generator: *See*—
Modulated saw-tooth sweep generator.
Getter structure. A. J. King. 2,437,097, Mar. 2.
Glass beads, Forming. S. W. Neldorf. 2,436,819, Mar. 2.
Glide path system for aircraft. H. P. Williams. 2,436,846, Mar. 2.
Glyceride oil refining with foots softening agent. B. Clayton. 2,437,075, Mar. 2.
Gopher trap. J. M. Abeel. 2,436,985, Mar. 2.
Grating and making the same. T. Collins. 2,437,186, Mar. 2.
Green peas, Treatment of. M. E. Dunkley. 2,437,155, Mar. 2.
Grenade, Hand. T. Petersén. 2,437,001, Mar. 2.
Grinding or like machines. H. Livingstone and W. E. Rogers. 2,437,106, Mar. 2.
Guard, Shoe cleaning. H. Cronin. 2,436,953, Mar. 2.
Gun barrel lock. C. G. Swebilius. 2,437,137, Mar. 2.
Gyroscopic flight indicating instrument. T. O. Summers, Jr. 2,437,175, Mar. 2.

Hammer, Dental and surgical. W. A. Arnesen, B. Hertweck, and S. W. Doty. 2,437,014, Mar. 2.
Handle and closure means for handbags, Combination. L. Krupp. 2,437,099, Mar. 2.
Hanger: *See*—
Double reversible film developing hanger.
Harvester, Celery. W. C. Silva. 2,436,831, Mar. 2.
Haying machine. P. M. Thorns. 2,437,007, Mar. 2.
Heat detection device. J. Evans. 2,437,085, Mar. 2.
Heat sealing method. H. F. Waters. 2,437,057, Mar. 2.
Heated cathode, Indirectly. R. E. Trimble. 2,436,907, Mar. 2.
Helicopter lifting screw operating mechanism. A. A. Locke. 2,437,165, Mar. 2.
High density beam tube. K. Spangenberg, L. M. Field, and R. Helm. 2,436,833, Mar. 2.
High dielectric composition and making same. E. Wainer. 2,436,839, Mar. 2.
Hinge. J. J. Glanz. 2,437,192, Mar. 2.
Holder: *See*—
Bag holder.
Hook: *See*—
Cargo hook.
Hydraulic circuit for halting reciprocable rams. L. C. Cole. 2,437,077, Mar. 2.
Hydraulic control system for pump control, Mechanically actuated. J. A. Muller and W. R. Tucker. 2,437,115, Mar. 2.
Hydraulic hoist system. G. A. Kane. 2,437,161, Mar. 2.
Hydraulic speed control apparatus. W. R. Tucker. 2,437,139, Mar. 2.
Hydrocarbon concentration in soil samples, Determination of. E. E. Roper. 2,437,045, Mar. 2.
Hydrocarbon conversion process. J. A. Crowley, Jr., and O. G. Hayes. 2,437,222, Mar. 2.
Hydrogenation of carbon monoxide. E. E. Sensel and R. A. Beck. 2,437,051, Mar. 2.
Ignition system. B. H. Short. 2,436,905, Mar. 2.
Illuminated sign. A. R. Warner. 2,437,009, Mar. 2.
Illuminating device. J. D. Hamilton. 2,436,995, Mar. 2.
Implement, Ground working. M. L. Williams. 2,437,059, Mar. 2.
Index device. R. B. Larter. 2,437,102, Mar. 2.
Indicator: *See*—
Match draw indicator.
Inflatable orthopedic shoulder pad. L. S. Tatal. 2,437,054, Mar. 2.
Inhaler. J. B. Biederman. 2,436,877–8, Mar. 2.
Injection molding machine spreader. N. Lester. 2,436,869, Mar. 2.
Ink, Printing. R. A. Denton. 2,436,954, Mar. 2.
Ink, Typographic. F. W. Cray. 2,436,791, Mar. 2.
Instrument chart plate support, Measuring. C. B. Moore. 2,436,971, Mar. 2.
Insulating material containing cyclized rubber, a polyolefine, and polystyrene. A. J. Warner and M. Bakst. 2,436,842, Mar. 2.
Integrator. A. Wharton. 2,437,178, Mar. 2.
Internal-combustion engine. F. J. Culbert. 2,436,855, Mar. 2.
Invalid pad. W. T. Simpson. 2,437,006, Mar. 2.
Isomerization of saturated hydrocarbons. R. E. Sutherland. 2,436,944, Mar. 2.
Jack: *See*—
Lifting jack.
Kite. W. A. Nowka. 2,437,038, Mar. 2.
Knitting machine. F. M. Shea. 2,436,904, Mar. 2.
Knurling tool. H. Boyar. 2,436,950, Mar. 2.
Knurling tool. A. R. Ross. 2,436,975, Mar. 2.
Laundry bag provided with identifying legends, Compartmented. H. F. Baxter. 2,437,149, Mar. 2.
Lehr feeder. A. F. Tremblay. 2,437,214, Mar. 2.
Level control device, Different density fuel. L. V. McCarty. 2,436,933, Mar. 2.
Lifting jack. C. A. Crane. 2,437,078, Mar. 2.
Lighter, Electric fuse. A. M. Cohan. 2,437,153, Mar. 2.
Loader, Pneumatic grain. F. H. Theis. 2,437,138, Mar. 2.
Loader, Shovel. G. W. Way. 2,437,010, Mar. 2.
Lock: *See*—
Dial lock.
Gun barrel lock.
Electric combination lock.
Lock with rotating tumbler discs, Combination. V. J. M. Eras. 2,436,859, Mar. 2.
Locker, Food. H. E. Wheeler and D. A. Forberg. 2,437,215, Mar. 2.
Locking containers on vehicles. R. A. Norbom. 2,436,972, Mar. 2.
Loom creel and adjusting means therefor, Portable. L. E. Bryant. 2,437,070, Mar. 2.
Lubricating device, Twister ring. D. K. Pope. 2,437,208, Mar. 2.
Luminescent tube system and apparatus. J. H. Bridges. 2,436,951, Mar. 2.
Machine for cutting holes in pipes and similar articles. H. Hatten. 2,437,025, Mar. 2.
Machine for molding concrete units. A. E. Ruegg. 2,437,003, Mar. 2.
Machine for setting up box blanks. H. W. Gregoire. 2,437,157, Mar. 2.
Magnetic frequency changer. H. M. Huge. 2,437,093, Mar. 2.
Magnetic inspection apparatus. T. De Forest. 2,436,918, Mar. 2.
Magnetic retaining means for can lids and the like. J. Webb. 2,437,234, Mar. 2.
Mailbox. C. F. Swanson. 2,437,053, Mar. 2.
Map, Global. I. Fisher. 2,436,860, Mar. 2.
Massaging device, Nonvibratory. A. R. Marty. 2,436,969, Mar. 2.
Match draw indicator. A. R. Lovelock. 2,437,167, Mar. 2.
Material projecting apparatus. R. A. Prosser and A. S. Nichols. 2,437,042, Mar. 2.
Measuring apparatus in combination with a twisting machine, Length. E. J. Larsen and O. G. Nelson. 2,437,101, Mar. 2.
Mechanism for machine guns, Shell ejecting. F. I. Rataiczak. 2,436,937, Mar. 2.
Metal stretching press. A. M. Greene, Jr., and W. Ernst. 2,437,092, Mar. 2.
Meter: *See*—
Photographic exposure meter.
Microphone assembly. G. M. Giannini. 2,437,088, Mar. 2.
Modulated saw-tooth sweep generator. W. A. Higinbotham. 2,436,890, Mar. 2.
Modulation, Phase. L. Rubin. 2,437,047, Mar. 2.
Modulation, Phase and frequency. E. K. Stodola. 2,436,834, Mar. 2.
Modulation utilizing a cathode follower, System of. J. M. Giessner. 2,436,802, Mar. 2.
Motor: *See*—
Shaded-pole synchronous motor.
Synchronous electric clock motor.
Motor control, Two-phase. J. H. Andresen, Jr. 2,437,064, Mar. 2.
Motor reducer unit. A. Mackmann. 2,436,930, Mar. 2.
Mount for gun sights. H. A. Williams. 2,436,948, Mar. 2.
Mounting: *See*—
Rotary valve mounting.
Yieldable bogie spring mounting.
Multiple blade bread slicing machines, Blade mounting. C. H. Petskeyes. 2,437,123, Mar. 2.
Multiple reciprocating blade bread slicing machines, Knife frame attaching. C. H. Petskeyes. 2,437,122, Mar. 2.
Multivibrator. B. B. Jacobsen and M. M. Levy. 2,436,808, Mar. 2.
Nondiffusing 1-phenyl-5-pyrazolone couplers for color photography. W. Zeb, K. Bitterfeld, W. Schneider, and A. Fröhlich. 2,437,063, Mar. 2.
Nonskid device for shoes. B. With. 2,437,143, Mar. 2.
Nonskid device for tires. G. T. Prevost and J. M. Downes. 2,437,040, Mar. 2.
Nonspill vent for storage batteries. J. L. Woodbridge. 2,437,145, Mar. 2.
Nut-assembling machine. K. Eisele. 2,436,858, Mar. 2.
Oil filter screen. G. van Doehren. 2,437,008, Mar. 2.
Oil, Hydrocarbon fuel. W. A. Proell. 2,437,041, Mar. 2.
Oil pan and internal engine cleaner, Combination. A. Adams. 2,437,013, Mar. 2.
Olefinic hydrocarbons, Recovery of. R. C. Morris and T. W. Evans. 2,437,230, Mar. 2.
Ortho-tolidine tablet composition. J. L. Leitch. 2,436,814, Mar. 2.
Outrigger type support. L. P. Frost. 2,436,799, Mar. 2.
Overload release clutch. P. L. A. Vergne. 2,436,947, Mar. 2.
Package. M. T. Marler. 2,437,110, Mar. 2.
Packaging machinery. J. A. Kay. 2,437,198, Mar. 2.
Packing, Piston. A. J. Mummert and H. P. Phillips. 2,436,896, Mar. 2.
Pad: *See*—
Inflatable orthopedic shoulder pad.
Invalid pad.
Painter's accessory. E. F. Hansen. 2,436,924, Mar. 2.
Paraffin dislodging tool. A. W. Hanke. 2,437,193, Mar. 2.
Patch for garment pockets, Repair. L. F. Buck. 2,436,879, Mar. 2.
Perforator, Practical paper. J. Gasio. 2,436,801, Mar. 2.
Peripheral drain means for laundry machines. E. A. Wheeler. 2,437,179, Mar. 2.
Phonograph pickup, Capacity-type. F. B. Tatro. 2,436,946, Mar. 2.
Photographic exposure meter. J. A. Legris. 2,436,966, Mar. 2.
Photo-printing apparatus. N. B. Mears. 2,437,229, Mar. 2.
Piano action. F. C. Socin. 2,436,875, Mar. 2.
Piezo crystal plates, Mounting. H. M. Bach. 2,437,218, Mar. 2.
Pile-driving mandrel, Collapsible. E. W. Riemenschneider and D. T. Greth. 2,437,043, Mar. 2.
Pillow filling machine with suction creating means. D. Huttner and R. S. Kramer. 2,437,196, Mar. 2.
Pintle porting. G. M. Geiger and W. Ernst. 2,437,089, Mar. 2.
Pipe coupling. E. M. Dons and J. V. Stevens. 2,437,083, Mar. 2.
Piston construction. J. C. Vroman. 2,437,056, Mar. 2.
Pivoted jaw gage. P. W. Johnson. 2,437,160, Mar. 2.

Power installation, Sea wave. P. F. Danel. 2,436,793, Mar. 2.
Pressure operated valve. W. O. Lum. 2,436,815, Mar. 2.
Plank, Spring. R. Leppla. 2,437,033, Mar. 2.
Plastic injection, Method and apparatus for. H. F. MacMillin, W. Ernst, and G. A. Waldie. 2,436,999, Mar. 2.
Pleat holding or clamping device. S. Esecson. 2,437,084, Mar. 2.
Plow, Snow. P. H. Oppegaard. 2,437,116, Mar. 2.
Plug: *See*—
Spark plug.
Plunger switch. E. W. Rickmeyer. 2,436,898, Mar. 2.
Polishing machine. G. H. Meinzer. 2,437,034, Mar. 2.
Polymerization of acrylic acid nitriles. R. A. Jacobson, 2,436,926, Mar. 2.
Polymerization of olefinic hydrocarbons. C. B. Linn. 2,436,929, Mar. 2.
Polymerization of sugars. G. J. Leuck. 2,436,967, Mar. 2.
Poppet valves, Method of and apparatus for making. R. A. Kempe. 2,436,928, Mar. 2.
Posting board, Information. W. Thorpe. 2,436,836, Mar. 2.
Potassium stannate, Preparing. H. W. Richter. 2,436,974, Mar. 2.
Potassium sulphate manufacture. J. A. Barr and W. A. Smith. 2,437,182, Mar. 2.
Preparation of chlorine. E. V. Murphree. 2,436,870, Mar. 2.
Preparation of fluorine hydrocarbon compounds. A. L. Barney. 2,437,148, Mar. 2.
Press: *See*—
Drill press.
Metal press.
Press having slidable platen supports provided with clamping faces, Metal-stretching. R. J. Lindsey. 2,437,105, Mar. 2.
Prevention of afterburning in fluidized catalytic cracking processes. L. S. Kassel. 2,436,927, Mar. 2.
Primer. E. D. Regad and A. T. Anderson. 2,436,826, Mar. 2.
Production of polycyclic hydrocarbons. W. J. Mattox. 2,436,932, Mar. 2.
Production of print pictures on print bodies. E. H. Schwarz. 2,437,005, Mar. 2.
Projection of stereoscopic images. E. H. Wright. 2,437,061, Mar. 2.
Protective apparatus for preventing accumulation of ice on airfoils. E. E. Heston. 2,436,889, Mar. 2.
Protector: *See*—
Ear protector.
Protector for nursing mothers. M. M. Stevens. 2,436,977, Mar. 2.
Pump: *See*—
Centrifugal pump.
Fuel injection pump.
Rack fastening for free-piston units. R. J. Hooker. 2,437,026, Mar. 2.
Radio antenna. C. B. Watts, Jr., and L. Himmel. 2,436,843, Mar. 2.
Radio indicating system. R. B. Hoffman. 2,436,805, Mar. 2.
Radio paging for vehicles. R. K. Potter. 2,436,824, Mar. 2.
Radius-angle former. I. Sneva. 2,436,873, Mar. 2.
Ravioli machine. S. Marino. 2,437,202, Mar. 2.
Receptacle: *See*—
Colostomy receptacle.
Remote indicating compass. A. T. Sinks. 2,437,132, Mar. 2.

Timing apparatus. L. A. Marlhart. 2,437,168, Mar. 2.
Tin from stannic chloride, Recovering. Y. E. Lebedeff. 2,436,868, Mar. 2.
Tire chain. P. A. Jasmer. 2,437,031, Mar. 2.
Tire cord and manufacture. G. P. Standley and K. M. McLellan. 2,436,979–80, Mar. 2.
Titanium ores, Processing of. E. N. Kramer. 2,437,164, Mar. 2.
Toggle clamp. J. J. Sendoykas. 2,436,941, Mar. 2.
Tonsillectome. O. C. Daniels, Sr. 2,436,989, Mar. 2.
Tool: *See*—
Knurling tool. Paraffin dislodging tool.
Tool attachment, Machine. E. L. Conkey. 2,437,952, Mar. 2.
Tool for food tendering machines, Cleaning. O. Brownsey. 2,437,069, Mar. 2.
Tool for hollow rivets, Upsetting. R. H. Gill. 2,437,191, Mar. 2.
Toy, Educational. I. Gold. 2,437,090, Mar. 2.
Toy ferris wheel. C. McBride. 2,437,000, Mar. 2.
Toy, Sound producing. J. P. Gowland. 2,436,886, Mar. 2.
Tracer, Manually controlled. H. W. Gale. 2,437,190, Mar. 2.
Transformer with regulatable leakage reactance. E. Fries. 2,437,021, Mar. 2.
Transmission system and method. W. M. Sharpless. 2,436,830, Mar. 2.
Transporting means, Vehicle. H. L. Ekin and J. O. Young. 2,436,959, Mar. 2.
Trap: *See*—
Gopher trap.
Trap. C. J. Ford. 2,437,020, Mar. 2.
Trap for filter provided with magnetic means, Sediment. P. G. Cox and H. A. Hansen. 2,437,221, Mar. 2.
Trolley pole positioning means. J. J. Slomer. 2,437,213, Mar. 2.
Tube: *See*—
High density beam tube.
Ultra high frequency electric discharge device. W. J. Scott and C. J. Milner. 2,437,130, Mar. 2.
Unit for variable pitch propellers, Self-contained. A. G. Forsyth. 2,437,189, Mar. 2.
Unit strips, Making. A. L. Hess and H. G. Denyven. 2,436,888, Mar. 2.
Valve: *See*—
Fluid cooled four-way valve. Pressure operated valve.
Valve arrangement for halting reversible rams to prevent over-stroking thereof. B. D. Ashbaugh. 2,436,986, Mar. 4.
Valve for aircraft cooling systems. J. E. Eshbaugh. 2,437,187, Mar. 2.
Valve safety shutoff, Gas. E. R. Koppel. 2,437,163, Mar. 2.
Variable field range and view finder. E. K. Kaprelian. 2,437,032, Mar. 2.
Variable pitch propeller unit, Self-contained. A. G. Forsyth. 2,437,188, Mar. 2.
Variable speed drive. H. E. Page. 2,436,936, Mar. 2.
Variable-speed transmission. W. K. Rieber. 2,437,128, Mar. 2.
Vehicle step, Retractable. C. K. Gabriel. 2,436,961, Mar. 2.
Volume control. E. G. Lodge. 2,437,166, Mar. 2.
Wash resistant filter media. H. L. Davis and L. R. B. Hervey. 2,437,082, Mar. 2.
Washing machine with divided container and axial inlet. A. Miller. 2,437,169, Mar. 2.
Washing machine with pivotally supported outer and inner shells and power means on the outer shell for rotating the inner shell. H. C. Ellis. 2,436,883, Mar. 2.
Welding apparatus. S. M. Humphrey. 2,436,863, Mar. 2.
Welding rod. R. K. Lee. 2,436,867, Mar. 2.
Wheel: *See*—
Resilient wheel. Toy ferris wheel.
Whistle. R. Y. Grant, Jr. 2,437,024, Mar. 2.
Wind screen. G. D. Wyble. 2,437,062, Mar. 2.
Wire-transposing device. R. Case. 2,436,789, Mar. 2.
Yieldable bogie spring mounting. J. W. Heiney. 2,437,158, Mar. 2.

CLASSIFICATION OF PATENTS

ISSUED MARCH 2, 1948

In view of the fact that the issue is being checked weekly by the Classification Division, the class and subclass in this list are correct as of this date. Where there is a discrepancy between the classification given in the patent head and the classification in this list, the classification of this list governs.

NOTE.—First number—class, second number—subclass, third number—patent number

DECISIONS IN PATENT AND TRADE-MARK CASES

U. S. Court of Customs and Patent Appeals

IN RE EVANS

No. 5356. Decided November 29, 1947

[164 F.2d 621; 76 USPQ 115]

1. PATENTABILITY—METHOD—APPLICATION OF PRIOR ART TO CLOSELY RELATED MATERIAL.

Though no art was cited showing that any one prior to appellant ever suggested that a process useful in plasticizing crude rubber would also be useful in plasticizing vulcanized rubber scrap, *Held* that the two substances—rubber and rubber scrap—are so closely related in nature that there could be nothing inventive in applying the reference process, defined broadly in the specification as a process of treating rubber, to the treatment of rubber scrap.

2. SAME—METHOD OF PLASTICIZING VULCANIZED RUBBER SCRAP.

Certain claims to a method of plasticizing vulcanized rubber scrap *Held* unpatentable over the prior art.

APPEAL from the Patent Office. Serial No. 440,659.

AFFIRMED.

Pennie, Edmonds, Morton and Barrows (*R. T. McLean* and *C. M. Fisher* of counsel) for Evans.

W. W. Cochran (*E. L. Reynolds* of counsel) for the Commissioner of Patents.

GARRETT, *P. J.*:

This is an appeal from the decision of the Board of Appeals of the United States Patent Office affirming the Primary Examiner's rejection of all the claims, numbered 1 to 8, inclusive, of appellant's application for patent for a method of "Plasticizing of Vulcanized Rubber Scrap." No product claims are involved.

The brief on behalf of appellant states:

The subject matter of the invention relates to the reclaiming or plasticizing of vulcanized rubber scrap to convert it from the rubbery material with which everyone is familiar to a plastic material which can be compounded with other ingredients to produce a mixture which can be formed into shaped articles and vulcanized to produce rubber articles.

In the brief of the Solicitor for the Patent Office we find a terse statement concerning the process disclosure which reads:

The application here involved • • • relates to the plasticizing of vulcanized rubber and discloses a process which involves mechanically working vulcanized rubber scrap at comparatively low-temperatures and under oxidizing conditions, with an acid and a so-called non-accelerating plasticizing sulfide. An extended list of such sulfides is given and aryl sulfides, especially phenol sulfides, and specifically dicresyl sulfide are indicated as suitable. An accelerator and an oxidizing material may also be used if desired.

Claims 1, 3, 5, and 6 are the broad claims. Of these, claim 1 is illustrative. It reads:

1. The method of plasticizing vulcanized rubber scrap which comprises mechanically working the material under oxidizing conditions with small amounts of admixed acid material and a non-accelerating plasticizing sulfide at a temperature below about 180° F.

The specific or narrow claims 2, 4, 7, and 8 are illustrated by claim 2, which reads:

2. The method of plasticizing vulcanized rubber scrap which comprises mechanically working the material under oxidizing conditions with small amounts of admixed acid material and a phenol sulfide at a temperature below about 180° F.

It will be observed that illustrative claim 1 calls for "a non-accelerating plasticizing sulfide" of which many kinds are named in the specification, and that claim 2 specifies "a phenol sulfide." This limitation is present in claims 4 and 7. Claim 8 specifies "a dicresyl sulfide," which elsewhere in the record is said to be a "a sulfide of a particular phenol, cresylic acid."

All eight of the claims were rejected by the Examiner as lacking invention over any one of three patents, viz.: Seaman, 1,996,001, March 26, 1935; Williams et al., 2,191,266, February 20, 1940; Castello, 2,211,592, August 13, 1940.

He further rejected claims 1 to 5, inclusive, as being "too broad and inclusive," and claims 1, 3, and 5 as being "too broad and indefinite." All the foregoing grounds were affirmed by the Board.

An additional ground of rejection of claims 6, 7, and 8, which are claims of the "Markush" type, was applied by the Examiner; to wit, "as being superfluous and unnecessary," but the Board expressly overruled this additional ground, and it is not before us for consideration. So, it appears that claims 6, 7, and 8 stand rejected on the one ground of lack of invention over the prior art cited.

As has been indicated, the holding below is to the effect that all eight of the claims are rejectable on any one of the three references. In other words, there is no combination of references but each of the patents was regarded by the Examiner and the Board as being of itself a complete anticipation, or, at least, it was held that appellant presents nothing patentable over any one of them.

The Examiner analyzed and applied each of the references. The Board devoted most attention to the Castello patent, one or two phases of Seaman's disclosure being referred to also. The only reference to Williams et al. is found in a statement reading:

The patents to Seaman and Williams [et al.] are to an extent cumulative to the Castello patent and also deny patentability in the claims as pointed out in the statement of the Primary Examiner.

This, of course, constitutes blanket approval of the rejection on Seaman and Williams et al., but for reasons appearing from the presentation of the case before us we think more attention may properly be given to the disclosure of Williams et al.

Vol. 608 • No. 1 Tuesday, March 2, 1948 Price $16 per year

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscriptions, $16.00 per annum, including annual index, $18.75; single numbers, 35 cents each.

PRINTED COPIES OF PATENTS are furnished by the Patent Office at 25 cents each; copies of TRADE-MARKS and DESIGNS at 10 cents each. Address orders to the Commissioner of Patents, Washington 25, D. C.

CIRCULARS OF GENERAL INFORMATION concerning PATENTS or TRADE-MARKS will be sent without cost on request to the Commissioner of Patents, Washington 25, D. C.

which lists some 50 or more sulfides asserted to be suitable for use in plasticizing rubber.

The fact is that appellant in his brief and in his oral argument before us practically conceded that all the broad claims, that is 1, 3, 5, and 6 read on Williams et al., his brief saying:

> The term "non-accelerating plasticizing sulfide" used in the broader claims on appeal is broad enough to comprehend the acid sulfides of the Williams patent.

The term quoted is used in haec verba in claim 2; in claim 5 the term is "a plasticizing sulfide"; and in claim 6 "an aryl sulfide" is mentioned. As has been stated, claim 6 is of the "Markush" type.

The Williams et al. patent, as is pointed out in the brief of the Solicitor for the Patent Office, "suggests operation at room temperature or at temperatures 'above about 50° C. [122° F.]'," which meets the requirement of all the appealed claims for temperatures "below about 180° F." The patent also states, in effect, that the working of the material being processed takes place in the presence of oxygen which, as said by the Solicitor, "would suggest the addition of an oxidizing agent if the atmospheric oxygen were found to be insufficient."

The Williams et al. patent, however, appears to be for the treatment of crude rubber (although rubber is frequently referred to broadly in the specification), while the specification and claims of appellant's application are limited to plasticizing vulcanized rubber scrap.

The Examiner held, in substance (and the Board did not, expressly or impliedly, reverse the holding), that there was no invention in applying to vulcanized rubber scrap in order to reclaim it, the process applied to crude rubber "to produce," as stated by Williams et al., "a more plastic product." He held that there would be no invention because the peptizing (that is, the plasticizing) action of the sulfides would be the same in both cases.

Appellant challenges the correctness of the holding, and in the brief filed on his behalf asserts:

> In this holding the Examiner assumed an equivalence between the plasticizing or softening of crude rubber and the plasticizing or reclaiming of vulcanized rubber which has no basis in the prior art, and, therefore, affords an unsound premise for the Examiner's action. There is in this record nothing to indicate that anyone had ever thought that any material useful for softening crude rubber could or would be useful for plasticizing or reclaiming rubber scrap, prior to the suggestion in the present application that non-accelerating organic sulfides generally are useful for reclaiming rubber scrap, the Williams patent having previously suggested certain sulfides as useful for plasticizing crude rubber. This is another instance in which the Patent Office has in effect used appellant's teaching as a reference against him.

Before passing upon the issue relating to the Williams et al. patent, we deem it proper to look to the Castello patent which, like the application of appellant, is limited to the treatment of vulcanized rubber, such as worn rubber tires, inner tubes, mechanical goods, etc., for the purpose of reclaiming the rubber and putting it into a plastic condition suitable for use in the manufacture of new rubber articles.

Appellant's brief says of the Castello patent (page reference omitted):

> This patent • • • describes the reclaiming of vulcanized scrap rubber by working it in the presence of a small quantity of a vulcanization accelerator, that is, one of the materials (of which a large number are known) commonly incorporated in rubber stocks to be vulcanized to promote the speed of the vulcanization or reduce the temperature required. The patent describes the use of temperatures below 180° F. for the working, and also describes the use of various materials in addition to the vulcanization accelerator, including rosin, stearic acid, and other materials, *some of which may be regarded as acids within the scope of the claims of the present application.* [Italics supplied.]
>
> • • • • • • •
>
> The distinction between what is described in this patent, and the subject matter broadly claimed in the present application, lies in the use of a non-accelerating sulfide in the process of the application and the use of a vulcanization accelerator, which in some instances may be a sulfide, but not a non-accelerating sulfide, in the process of the patent.

The Board compared the patent with the application, pointing out that the mastication process of the patent is performed in the air, and, therefore, under oxidizing conditions; that rosin, one of the ingredients named by applicant, which in the patent is admixed with the rubber scrap, is an acid material; that an alternative for rosin disclosed in Example III of the patent is a higher fatty acid (specifically stearic acid) which meets the "rosin" and "higher fatty acid" disclosures of the application; and that the patent suggests the use of various sulfides.

The Board then said:

> The methods recited in the claims on appeal, therefore, differ from the method disclosed in the Castello patent only in two respects, one being that the sulfide used is "a non-accelerating plasticizing sulfide"; "a phenol sulfide"; "a plasticizing sulfide"; "an aryl sulfide" or "a dicresyl sulfide" and the other being that "an accelerator of vulcanization" is specified as an additional ingredient of the mixture according to claims 3 and 4. We do not find that these differences confer patentability on the claims. The prior art, as exemplified by the Castello patent for example, discloses the use of sulfides as plasticizers in the process claimed and the selection as plasticizers of sulfides which are "non-accelerating" does not amount to invention. The application on appeal discloses an exceeding extensive list of sulfides which may be used and this emphasizes the lack of invention in the substitution of any one of them for the sulfide used in the prior art process. We are not impressed with the allegation that a "non-accelerating" sulfide should be selected since applicant states that in addition to excluding sulfides which contribute accelerating properties, an accelerator of vulcanization may also be added.

So far as appellant's use of a vulcanization accelerator (specified only in claims 3 and 4) is concerned, the Examiner stated: "• • • it is common to add sulfur accelerator, etc. to reclaimed rubber," and this statement of the Examiner does not appear to be challenged.

Both the Williams et al. and the Castello patents, as of course, were applied by the tribunals of the Patent Office to both the broad and narrow claims of appellant. Reserving the narrow claims for later discussion infra, we state at this point that we share the view of the tribunals of the Patent Office, in regard to the broad claims, but it seems to us that the applicability of the Williams et al. patent to those claims is clearer than is the applicability of the Castello patent. Hence, we have given the former patent more notice than the Board gave it.

[1] We are not unmindful of the contention on behalf of appellant to the effect that no art has been cited showing that any one prior to appellant ever suggested that a process useful in plasticizing crude rubber would also be useful in plasticizing vulcanized rubber scrap, but it seems to us that the two substances—rubber and rubber scrap—are so clearly related in nature that there could be nothing inventive in applying the Williams et al. process, defined broadly in the specification as a process of "treating rubber," to the treatment of rubber scrap. Aside from this it may not be overlooked that the Castello process like that of appellant is limited to rubber scrap.

Appellant's brief states:

> The fact is, and it is common knowledge, that crude rubber has been plasticized or softened in rubber factories to permit the incorporation in it of the ingredients used to make rubber articles and has then been vulcanized, and that rubber scrap has been treated to produce a reclaimed product, and that these two operations have gone on on an enormous scale practically side by side for decades.

We doubt if judicial notice properly may be taken of the condition so described, but, even if it may, it may be pointed out that there is no showing in the record as to just what processes have been applied to the respective substances in the operations which have gone on "side by side for decades."

It is true that there are expressions in appellant's specification which may be construed to support the statement in appellant's brief that "reclaiming processes heretofore widely used for rubber scrap have been either the heater process or the digester process," but so far as we can determine from the record there is nothing to show that those processes might not be employed in the treatment of crude rubber. However, if it were shown that those particular heater and digester processes might not successfully be so used, it is not thought that this would demonstrate that the process of the Williams et al. patent would not work as effectively in the treatment of rubber scrap as it does in the treatment of crude rubber.

The Board rendered two decisions in the case, the second being in response to a request for reconsideration limited to the specific claims 2, 4, 7, and 8, the first three of which are limited to the use of phenol sulfide and the last to the use of dicresyl sulfide, which latter is itself said to be related to phenol.

It should be borne in mind that, as stated earlier in this decision in a quotation from the brief for appellant, appellant's contention with respect to the difference between his claimed invention and the Castello patent lies in his use (1) of a non-accelerating sulfide and (2) of a vulcanization accelerator, the latter of which already has been passed upon, supra.

As to the former, if we correctly understand appellant's position, it is that the sulfides disclosed by Castello are all accelerating sulfides. So far as the broad claims 1, 3, 5, and 6 are concerned, he does not make this contention with respect to the Williams et al. patent, but he does make it as to the narrow or specific claims 2, 4, 7, and 8, because phenol sulfides and dicresyl sulfides are not non-accelerating sulfides and Williams et al. do not name either of them.

The broad claims, we think, have been sufficiently discussed.

So far as the applicability of the prior art is concerned neither the Examiner nor the Board, in its first decision, separated the narrow claims from the broad claims for general discussion, but in its second decision the narrow claims were discussed at considerable length.

It will be borne in mind that appellant's contention as to the broad claims reading on the Williams et al. patent did not apply to the narrow claims 2, 4, 7, and 8.

[2] We deem it unnecessary to set forth the Board's discussion in full. Notwithstanding the fact that neither phenol sulfide nor dicresyl sulfide is designated eo nomine in any one of the reference patents, the Board held, in substance, that because of the broad disclosure by the prior art of the use of organic sulfides including sulfides and disulfides, so many of which are named in the different references "there would be no invention in selecting phenol sulfide or dicresyl sulfide" for use in the Castello process for plasticizing vulcanized rubber. The Board said further:

> There is nothing in the application on appeal to indicate any remarkable or critical action by the selection of phenol sulfide or dicresyl sulfide, which are included within the broad disclosure of the prior art, instead of one of the numerous sulfides specifically mentioned therein.
>
> The Primary Examiner has indicated in his statement that the "non-accelerating" function of phenol sulfide or dicresyl sulfide, in connection with vulcanizing unvulcanized rubber, is a function not related to its function as a plasticizing ingredient for vulcanized rubber and we find no error in such a position.

Appellant's arguments have been carefully considered but we are not convinced that the Board erred in its conclusion based upon the applicability of the prior art cited, and in view of this conclusion it is unnecessary to pass upon the rejection based upon breadth, and indefiniteness.

The decision of the Board of Appeals is affirmed.

AFFIRMED.

U. S. Court of Customs and Patent Appeals

IN RE METZNER

No. 5359. Decided November 29, 1947

[164 F.2d 618; 76 USPQ 119]

PATENTABILITY—PIN TYPE FEEDING MEANS.

Certain claims to a pin type feeding means for advancing a continuous strip of material *Held* characterized by novelty and usefulness, and *Held* that the Patent Office, on the prior art cited, was not warranted in rejecting the claims.

APPEAL from the Patent Office. Serial No. 433,915.

REVERSED.

Marston Allen (*Theodore Greve* of counsel) for Metzner.

W. W. Cochran (*J. Schimmel* of counsel) for the Commissioner of Patents.

BLAND, *J.*:

The Primary Examiner of the United States Patent Office rejected as unpatentable over certain prior art patents claims 1 to 20, inclusive (being all the claims in the application and all the claims on appeal here), of appellant's application for a patent relating to strip feeding means for writing and imprinting apparatus.

Appellant's invention involves an improvement in the feeding mechanism for the proper passage of

punctured paper strips through a paper feeding, record making device. The invention is described by the Examiner as follows:

The alleged invention relates to feeding units comprising a series of traveling pins or sprocket teeth mounted for both outward radial movement and movement normal to their path of travel, or for movement normal to their path of travel only for engaging marginal perforations in a continuous record receiving strip or a series of superposed record receiving strips and advancing them to a record receiving position or station. Movement of the pins or teeth normal to their path of travel is provided for the purpose of compensating for lateral expansion or contraction of the strip material due to variable atmospheric conditions or to inequalities in the manufacture of the marginally perforated strips.

It is pointed out by appellant that the twenty claims on appeal fall into three groups, claims 15, 6 and 7 being set forth in his brief as representative of each of the different groups. Appellant states that the combination defined by claim 15 provides for an arrangement whereby the individual pins "independently" of each other are "free" to move "laterally," that claim 7 calls for "elongated" slots in the margins of the paper and for "flat pins," and that claim 6 is modified by the addition of the feature that the feeding pins are also mounted for "radial" movement with reference to the pin carrier.

The Solicitor for the Patent Office states that the claims may be broadly divided into two groups, the first, consisting of claims 3, 4, 10 to 13, inclusive, and 15 to 20, inclusive, being directed to feeding pins laterally shiftable independently of each other, and the second, consisting of claims 1, 2, 5 to 9, inclusive, and 14, being drawn to cover the use of flat feeding pins.

With the above explanation, we regard claims 3 and 6 as illustrative of the appealed subject matter and they follow:

3. In a pin type feeding means for advancing a continuous strip of material having therein a succession of longitudinally spaced holes for engagement therein of traveling feeding pins, a traveling carrier, a series of spaced feeding pins mounted thereon for to and fro lateral motion transversely to their path of travel independently of each other and the carrier into agreement with succeeding holes in the strip simultaneously with their unison advancement by the travel of the carrier.

6. In a record making apparatus wherein continuous relatively adjustable superposed record strips each having a succession of longitudinally spaced record receiving areas are progressively aligned and registered at a record receiving position with like areas of another of the strips, and wherein each strip has therein a succession of longitudinally spaced elongated slots for progressive engagement of the strips with a series of traveling flat feeding pins by which the strips are advanced past a record receiving position, including a traveling series of relatively spaced flat pins engageable in corresponding narrow elongated slots in the strips for advancing the strips in unison with their travel motion and a carrier for said pins upon which the pins are mounted for limited individual lateral adjustment relative to the carrier by camming action of the teeth and strips as the teeth enter the slots thereof.

The references cited by the Patent Office tribunals in rejecting the appealed claims are as follows: Neth, 1,490,536, April 15, 1924; Sherman, 2,000,649, May 7, 1935; Sherman et al., 2,102,651, December 21, 1937; Ross, 2,118,016, May 17, 1938.

While there are two embodiments of the invention disclosed in appellant's application as defined by the appealed claims, it is our view that if any of the claims are allowable they are all allowable although there is a greater number of claims than is ordinarily presented under such circumstances.

It is explained in appellant's application that the expansion and contraction of paper strips which are employed for record purposes presents a troublesome problem. The strips are ordinarily accompanied by carbon paper, are sometimes of considerable width, and are used in tabulating and computing machines, addressographs, and other imprinting apparatus. It is pointed out that such expansion or contraction makes the pre-prepared holes in the paper come out of line, and, when passing over the feeding drum, the paper is frequently torn or disfigured by the pins on the drum.

The chief feature of appellant's invention is to make the pins on his drums have a floating or pivotal action so that they will fall into the holes in the paper and move the paper forward without disfiguring it, whereas if the pins are stationary or if they move only forward in the direction the drum turns the problem is not solved.

The patent to Sherman, 2,000,649, discloses a rotary drum provided with feed pins for engaging perforations in strip material. The pins are mounted in apertures in the drum and are projected into and withdrawn from the strip perforations by a stationary cam.

The patent to Sherman et al., 2,102,651, discloses a similar device with the modification that each pin has a spiral groove which results, when the pins are thrust outwardly, in each pin being given an enforced movement not only radially of the rotating body but also circumferentially thereof so as to advance the pin slightly in the feeding direction. The patentees describe no motion of the pin in a direction laterally from the motion of the paper as it passes over the drum.

Neth discloses pin wheels, having radially projecting tapered pins, supported upon and rotated by a shaft. One of the wheels is so mounted upon the shaft that it is capable of moving laterally toward and away from the other wheel.

Ross discloses a pin or sprocket wheel having flattened feed pins for engaging marginal perforations in strip material.

In rejecting the appealed claims, the Examiner said:

Claims 1 to 20 inclusive stand finally rejected as not being patentable over each of the patents to Sherman and Sherman et al. in view of Neth and Ross. It is the position of the Examiner that to provide in either the Sherman or Sherman et al. patents for limited lateral to and fro movement of the feeding pins * * * as, for example, by laterally elongating the apertures in the pin supporting drums or platens of those patents through which the pins project would not amount to invention in view of Neth. The latter discloses it to be old in the art to so mount feeding pins * * * which engage marginal perforations in record strip material for feeding purposes that they may be moved normal to their path of travel through contact with portions of the strip immediately surrounding the strip perforations to bring them in register with said perforations in the event the distance between the rows of perforations in the opposite marginal portions of the strip should vary for any reason whatsoever. Since the feed pins of the Sherman and Sherman et al. patents are separately or individually mounted on their supporting drum or platen each will obviously be capable of movement normal to its plane of rotation relatively to the other pins when the devices of these patents are modified in the manner proposed by the Examiner. Some of the claims call for flat pins whereas the feed pins of Sherman, Sherman et al. and Neth are shown as conical. However, the Ross patent teaches it to be old to use flat feed pins * * * for feeding marginally perforated material and there would be nothing patentable in view of the teaching of Ross in using flat feed pins in the Sherman and Sherman et al. device.

The Board, in its decision, stated:

The claims are drawn in broad terms, reciting capabilities rather than structure. A typical expression is that in claim 3—"mounted for to and fro lateral motion transversely . . .". The Examiner holds that the claims lack invention over the Sherman patents taken with Neth. It will be noted that the only distinction over the combination of references is to be found in the one word "individual."

We are of the opinion that the combination of references is a proper one, since it would be obvious to make one of the sprocket wheels of Sherman laterally adjustable as shown by Neth. However, to make individual pins of Sherman 2,102,651, individually shiftable laterally would require only changing the major axis of slot 52 from that direction permitting circumferential play to a direction permitting lateral play. It is again noted that the claims call only for the broad concept, rather than for any structure to accomplish this consideration.

We regard the 20 claims, notwithstanding their differences in extensive verbiage, as involving only this one point of alleged novelty in the art, which has advanced by small steps. Those claims of the second group above, which recite also the radial movement, merely build upon the Sherman patents and can derive no benefit from them.

The Solicitor for the Patent Office points to certain language in the Sherman et al. patent, 2,102,651, from which he argues that Sherman taught the desirability of a movement of the pins in the direction taught by appellant as being the essence of the invention. It must be conceded that certain language in said Sherman et al. patent is very confusing in trying to ascertain exactly what kind of movement the patentees taught and professed to disclose or did disclose. We have examined the drawing of this patent carefully and, notwithstanding the ambiguous language involving the terms "laterally" and "circumferentially," we are inclined to agree with appellant that what Sherman sought to do was to provide a cam action for his pins so that they would protrude through the pin wheel, the pin points being smaller than the holes in the paper so as to meet any longitudinal distortion of the paper. After examining this patent carefully we find no structure that is capable of the movement to and fro transversely to the movement of the paper which appellant so clearly discloses and defines by the appealed claims.

Appellant has constructed a device where the pins are so mounted that they have to and fro lateral movement transversely to their path of travel, independently of each other. No such independent movement is shown by any of the prior art references cited. In appellant's device, each pin meets its own problem. In the Neth patent, if one stationary pin comes in contact with a distorted edge of a hole in the paper it is presumed to move the whole unit, together with the sleeve upon which the wheel is stationed, in the proper direction. This expedient obviously has lack of sensitivity and is a wholly different concept of solving the problem from that of appellant. It is our view that appellant has accomplished something characterized by novelty and usefulness in providing the independent action and the to and fro movement (which may properly be referred to as "floating") of each individual pin, thus providing a more sensitive and quicker-responding action in meeting the difficulties encountered.

The group of claims limited to the use of flat feeding pins was rejected by the tribunals below on the same ground as the first group, it being the opinion of the Patent Office that in view of the prior art the provision for flat pins did not add patentability to these claims. We think the attitude of the Patent Office as to these claims was correct with reference to the feature of the flat pin. However, no other ground of rejection being given to these claims except that which was applied to the first group, and since we differ with the Board as to their patentability, it follows that the claims must all stand or fall together and we conclude that the Patent Office, on the prior art cited, was not warranted in rejecting the claims.

For the reasons stated, the decision of the Board of Appeals is reversed.

REVERSED.

PATENT SUITS

NOTICES

Adverse Decisions in Interferences

In interferences involving the indicated claims of the following patents final decisions have been rendered that the respective patentees were not the first inventors with respect to the claims listed:

Pat. 2,350,010, F. C. Beekley, Microphone, decided Dec. 16, 1947, claims 5, 6, 8, 9 and 16.

Pat. 2,412,318, Marvin Camras, Safety drive, braking, and control mechanism for magnetic recording devices, decided Feb. 3, 1948, claims 9, 14 and 15.

Cancellation Notices

Penn Beverage Company, its assigns or legal representatives, take notice:

A petition for cancellation having been filed in this Office by W. A. Haller Corporation, 1429 Walnut St., Philadelphia, Pa., to effect the cancellation of trade-mark registration of Penn Beverage Company, Fitzwater St. east of Broad St., Philadelphia, Pa., No. 261,112, dated September 3, 1929, and the notice of such proceeding sent by registered mail to the said Penn Beverage Company at the said address having been returned by the post office undeliverable, notice is hereby given that unless said Penn Beverage Company, its assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the cancellation will be proceeded with as in the case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

THOMAS F. MURPHY,
Assistant Commissioner of Patents.

January 29, 1948.

True Shape Hosiery Co., its assigns or legal representatives, take notice:

A cancellation proceeding has been instituted by this Office upon the application of Huffman Full Fashioned Mills, Inc., Meeting St., Morganton, N. C., to effect the cancellation of trade-mark registration of True Shape Hosiery Co., No. 154,848, dated May 9, 1922. The assignment records of this Office show a transfer of title to this registration to John Blood & Company, Inc., Philadelphia, Pa., which has been substituted for said registrant to defend the registration concerned. The notice of such proceeding sent by registered mail to John Blood & Company, Inc., at the said address having been returned by the post office undeliverable, notice is hereby given that unless John Blood & Company, Inc., its assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the cancellation will be proceeded with as in the case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

THOMAS F. MURPHY,
Assistant Commissioner of Patents.

February 2, 1948.

Ernest Blood, his assigns or legal representatives, take notice:

A cancellation proceeding has been instituted by this Office upon the application of Huffman Full Fashioned Mills, Inc., Meeting St., Morganton, N. C., to effect the cancellation of trade-mark registration of Ernest Blood, No. 70,340, dated August 25, 1908, renewed by True Shape Hosiery Co., Somerset and Franklin Sts., Philadelphia, Pa. The assignment records of this Office show a transfer of title to this registration to John Blood & Company, Inc., Philadelphia, Pa., which has been substituted for said registrant to defend the registration concerned. The notice of such proceeding sent by registered mail to John Blood & Company, Inc., at the said address having been returned by the post office undeliverable, notice is hereby given that unless John Blood & Company, Inc., its assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the cancellation will be proceeded with as in the case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

THOMAS F. MURPHY,
Assistant Commissioner of Patents.

February 2, 1948.

Belle Knitting Corp., its assigns or legal representatives, take notice:

A cancellation proceeding has been instituted by this Office upon the application of Fabric Specialties Co., Inc., 650 Turner Ave., N. W., Grand Rapids, Mich., to effect the cancellation of trade-mark registration of Belle Knitting Corp., No. 355,157, dated March 8, 1938. The assignment records of this Office show a transfer of title to this registration to The McKay Products Corporation, Baltimore, Md., which has been substituted for said registrant to defend the registration concerned. The Office having been unable to secure service upon The McKay Products Corporation, notice is hereby given that unless its assigns, legal representatives, or other person claiming an interest in the registration shall enter an appearance therein within thirty days from the first publication of this order the cancellation will be proceeded with as in the case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

THOMAS F. MURPHY,
Assistant Commissioner of Patents.

February 4, 1948.

Disclaimers

2,021,707.—*Walter L. Upson*, University City, Mo. FLUID REACTION DEVICE. Patent dated Nov. 19, 1935. Disclaimer filed Feb. 5, 1948, by the assignee, *The Torrington Manufacturing Company;* the inventor consenting.

Hereby disclaims from the scope of each of claims 1 to 20 inclusive, any fluid displacement device other than a fan comprising a plurality of distinct, wide blades mounted for rotation about a common axis, each blade being bounded over a predominant portion of its margin by convexly curvilinear edge portions and formed to provide a wide, open end, substantially pitched channel extending outwardly of the axis of fan rotation and rearwardly with respect to the direction of rotation.

2,072,322.—*Walter L. Upson*, University City, Mo. FLUID REACTION APPARATUS. Patent dated Mar. 2, 1937. Disclaimer filed Feb. 5, 1948, by the assignee, *The Torrington Manufacturing Company;* the inventor consenting.

Hereby disclaims from the scope of each of claims 1 to 4 inclusive, 12, 13, 15 and 17 to 29 inclusive, any fluid reaction device other than a fan comprising a plurality of distinct, wide blades each of a generally symmetrical shape in plan, each blade being bounded over a predominant portion of its margin by convexly curvilinear edge portions and formed to provide a wide, open end, substantially pitched channel extending outwardly of the axis of fan rotation and rearwardly with respect to the direction of rotation, and with the blades so mounted for rotation about a common axis that the channel of each blade is distinctly divergently related to the axis of blade symmetry.

2,403,213.—*Gaetano F. D'Alelio*, Northampton, Mass. SYNTHETIC RESIN BONDED ABRASIVE. Patent dated July 2, 1946. Disclaimer filed Jan. 23, 1948, by the assignee, *Pro-Phy-Lac-Tic Brush Company.*

Hereby enters this disclaimer to claims 5, 7, and 8 of said patent.

2,426,423.—*Theodore A. Woolsey*, Pasadena, Calif. HYDRAULIC COUPLING. Patent dated Aug. 26, 1947. Disclaimer filed Jan. 23, 1948, by the inventor; the assignee, *Marman Products Company, Inc.*, assenting.

Hereby enters this disclaimer to claims 13 and 17 of said patent.

REGISTER OF PATENTS AVAILABLE FOR LICENSING OR SALE

(The "Groups" appearing after the patent abstracts are based on the Standard Industrial Classification Manual, Vol. I, Manufacturing Industries, Executive Office of the President, Bureau of the Budget)

The United Shoe Corporation, of 140 Federal St., Boston 10, Mass., has placed 186 patents on the Register of Patents as available for license, in addition to the 2,092 patents previously registered by this corporation. 138 of the patents cover shoe machinery, the remaining 48 being useful in various other fields which include sewing machines, parts, and attachments; sorting machines; and devices such as finishing tools and brush structures. Abstracts of these 186 patents will be published in groups in the OFFICIAL GAZETTE from March 2 to March 16 inclusive.

SHOE MACHINERY (Group 35—59)

Pat. 1,869,434. EDGE TRIMMER AND THE LIKE. Patented Aug. 2, 1932. A machine for trimming the edges of shoe soles. A pair of power driven, equally and oppositely movable, rotary presser members guide and feed the edge of the shoe sole to a rotating, cup-shaped edge trimming knife. The width to which the sole margin is to be trimmed is determined by adjusting one of the presser members. Reg. No. 9,171.

Pat. 1,872,441. FASTENER INSERTING MACHINE. Patented Aug. 16, 1932. Relates to a machine for inserting lacing hooks. A movable anvil, by which the hooks are transferred from a raceway and inserted in the work, has adjustable devices by which the movement of the anvil to the raceway and its hook inserting movement may be each individually regulated without affecting the other. Means is also provided for supplying pieces of reinforcing material at the points where the hooks are inserted. Reg. No. 9,172.

Pat. 1,881,656. FINISHING MACHINE. Patented Oct. 11, 1932. A finishing machine having means for supporting an edge setting tool for swinging movement about a virtual axis in proximity to its work-engaging face. Reg. No. 9,173.

Pat. 1,882,005. SHOE STIFFENER CONDITIONING MACHINE. Patented Oct. 11, 1932. An apparatus for tempering or conditioning box toe stiffeners. The stiffeners are placed upon a carrier normally held elevated, by a weight, above a receptacle containing a conditioning liquid. The carrier is depressed manually to immerse the stiffeners in the liquid and then released, whereupon the weight gradually returns it to its normal elevated position. Reg. No. 9,174.

Pat. 1,884,674. APPARATUS FOR CONDITIONING PARTS OF SHOES. Patented Oct. 25, 1932. Relates to apparatus for spraying hot, moist vapor upon the heel breast and both surfaces of an unlayed breast flap of a Louis-heeled shoe. The shoe, with the breast flap held away from the heel breast, is supported over a chamber in which are two spray nozzles, one directed at the grain face of the flap and the other directed between the breast flap and the heel breast. Reg. No. 9,175.

Pat. 1,891,263. MACHINE FOR OPERATING ON LASTS. Patented Dec. 20, 1932. A machine for assembling in a shoe the two parts of the last disclosed in Patent 1,856,127. The heel part of the last is supported upon a jack pin, and treadle operated devices effect first a relative tilting movement and then a relative sliding movement between the forepart and the heel part, to assemble the last. Reg. No. 9,176.

Pat. 1,891,274. METHOD OF AND SYSTEM FOR TEMPERING MATERIAL. Patented Dec. 20, 1932. The tempering of shoe parts is controlled automatically by the action of a test piece of the same material mounted in the tempering chamber and connected to a valve for releasing the tempering fluid from the chamber when the test piece has become sufficiently flexible. Reg. No. 9,177.

Pat. 1,897,046. FASTENER SUPPLYING MECHANISM. Patented Feb. 14, 1933. Relates to mechanism for intermittently rotating a bladed disk for discharging lacing hooks from a hopper into a raceway. The disk is yieldingly driven by a double acting ratchet and pawl couple but is positively arrested whenever one of the blades is brought into register with the raceway. Reg. No. 9,178.

Pat. 1,897,526. AUTOMATIC EDGE TRIMMER. Patented Feb. 14, 1933. A shoe is supported in a jack and automatically moved to transfer the point of operation along the edge of the shoe sole under the control of a template secured to the sole. Reg. No. 9,179.

Pat. 1,904,313. FASTENING INSERTING MACHINE. Patented Apr. 18, 1933. A machine for nailing on rubber heels arranged to permit use of the nail driver for positioning the work. Reg. No. 9,180.

Pat. 1,904,314. FASTENING INSERTING MACHINE. Patented Apr. 18, 1933. A machine for inserting staples through a shank piece, having means for locating work to aline openings in the shank piece with the staple driver. Reg. No. 9,181.

Pat. 1,908,356. MACHINE FOR OPERATING ON LASTS. Patented May 9, 1933. A machine for disassembling the two parts of the last disclosed in Patent 1,856,127. A fixed abutment engages the forepart of the last while a movable jack pin, which is clutched to the heel part, first tilts the heel part and then exerts a positive downward pull thereon, to separate it from the forepart. Reg. No. 9,182.

Pat. 1,908,914. INSEAM TRIMMING MACHINE. Patented May 16, 1933. The edge of a cup-shaped inseam trimming cutter is scalloped to provide a series of openings through which a vibrating welt beating tool operates so that the welt is beaten out and the inseam is pounded out at the same time that it is trimmed. Reg. No. 9,183.

Pat. 1,913,437. SHOE SUPPORT. Patented June 13, 1933. A support for the toe end of a shoe, comprising a rubber fluid container within a holder and a flexible non-elastic cover. Reg. No. 9,184.

Pat. 1,919,740. EDGE SETTING MACHINE. Patented July 25, 1933. An automatic machine for setting the edge of the sole of a shoe supported on a jack which is movable to transfer the point of operation of the tool along the edge of the sole, and having two setting tools with means for automatically changing from one tool to the other. Reg. No. 9,185.

Pat. 1,920,501. TRIMMING MACHINE. Patented Aug. 1, 1933. A machine for trimming the insole rib and surplus upper materials of a staple lasted shoe. A treadle operated, vertically movable gage against which the shoe bottom is held, permits a horizontally moving trimming knife to cut above or below the line of staples, as desired, during the progress of the trimming operation. Reg. No. 9,186.

Pat. 1,921,058. MANUFACTURE OF BOOTS AND SHOES. Patented Aug. 8, 1933. A machine for accurately applying location marks, such as jig holes, to tips and vamps. Reg. No. 9,187.

Pat. 1,921,165. EDGE TRIMMING MACHINE. Patented Aug. 8, 1933. A shoe is supported in a jack and automatically moved to transfer the point of operation along the edge of the shoe sole under the control of a template secured to the sole and an adjustable guide bearing against the template, a gage being provided for positioning the guide relatively to the point of operation upon the shoe. Reg. No. 9,188.

Pat. 1,922,137. SOLE MOLDING MACHINE. Patented Aug. 15, 1933. A machine for molding the toe ends of the soles of turn shoes, after they have been mounted on lasts, including a mold which is self-adjustable to accommodate different shapes and sizes. Reg. No. 9,189.

Pat. 1,923,167. SHOE TREATING APPARATUS. Patented Aug. 22, 1933. A shoe transporting conveyor moves along the open mouth of a chamber in which fluid for tempering the toe portions of shoes on the conveyor is circulated. At the delivery end of the conveyor mechanism actuated by the foremost shoe causes the conveyor to stop if the shoe is not removed. Reg. No. 9,190.

Pat. 1,925,210. APPARATUS FOR TREATING SHOE PARTS OR THE LIKE. Patented Sept. 5, 1933. An apparatus for tempering shoe upper parts. The work pieces are placed in wire baskets upon inclined shelves in a chamber in which heated water vapor is circulated, movable dampers adjacent to the shelves controlling the circulation and distribution of the vapor. Reg. No. 9,191.

Pat. 1,935,863. SHOE FINISHING MACHINE. Patented Nov. 21, 1933. A finishing machine adapted to be associated with a constantly rotating shaft and having a tool holder, means for oscillating the tool holder from the shaft, and a clutch for connecting the oscillating means to the tool holder. Reg. No. 9,192.

Pat. 1,937,819. FINISHING MACHINE. Patented Dec. 5, 1933. A finishing machine including a tool holder adapted to be substituted for a Naumkeag pad and having an oscillating tool carrier arranged to allow any one of a plurality of tools to be brought into operative position. Reg. No. 9,193.

Pat. 1,943,308. HEEL FINISHING MACHINE. Patented Jan. 16, 1934. An automatic machine for finishing the heels of shoes, having a turret with a plurality of shoe supporting jacks and a plurality of working stations with different types of finishing tools. Reg. No. 9,194.

Pat. 1,943,429. FASTENING INSERTING MACHINE. Patented Jan. 16, 1934. A heel seat pegging machine having an awl for forming holes for fastenings and movable to feed the work, provided with means for partially withdrawing the awl before the feed movement. Reg. No. 9,195.

Pat. 1,947,589. FASTENING INSERTING MACHINE. Patented Feb. 20, 1934. A hand tacker provided with means arranged to permit driving tacks with their heads either flush or upstanding. Reg. No. 9,196.

Pat. 1,950,554. FASTENING INSERTING MACHINE. Patented Mar. 13, 1934. A fastener inserting machine having an awl and operating means for the awl including a latch arranged to be released when the awl meets excessive resistance. Reg. No. 9,197.

Pat. 1,963,169. MACHINE FOR, AND METHOD OF, INSERTING FASTENINGS. Patented June 19, 1934. A paper peg inserting machine having a knife for slitting the end of a peg before it is driven. Reg. No. 9,198.

Pat. 1,966,727. CHANNEL CLOSING AND EDGE COMPACTING MACHINE. Patented July 17, 1934. A machine for closing channels in, and compacting the edges of, shoe soles, having means for engaging a sole to hold it from spreading under the action of the compacting means. Reg. No. 9,199.

Pat. 1,973,065. TRIMMING MACHINE. Patented Sept. 11, 1934. A machine for cutting off the projecting ends of a rand flush with the breast face of a heel base. A yieldable table supports the heel base with its breast face against a power operated cutter which severs the end of the rand but is capable of yielding if it encounters a misplaced heel base, to prevent severing the base. Reg. No. 9,200.

Pat. 1,974,487. TRIMMING MACHINE. Patented Sept. 25, 1934. An inseam trimming machine provided with an auxiliary cutter which automatically snips the long strip of severed waste material into short sections, to facilitate its discharge into a waste-pipe. Reg. No. 9,201.

Pat. 1,975,460. LASTING APPARATUS. Patented Oct. 2, 1934. A device for clamping the upper of a stitchdown shoe to a last, having a stem for entering the last pin hole and means for engaging the forepart of the upper to press it against the last. Reg. No. 9,202.

Pat. 1,979,409. FASTENING INSERTING MACHINE. Patented Nov. 6, 1934. Staple forming and driving mechanism having a deflector and a staple transferring device provided with guide portions extending substantially to the deflector. Reg. No. 9,203.

Pat. 1,981,037. FASTENING INSERTING MACHINE. Patented Nov. 20, 1934. A fastener inserting machine having a driver and an anvil with cavities for making staples with helically clenched legs. Reg. No. 9,204.

Pat. 1,981,062. SHOE MACHINE. Patented Nov. 20, 1934. An adjustable column for a shoe machine having a treadle connection which automatically changes its length as the column is shortened or lengthened. Reg. No. 9,205.

Pat. 1,981,944. TRIMMING MACHINE. Patented Nov. 27, 1934. An inseam trimming machine employing a band knife which runs on small rolls arranged to form a bend of short radius in the operating portion of the knife, causing the latter to curve away from and clear the upstanding materials at the opposite side of the shoe. Especially useful with narrow shank shoes. Reg. No. 9,206.

Pat. 1,982,740. EDGE BURNISHING MACHINE. Patented Dec. 4, 1934. An edge setting machine having a tool carrier and a tool holder mounted in the carrier so that different surfaces of a tool may be selectively presented to operative position. Reg. No. 9,207.

Pat. 1,983,635. FINISHING MACHINE. Patented Dec. 11, 1934. Mechanism for supplying pellets of wax to the edge setting tool of an automatic edge setting machine, also covers a tool having a recess to receive pellets of wax. Reg. No. 9,208.

Pat. 1,986,923. FASTENING INSERTING MACHINE. Patented Jan. 8, 1935. A fiber peg inserting machine having an awl and fluid pressure means for operating the awl arranged to permit escape of fluid pressure when the awl meets a predetermined resistance. Reg. No. 9,209.

Pat. 1,986,932. FASTENING INSERTING MACHINE. Patented Jan. 8, 1935. A fiber peg inserting machine arranged to drive fastenings that are headed flush with the surface of the work. Reg. No. 9,210.

Pat. 1,993,953. FINISHING MACHINE. Patented Mar. 12, 1935. A finishing machine having a rotary tool and means for heating the tool that is movable to and from heat exchanging position relative to the tool. Reg. No. 9,211.

Pat. 1,996,853. FASTENING INSERTING MACHINE. Patented Apr. 9, 1935. A staple forming and driving machine having means for obliquely cutting ends of staple legs and, thereafter, deflecting them in substantially parallel planes at right angles to the staple crossbar. Reg. No. 9,212.

Pat. 2,000,961. FINISHING MACHINE. Patented May 14, 1935. An edge setting machine having an oscillating tool and provided with means for varying the amplitude of oscillation of the tool. Reg. No. 9,213.

Pat. 2,005,104. MACHINE FOR OPERATING UPON SHOES. Patented June 18, 1935. An automatic machine having a shoe supporting jack movable to transfer the point of operation about the shoe, the movement of the jack being guided by feeler mechanism engaging a marginal contour surface fixed with relation to the shoe to control tipping and turning movements of the shoe. Reg. No. 9,214.

Pat. 2,006,452. MACHINE FOR INSERTING FASTENINGS. Patented July 2, 1935. A paper peg inserting machine having means for imparting a hammer blow to the work, immediately prior to the insertion of a peg. Reg. No. 9,215.

Pat. 2,011,683. FASTENING INSERTING MACHINE. Patented Aug. 20, 1935. A staple driving machine having means for interrupting the feed of the wire if a staple is not fully expelled. Reg. No. 9,216.

Pat. 2,013,046. HEEL FINISHING MACHINE. Patented Sept. 3, 1935. An automatic heel finishing machine having an indenting tool which is pivotally supported, and novel means for jacking the shoe to facilitate the indenting operation. Reg. No. 9,217.

Pat. 2,019,573. FASTENING INSERTING MACHINE. Patented Nov. 5, 1935. A paper peg inserting machine having a driver bar and a driver connected to the bar with lost motion to permit continued movement of the driver after the bar has stopped. Reg. No. 9,218.

Pat. 2,023,549. CREASING AND BURNISHING MACHINE. Patented Dec. 10, 1935. A machine for creasing and edge burnishing straps, or the like, having a feed roll, a creasing wheel and an oscillating burnishing tool. Reg. No. 9,219.

Pat. 2,028,840. FASTENING INSERTING MACHINE. Patented Jan. 28, 1936. A staple forming and driving machine having means for deflecting the point of one leg of a staple after it has been formed and before it is driven. Reg. No. 9,220.

Pat. 2,029,533. METHOD OF, AND APPARATUS FOR, OPERATING ON THE SOLE EDGES OF RUBBER SOLED SHOES. Patented Feb. 4, 1936. A method of, and machine for, closing the edges of the soles of rubber shoes, having a rotary tool provided with a spiral rib and arranged to beat the edge of the sole. Reg. No. 9,221.

Pat. 2,034,752. FASTENING INSERTING MACHINE. Patented Mar. 24, 1936. A paper peg inserting machine having operating mechanism including a toggle arranged to be broken to withdraw the peg inserting tool after a hole has been formed. Reg. No. 9,222.

Pat. 2,035,080. FASTENING INSERTING MACHINE. Patented Mar. 24, 1936. A paper peg inserting machine having an operating mechanism including a member yieldingly connected to the peg inserting tool to permit withdrawal of the tool after a hole has been formed. Reg. No. 9,223.

Pat. 2,036,352. FASTENER SUPPLYING APPARATUS. Patented Apr. 7, 1936. A flexible raceway for eyelets or rivets. The raceway is made from a strip of sheet metal bent to form a clencher cross-section and made flexible by cutting transverse kerfs through the inturned margins and the U-shaped portions of the bends. Reg. No. 9,224.

Pat. 2,042,378. SHOE BOTTOM ATTACHING APPARATUS. Patented May 26, 1936. A press for use in cement attaching soles to shoes. A pad box contains an annular, inflatable pad for applying pressure to a shoe sole and supports an overhead yoke by which a sole extension support is sustained. Reg. No. 9,225.

Pat. 2,043,369. SHOE ROUGHING MACHINE. Patented June 9, 1936. A rotary roughing tool is positioned partly within a bowl-shaped work rest which is freely rotatable about an axis at right angles to that of the tool, and is adjustable in an arc concentric with the axis of the tool. Reg. No. 9,226.

Pat. 2,044,054. TRIMMING MACHINE. Patented June 16, 1936. A toe trimming machine designed to utilize a short portion of a long, flexible strip-knife the major portion of which is kept in two coils from one of which the knife is unwound little by little as sharp portions are needed and on the other of which the dulled portions are wound. Reg. No. 9,227.

Pat. 2,046,443. HEEL BUILDING MACHINE. Patented July 7, 1936. The bottom of a mold in which heels are built consists of a nail block which moves upward to eject a completed heel from the mold and present the block in a convenient position to receive the nails for the next heel. A power operated presser pad which is movable into and out of register with the mold is controlled by a safety device which prevents power operation of the pad when it is not in register with the mold. Reg. No. 9,228.

Pat. 2,052,659. FASTENING INSERTING MACHINE. Patented Sept. 1, 1936. A staple driving and forming mechanism having a rotatable die for severing wire and transferring it into driving position. Reg. No. 9,229.

Pat. 2,053,469. MACHINE FOR LACING SHOE UPPERS. Patented Sept. 8, 1936. A lacing machine in which a plurality of spring actuated loopers act successively to complete the formation of a loop on one spindle before one is started on the next spindle, and so on. Thus there is only one reeving bend in the thread at a time, the thread passing freely through the other spindles and less strain being imposed on the thread than when all the loops are formed simultaneously. Reg. No. 9,230.

Pat. 2,054,170. HEEL-SETTING MEANS. Patented Sept. 15, 1936. A machine for setting a removable clamp upon an assembled heel and shoe. Preliminary pressure is applied by a treadle and final pressure by a power operated cam. The clamp equalizes pressure on the top lift and back of the heel and a flap-engaging member applies pressure to the breast flap. Reg. No. 9,231.

Pat. 2,056,316. CONTROLLING MECHANISM. Patented Oct. 6, 1936. Relates to a mechanism for automatically so modifying the action of the presser foot of a high-speed automatic eyeleting machine that the presser foot will be retracted when the machine stops. Reg. No. 9,232.

Pat. 2,064,027. FASTENING INSERTING MACHINE. Patented Dec. 15, 1936. A paper peg inserting machine having a driver operating mechanism including a toggle adapted to move into broken position when the driver meets excessive resistance. Reg. No. 9,233.

Pat. 2,066,464. SHOE UPPER LACING MACHINE. Patented Jan. 5, 1937. A lacing machine so organized that the cross lacings are formed on the inside of the shoe upper and thus do not injure the surface of external uncured rubber facings thereon from which the longitudinal stretches of the lacings are spaced by the flanges of the eyelets through which the lacing thread passes. Reg. No. 9,234.

Pat. 2,067,295. APPARATUS FOR ATTACHING HEELS TO SHOES. Patented Jan. 12, 1937. A pressure abutment is locked automatically after a predetermined force has been applied to the work through a treadle. A yieldable tube surrounds the nail driver to initially retain the nail in place. Reg. No. 9,235.

Pat. 2,075,938. MACHINE FOR OPERATING UPON HEEL-LIFTS AND RANDS. Patented Apr. 6, 1937. A heel-lift and rand assembling machine in which the lift and rand are advanced in a curved path by a pair of rolls acting in co-operation with a retarding device to hold the assembly against an edge gage during the advancing movement. Reg. No. 9,236.

Pat. 2,077,524. APPARATUS FOR MAKING SHOES. Patented Apr. 20, 1937. A machine for pressing sock linings into shoes. A pivoted frame arranged above a shoe support carries a plurality of crepe rubber covered forms any one of which may be positioned within a shoe upon the support and be forced by a manually operated plunger against the sock lining to locate the lining in the shoe and smooth it out. Reg. No. 9,237.

Pat. 2,078,318. WORK SUPPORTING MECHANISM. Patented Apr. 27, 1937. A work supporting and positioning device for a sole tacking machine. A continuously rotating rubber roll having a shallow groove to receive the heel end of a lasted shoe presents the shoe to the nozzle of the tacker and holds it there in a predetermined position during the tacking operation. Reg. No. 9,238.

Pat. 2,078,320. CUTTING MACHINE. Patented Apr. 27, 1937. A sole rounding and channeling machine having mechanism which grips a sole and advances it positively for successive cutting operations. The positive advance of the sole is effected by one of the knives, acting as a feeding means. Reg. No. 9,239.

Pat. 2,084,553. METHOD OF AND APPARATUS FOR TREATING SHOE PARTS. Patented June 22, 1937. In tempering certain areas of a sole without permitting water to contact other areas a localized bend of short radius is formed in the ball portion of the sole, thereby depressing the shank portion only into the water. Reg. No. 9,240.

Pat. 2,085,149. TRIMMING MACHINE. Patented June 29, 1937. A machine for trimming surplus material from overlasted uppers of McKay or Littleway shoes. A vibratory finger bends the free margin of the upper material away from the insole into the path of a reciprocating trimming knife. Reg. No. 9,241.

Pat. 2,090,677. GRADING MACHINE. Patented Aug. 24, 1937. Relates to a machine for evening and marking shoe soles. Provision is made for controlling the operation of the machine so that all soles will be merely marked, or so that soles above a certain thickness or below a certain thickness will be merely marked while others will be both evened and marked. Reg. No. 9,242.

Pat. 2,092,816. EMBOSSING MACHINE. Patented Sept. 14, 1937. A press with automatic timing mechanism to cause a dwell for a predetermined period during which embossing dies are in contact with the work. Intended for embossing and dieing out ankle patches for tennis shoes. Reg. No. 9,243.

Pat. 2,094,007. FLEXING MACHINE. Patented Sept. 28, 1937. A machine for reducing the stiffness of a leather sole by bending it to loosen its fibers. Pairs of gripping jaws carried by a turret seize the heel ends of soles and carry the soles between pairs of flexing members which bend them alternately in opposite directions. Reg. No. 9,244.

Pat. 2,097,568. PERFORATING MACHINE. Patented Nov. 2, 1937. Relates to a perforating machine having mechanism by which the machine may be readily converted from a flat topped table machine into a post or arm machine and also having mechanism for spot punching, as well as a suction device for removing pieces of material cut out by the punches. Reg. No. 9,245.

Pat. 2,100,441. DRIER. Patented Nov. 30, 1937. Relates to apparatus for drying freshly cemented soles and stacking the dried soles. At each movement of an intermittently operated conveyor having an upward run and a downward run a freshly cemented sole is fed to the conveyor at the bottom of the upward run and a dry sole, deposited on a support at the bottom of the downward run, is fed out of the path of the conveyor and added to the bottom of a stack of dry soles. Reg. No. 9,246.

Pat. 2,102,731. LIP LAYING DEVICE. Patented Dec. 21, 1937. Relates to a rotary tool for laying sole channel lips. Strips of rubber are inserted in inclined slots in the smooth annular rim of an open ended hollow drum mounted on a driven shaft. Reg. No. 9,247.

TRADE-MARKS

OFFICIAL GAZETTE, MARCH 2, 1948

[VOL. 608. No. 1]

ACT OF 1905

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication. As provided by section 14 of said act, a fee of ten dollars must accompany each notice of opposition.

Marks published for opposition under the act of 1946 follow the 1905 publications.

CLASS 1

RAW OR PARTLY PREPARED MATERIALS

Ser. No. 507,849. THE RESINOUS PRODUCTS & CHEMICAL COMPANY, Philadelphia, Pa. Filed Aug. 22, 1946.

AMBERLITE

FOR SYNTHETIC RESINOUS MATERIALS IN THE FORM OF GRANULES, POWDERS, AND SOLUTIONS FOR USE IN ADHESIVES.
Claims use since Nov. 2, 1940.

Ser. No. 511,581. SUSQUEHANNA CHEMICAL CORPORATION, Bradford, Pa. Filed Oct. 26, 1946.

SUSQUEHANNA CHEMICALS

The word "Chemicals" is disclaimed.
FOR CHARCOAL.
Claims use since Sept. 16, 1946.

Ser. No. 522,856. EAGLE-OTTAWA LEATHER COMPANY, Grand Haven, Mich. Filed May 22, 1947.

EAGLE ELK

Applicant disclaims exclusive use of the word "Elk" apart from the mark.
FOR LEATHER.
Claims use since 1870.

Ser. No. 522,860. EAGLE-OTTAWA LEATHER COMPANY, Grand Haven, Mich. Filed May 22, 1947.

BOULEVARD GRAIN

Applicant disclaims exclusive use apart from the mark of the word "Grain."
FOR LEATHER.
Claims use since January 1937.

Ser. No. 522,861. EAGLE-OTTAWA LEATHER COMPANY, Grand Haven, Mich. Filed May 22, 1947.

LOAFER

FOR LEATHER.
Claims use since January 1946.

Ser. No. 523,601. MITCHELHILL SEED COMPANY, St. Joseph, Mo. Filed June 5, 1947.

NEW ERA

FOR FIELD SEED AND GRASS SEED.
Claims use since Mar. 1, 1920.

Ser. No. 525,174. THE AMERICAN OAK LEATHER CO., Cincinnati, Ohio. Filed June 30, 1947. Under 10-year proviso.

AMERICAN OAK LEATHER

FOR LEATHER.
Claims use since 1881.

CLASS 2

RECEPTACLES

Ser. No. 517,838. EDMILTON CORPORATION, Ridgefield, Conn. Filed Feb. 20, 1947.

Florette

FOR PERFUME DISPENSERS COMPRISING AN EMPTY CONTAINER UTILIZING A CAPILLARY WICK.
Claims use since July 10, 1946.

Ser. No. 522,379. CELLO-MASTERS, INCORPORATED, New York, N. Y. Filed May 14, 1947.

FOR CELLOPHANE AND CELLULOSE ACETATE BAGS.
Claims use since Apr. 16, 1947.

CLASS 3

BAGGAGE, ANIMAL EQUIPMENTS, PORTFOLIOS, AND POCKETBOOKS

Ser. No. 503,727. HAGERSTOWN LEATHER COMPANY, Hagerstown, Md. Filed June 12, 1946.

FOR BILLFOLDS.
Claims use since May 17, 1946.

CLASS 4

ABRASIVE, DETERGENT, AND POLISHING MATERIALS

Ser. No. 509,519. LANMAN & KEMP-BARCLAY & CO., INCORPORATED, New York, N. Y. Filed Sept. 21, 1946. Under 10-year proviso as to "Reuter."

The picture of a woman is fanciful. No claim is made to the words "Jabon de" and "de Lujo."
FOR SOAP.
Claims use on the precise form shown in the drawing since July 5, 1946 on the same mark with English wording having been continuously used and applied to said goods in applicant's business and in the business of applicant's predecessors since Sept. 23, 1924, and the word mark Reuter having been continuously used and applied to said goods in applicant's business and in the business of its predecessor since June 1, 1880.

Ser. No. 513,331. HELLMUTH NUSSBAUM, Belleville, N. J. Filed Nov. 27, 1946.

ANI-GLO

FOR CLEANER FOR RUGS AND OTHER TEXTILES, WHICH ALSO RESTORES THE LUSTER AND COLOR.
Claims use since Oct. 28, 1946.

CLASS 6

CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS

Ser. No. 503,446. RICHARD HUDNUT, New York, N. Y. Filed June 7, 1946.

trois fleurs

FOR TALCUM POWDER, DUSTING POWDER, FACE POWDER, FOUNDATION CREAM, CLEANSING CREAM, AND BRILLIANTINE.
Claims use since Mar. 15, 1946, on talcum powder, dusting powder, and face powder, and since Feb. 26, 1946, on foundation cream, cleansing cream, and brilliantine.

Ser. No. 508,812. ONYX OIL & CHEMICAL COMPANY, Jersey City, N. J. Filed Sept. 10, 1946.

OROSET

FOR FOAMING AGENT, USED FOR PRODUCING RAPID AND COMPLETE PENETRATION OF SOLID MATERIALS BY LIQUIDS AND FOR LOWERING THE SURFACE TENSION OF LIQUIDS SO AS TO PRODUCE THE EXTENSIVE FORMATION OF BUBBLES UPON LIQUID SURFACES UPON THE AGITATION OF THE SUB-SURFACE PORTION OF THE SAME.
Claims use since on or about Aug. 7, 1946.

Ser. No. 515,767. KNAPP-MONARCH COMPANY, St. Louis, Mo. Filed Jan. 15, 1947.

SPRAYLETS

FOR SYPHON BULBS OR CAPSULES CONTAINING COMPRESSED OR LIQUEFIED GAS FOR CARBONATING AND/OR AERATING, WATER, CREAM, OR SIMILAR SUBSTANCES.
Claims use since Dec. 27, 1946.

Ser. No. 515,768. KNAPP-MONARCH COMPANY, St. Louis, Mo. Filed Jan. 15, 1947.

CHARGETS

FOR SYPHON BULBS OR CAPSULES CONTAINING COMPRESSED OR LIQUEFIED GAS FOR CARBONATING AND/OR AERATING WATER, CREAM, OR SIMILAR SUBSTANCES.
Claims use since Dec. 27, 1946.

Ser. No. 510,636. ADCO, INC., Sedalia, Mo. Filed July 5, 1947. Under section 2f of the act of 1946.

PerfumaKones

FOR PRODUCT FOR DEODORIZING AND PERFUMING INTERIOR SPACES.
Claims use since 1923.

Ser. No. 511,079. GENERAL DYESTUFF CORPORATION, New York, N. Y. Filed July 10, 1947.

EMULPHOGENE

Applicant claims ownership of registration No. 259,507.
FOR EMULSIFYING AGENTS FOR FATTY OILS, MINERAL OILS AND COMBINATIONS THEREOF, AND FOR THE TEXTILE INDUSTRY; FOR SOFTENING AND PLASTICIZING AGENTS FOR OILS; AND FOR STABILIZERS TO BE ADDED TO EMULSIONS OF RUBBER AND SIMILAR MATERIALS.
Claims use since Aug. 30, 1946.

Ser. No. 513,675. MONSANTO CHEMICAL COMPANY, St. Louis, Mo. Filed July 12, 1947.

SIREZ

FOR SYNTHETIC RESINS FOR GENERAL USE IN THE TREATMENT OF TEXTILES INCLUDING THE DRESSING AND FINISHING OF YARNS, FIBERS AND FABRICS, THE BINDING OF PIGMENTS IN TEXTILE PRINTING, AND THE THICKENING OF TEXTILE PRINTING PASTES.
Claims use since Oct. 24, 1946.

Ser. No. 514,528. THE DIVERSEY CORPORATION, Chicago, Ill. Filed July 19, 1947.

DIVOBAN

FOR INSECTICIDE.
Claims use since Nov. 26, 1946.

Ser. No. 514,617. MONSANTO CHEMICAL COMPANY, St. Louis, Mo. Filed July 12, 1947.

REZGARD

FOR FIRE-REPELLENT COMPOSITION CONTAINING PHOSPHATES FOR TEXTILES AND OTHER FIBROUS PRODUCTS.
Claims use since Oct. 29, 1946.

Ser. No. 519,483. MONSANTO CHEMICAL COMPANY, St. Louis, Mo. Filed July 28, 1947.

BIOQUIN

FOR CHEMICAL PRODUCTS FOR USE AS AGRICULTURAL INSECTICIDES, FUNGICIDES, AND HERBICIDES.
Claims use since Feb. 7, 1947.

Ser. No. 523,685. LANOLIN CORPORATION OF AMERICA Los Angeles, Calif. Filed Oct. 13, 1947.

LANOGENE

FOR FACIAL OIL FOR SOFTENING THE SKIN.
Claims use since May 22, 1947.

Ser. No. 524,564. J. W. QUINN DRUG COMPANY, Greenwood, Miss. Filed Sept. 8, 1947.

IN-SEC-TOL

Applicant claims ownership of registration No. 148,192.
FOR INSECTICIDES.
Claims use since April 1919.

Ser. No. 524,817. ANATOLE ROBBINS, INC., Los Angeles, Calif. Filed Sept. 12, 1947.

forty thieves

FOR PERFUME.
Claims use since Dec. 16, 1940.

Ser. No. 525,506. THE SELIG COMPANY, Atlanta, Ga. Filed Sept. 3, 1947.

SELCOL

FOR DISINFECTANT GERMICIDE FOR SANITATION OF DISHES, GLASSWARE, COOKING UTENSILS, SILVERWARE, BOTTLES, GARBAGE PAILS, ETC.
Claims use since Jan. 29, 1947.

Ser. No. 526,912. CHAS. PFIZER & CO., INC., New York, N. Y. Filed July 5, 1947.

PECTICILLIN

FOR PENICILLIN PREPARATION.
Claims use since June 17, 1947.

Ser. No. 526,929. MALLINCKRODT CHEMICAL WORKS, St. Louis, Mo. Filed July 5, 1947.

ALBUSOL

Applicant claims ownership of registration No. 239,593.
FOR SOLUTION OF EGG ALBUMIN EMPLOYED IN THE PROCESSES OF PHOTO-ENGRAVING AND PHOTO LITHOGRAPHY.
Claims use since Aug. 1, 1927.

Ser. No. 527,791. THE CHAMPION PAPER AND FIBRE COMPANY, Hamilton, Ohio. Filed July 5, 1947.

CHESPIN

FOR MIXTURE OF CHESTNUT WOOD AND PINE BARK TANNINS.
Claims use since Sept. 7, 1943.

Ser. No. 528,497. LES PARFUMS NORANTE, SOCIÉTÉ A RESPONSABILITÉ LIMITÉE, Melun, France. Filed July 12, 1947.

MURMEL

FOR PERFUMES, TOILET WATERS, ROUGE, LIPSTICK, AND FACE CREAMS.
Claims use since Jan. 22, 1935.

Ser. No. 528,553. EUGENE BURT COMPANY, Kansas City, Kans. Filed July 14, 1947.

HAIREVER

FOR SCALP AND HAIR TONIC.
Claims use since July 2, 1947.

Ser. No. 529,546. BAYBANK PHARMACEUTICALS, INC., New York, N. Y. Filed July 26, 1947.

NARAKON

FOR NASAL SOLUTION.
Claims use since Feb. 7, 1947.

Ser. No. 529,890. GEIGY COMPANY, INC., New York, N. Y. Filed July 29, 1947.

GY-TET

FOR INSECTICIDES.
Claims use since May 19, 1947.

Ser. No. 530,264. THE VALENTINE COMPANY, Seattle, Wash. Filed Aug. 1, 1947.

VALCO

FOR CHEMICALS FOR TREATING BOILER FEED WATER FOR PREVENTION OF SCALE, RUST AND CORROSION, CHEMICALS FOR TREATING REFRIGERATION BRINES TO CONTROL FREEZING TEMPERATURE, TO INHIBIT CORROSION, AND FOR COLORING THE BRINE, AND CHEMICALS FOR REMOVING SOOT FROM THE FIRE-BOX AND TUBES OF BOILERS AND FURNACES.
Claims use since Nov. 1, 1924.

Ser. No. 530,716. JOE C. BODE, JR., doing business as Manson Distributors, Aurora, Ill. Filed Aug. 7, 1947.

BEAUTISTIK

FOR PREPARATION IN STICK FORM USED IN THE TREATMENT OF MINOR SKIN AILMENTS.
Claims use since July 1, 1947.

Ser. No. 530,738. ELI LILLY AND COMPANY, Indianapolis, Ind. Filed Aug. 7, 1947.

BELILY S

FOR MEDICINAL PREPARATION OF THIAMIN CHLORIDE USED IN VITAMIN B DEFICIENCIES.
Claims use since Aug. 1, 1946.

Ser. No. 531,153. J. B. ROERIG AND COMPANY, Chicago, Ill. Filed Aug. 12, 1947.

The word "Pure" is disclaimed.
FOR TOOL STEEL.
Claims use since Dec. 14, 1927.

Reg. No. 258,575. Registered July 9, 1929. THE AMERICAN FORK AND HOE COMPANY, Cleveland, Ohio, a corporation of Ohio. Republished by registrant.

TRUE TEMPER

FOR RAIL ANCHORS AND RAIL JOINT SHIMS.
Claims use since July 1924.

Reg. No. 259,359. Registered July 30, 1929. MAGNOLIA METAL COMPANY, New York, N. Y., a corporation of West Virginia. Republished by registrant, present location Elizabeth, N. J.

MAGNOLIA

FOR PHOSPHOR BRONZE.
Claims use since Nov. 24, 1928.

Reg. No. 269,545. Registered Apr. 8, 1930. ROBBINS & MYERS, INC., Springfield, Ohio, a corporation of Ohio. Republished by registrant.

AREMITE

FOR METAL CASTINGS, PARTICULARLY CAST IRON CASTINGS.
Claims use since Nov. 13, 1929.

Reg. No. 273,185. Registered July 22, 1930. MAGNOLIA METAL COMPANY, New York, N. Y., a corporation of West Virginia. Republished by registrant, present location Elizabeth, N. J.

MALGAM

FOR BABBITT METALS, ANTIFRICTION METALS, AND METALLIC ALLOYS.
Claims use since Jan. 1, 1928.

CLASS 15

OILS AND GREASES

Reg. No. 243,822. Registered July 3, 1928. THE PURE OIL COMPANY, Chicago, Ill., a corporation of Ohio. Republished by registrant.

PUROL

FOR LUBRICATING OILS.
Claims use since Mar. 22, 1919.

Reg. No. 252,484. Registered Feb. 12, 1929. THE PURE OIL COMPANY, Chicago, Ill., a corporation of Ohio. Republished by registrant.

ROLLEX

FOR LUBRICATING GREASES.
Claims use since Sept. 10, 1924.

Reg. No. 252,544. Registered Feb. 12, 1929. THE PURE OIL COMPANY, Chicago, Ill., a corporation of Ohio. Republished by registrant.

RED CLIPPER

The word "Red" is disclaimed.
FOR LUBRICATING OILS.
Claims use since Sept. 10, 1924.

Reg. No. 252,545. Registered Feb. 12, 1929. THE PURE OIL COMPANY, Chicago, Ill., a corporation of Ohio. Republished by registrant.

PURON

FOR LUBRICATING OILS.
Claims use since Sept. 10, 1924.

Reg. No. 252,546. Registered Feb. 12, 1929. THE PURE OIL COMPANY, Chicago, Ill., a corporation of Ohio. Republished by registrant.

PUROLA

FOR LUBRICATING OILS.
Claims use since Sept. 10, 1924.

Reg. No. 252,550. Registered Feb. 12, 1929. THE PURE OIL COMPANY, Chicago, Ill., a corporation of Ohio. Republished by registrant.

DARK CLIPPER

The word "Dark" is disclaimed.
FOR LUBRICATING OILS.
Claims use since Sept. 10, 1924.

Reg. No. 252,565. Registered Feb. 12, 1929. THE PURE OIL COMPANY, Chicago, Ill., a corporation of Ohio. Republished by registrant.

ALLVIS

FOR LUBRICATING OILS.
Claims use since Sept. 10, 1924.

Reg. No. 269,882. Registered Apr. 22, 1930. JENKIN-GUERIN OIL COMPANY, St. Louis, Mo. Republished by Jenkin-Guerin Inc., St. Louis, Mo., a corporation of Missouri.

ANCHOR BRAND

The word "Brand" is disclaimed.
FOR LUBRICATING OILS, GREASES, AND COMPOUNDS.
Claims use since July 1, 1919.

Reg. No. 270,318. Registered May 6, 1930. THE PURE OIL COMPANY, Chicago, Ill., a corporation of Ohio. Republished by registrant.

PUROCO

FOR LUBRICATING OILS.
Claims use since Oct. 16, 1928.

CLASS 16

PAINTS AND PAINTERS' MATERIALS

Reg. No. 252,967. Registered Feb. 19, 1929. AMERICAN DISINFECTING COMPANY, Sedalia, Mo. Republished by Adco, Inc., Sedalia, Mo., a corporation of Missouri.

Perma Shyne

FOR LIQUID WAX PREPARATION FOR USE IN POLISHING FLOORS, FURNITURE, WOODWORK, AND SMOOTH-SURFACE FLOOR COVERINGS.
Claims use since Aug. 17, 1928.

CLASS 19

VEHICLES

Reg. No. 248,683. Registered Oct. 30, 1928. DIVCO-DETROIT CORPORATION, Detroit, Mich. Republished by Divco Corporation, Detroit, Mich., a corporation of Michigan.

DIVCO

FOR MOTOR TRUCKS AND CONSTRUCTIVE PARTS THEREOF.
Claims use since approximately Oct. 21, 1926.

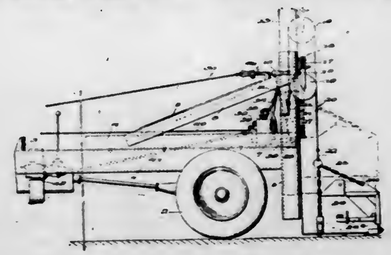
REISSUES



MARCH 2, 1948

22,978
FOOD PRODUCT
Gustavus J. Esselen, Swampscott, Mass.
No Drawing. Original No. 2,270,582, dated January 20, 1942, Serial No. 293,431, September 5, 1939. Application for reissue May 10, 1946, Serial No. 668,650
5 Claims. (Cl. 99—124)

1. A dry powdered soup base comprising essentially and predominantly monosodium glutamate and a thickening agent, said materials being in such proportions and capable of being readily dissolved and dispersed in water to form a broth.

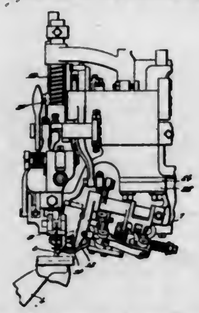
22,979
CONVEYING RIG
Walter E. Lambert, Maryville, Tenn., assignor to McMurray Structural Steel Company, Inc., Nashville, Tenn., a corporation of Tennessee
Original No. 2,210,323, dated August 6, 1940, Serial No. 118,653, December 31, 1936. Application for reissue November 5, 1947, Serial No. 784,141
19 Claims. (Cl. 214—119)

1. In conveying equipment, the combination of a rig having an upright trackway thereon, a shuttle operatively mounted in the trackway for up and down movement therein, one or more cable guides carried by the shuttle, a skip container of greater length than the width of the trackway, and flexible means laterally outside of the trackway and extending over the guide or guides and having one end thereof connected with the rig and the other end having means for detachable connection with the skip for raising and lowering the same upon up and down movement of the shuttle.

PLANT PATENTS

GRANTED MARCH 2, 1948

Owing to the fact that almost all of the illustrations of the plant patents are in colors, it is not practicable to print a cut of the drawing.

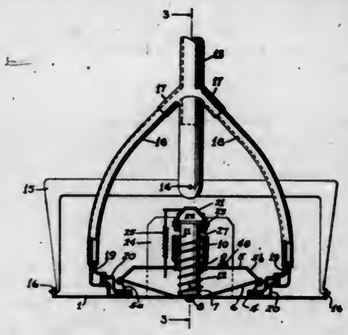


786
BUDDLEIA PLANT
Paul J. Schmidt, Youngstown, Ohio, assignor to The Wayside Gardens Company, Mentor, Ohio, a corporation of Ohio
Application December 6, 1946, Serial No. 714,442
1 Claim. (Cl. 47—69)

The new and distinct variety of buddleia plant herein shown and described, characterized particularly by the compact arrangement of the florets in the flower heads, the dwarfed growth, compact, bushy and globular shape of the plant as a whole, and further characterized in the very large number of inflorescences well proportioned to the size and shape of the plant as a whole, and the fact that it blooms during a period when few or no other flowering shrubs are in bloom.

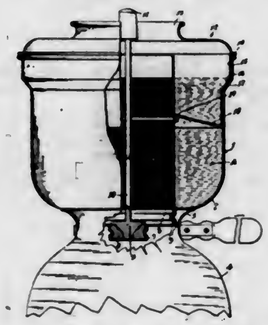
PATENTS

GRANTED MARCH 2, 1948



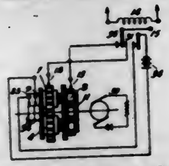
2,436,782
LOCK STITCH SEWING MACHINE
Guido J. Barbati, Beverly, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J., a corporation of New Jersey
Application November 23, 1946, Serial No. 712,005
3 Claims. (Cl. 112—36)

1. A lockstitch sewing machine having a main column, the upper portion of which contains stitch forming devices including a hook needle acting while its threaded hook is being retracted from the work to draw thread from the loop of needle thread in the preceding stitch, a shuttle acting to pull off thread from the supply for the next stitch, a take-up for pulling each needle loop from the shuttle partially back through the work, a shuttle supporting bracket on the upper portion of the column and a shoe supporting horn mounted on the column to extend within the shoe, in combination with means for enabling easy adjustment of the machine to optional use for thicker work, comprising a readily removable shim between the shuttle supporting bracket and the upper portion of the column, to cause the shuttle to draw each loop of needle thread to a higher position relatively to the horn for the thicker work.



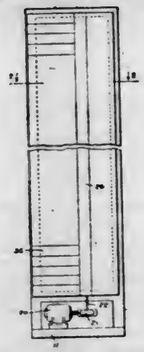
2,436,783
PRESSURE PLASTIC APPLICATOR
Robert G. Ames, Burlingame, Calif., assignor of one-half to George W. Williams and one-fourth to Stanley Ames, Burlingame, Calif.
Application December 12, 1944, Serial No. 567,826
12 Claims. (Cl. 72—130)

1. A pressure applicator comprising a plate having a top and bottom surface and an opening therein for the passage of a cementitious material therethrough, a casing communicating with the opening from the top of the plate, a flexible diaphragm dividing the casing into two compartments, one of the compartments communicating with the opening, means for feeding a cementitious material to the compartment that communicates with the opening, said compartment delivering the material through the opening and to the underside of the plate for application to a surface when the plate is applied thereto, said means including a prime mover for delivering the material under pressure to the material receiving compartment, and automatic control means actuated by the moving diaphragm when said compartment receives an excess of material



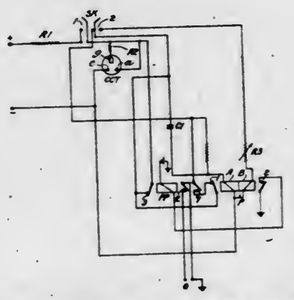
for stopping the prime mover from operating, whereby the material will be fed to the plate bottom surface as needed.

2,436,784
COFFEE BREWING APPARATUS
Richard E. Ballerino, Los Angeles, and Robert F. Ashdown, Montebello, Calif., assignors to Farmer Bros. Coffee Co., Los Angeles, Calif., a corporation of California
Application August 7, 1944, Serial No. 548,432
8 Claims. (Cl. 99—299)



1. A coffee making apparatus comprising: a receptacle including a discharge opening in its lower end; valve means for said opening having a handle accessible from the upper end of said receptacle; a tubular screen surrounding said opening and extending to the upper end of said receptacle, said screen defining with said receptacle an annular coffee grain receiving chamber; a cover for said receptacle including side walls fitting within said receptacle and an inturned partition at the lower extremities of said side walls forming the upper end of said chamber to hold said coffee grains submerged when said receptacle is filled with water.

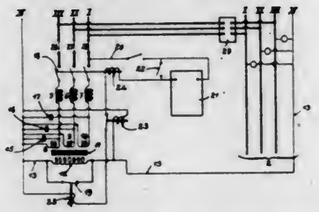
2,436,785
AUTOMATIC MEASUREMENT OF LENGTH BY MEANS OF ELECTRICAL IMPULSES
Jacques Bergier, Alfred Eskenazi, and André Helbronner, Lyon, France; vested in the Attorney General of the United States
Application February 26, 1943, Serial No. 477,310
2 Claims. (Cl. 177—380)



1. In a device for producing electrical impulses in number proportional to the extent of movement between relatively stationary and fixed parts of a machine, commutator discs having conducting and insulating segments, rotatably mounted side by side on said stationary part, said discs being formed with a different number of conducting segments operating to transmit controlling impulses from the commutator segments, operating connections between a movable part of said machine and one of said discs to rotate said one disc, an electromagnetic clutch carried by said discs and adapted when energized to cause the other disc to be rotated through said one disc, transmitting circuits corresponding to the respective brushes and conducting segments of the respective discs and relay circuits for energizing the transmitting circuits corresponding to said one disc and alternately energizing said clutch and the transmitting circuits corresponding to the other disc.

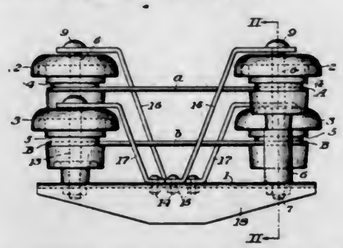
2,436,786
SELECTOR SWITCH MOUNTING FOR TELECOMMUNICATION SYSTEMS
Oscar J. J. Bracke, Antwerp, Belgium, assignor to International Standard Electric Corporation, New York, N. Y., a corporation of Delaware
Application March 1, 1943, Serial No. 477,645
In Great Britain June 20, 1939
7 Claims. (Cl. 179—27.5)

1. A selector switch bay and mounting comprising three spaced apart hollow uprights disposed between a vertical front plane and a vertical rear plane both being tangential to all said uprights and extending parallel to each other, transverse vertically spaced cross bars extending substantially in said front plane and connecting one of the two outer uprights with the central upright, a relay mounting plate disposed substantially in said front plane and connecting the other outer upright with the central upright, a plurality of vertically spaced brackets projecting forwardly from said central upright at right angles to said front plane, a vertical drive shaft carried by said bracket, vertically spaced gear wheels on said drive shaft, a multiple bank switch molding containing a plurality of superposed contact banks, said molding having contact projections on its front face and being provided on its back face with horizontal rows of terminal projections alternating with transverse grooves fitting over said cross bars, means to secure said molding without interference with the accessibility of said contact projections firmly to said first outer and central uprights, and means removably secured to said molding and adapted to carry for each contact bank a sliding brush and drive mechanism therefor, the latter including a flexible gear capable of meshing with one of the gears on said drive shaft.



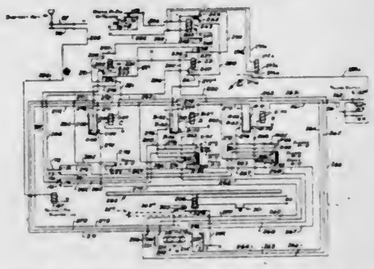
2,436,787
ARRANGEMENT FOR PRODUCING ELECTRIC IMPULSES
Frederick Harry Bray, London, England, assignor to Standard Telephones and Cables Limited, London, England, a British company
Application May 15, 1943, Serial No. 487,180
In Great Britain June 5, 1942
1 Claim. (Cl. 175—373)

In an arrangement for periodically opening and closing an electrical circuit, a source of potential, a condenser, a first non-polarized relay having two windings and normally open and normally closed contacts, a second relay having three sets of contacts, one normally open and arranged in series in said electrical circuit, another normally open and arranged in series in a final discharging circuit of said condenser, and one normally closed, means for connecting said source in series with the set of normally closed contacts of the second relay and one of said windings across the condenser to charge it, the current flowing through said winding in a given direction, means for connecting the second of said windings to said source so that the second mentioned normally closed contacts are in series therewith and current flows through said second winding in an opposite direction whereby the normally open contacts of said first relay remain open until the condenser has been charged to a predetermined level thereby causing the current flow through said first winding to diminish to a point at which the normally open contacts of said first relay are closed and its normally closed contacts are opened, and means responsive to the closing of the contacts of the first relay for actuating said second relay to open the normally



closed set of contacts thereof, thereby causing the condenser to discharge through said second winding, and to close its normally open sets of contacts in said electrical circuit and in said final discharging circuit, the normally open contacts of said first relay opening when the discharged current from said condenser falls below a predetermined value, and the normally closed contacts of said first relay closing at a second point said final discharging circuit a short time before said last mentioned circuit is opened by the deenergizing of the said second relay.

2,436,788
METHOD AND APPARATUS FOR CURVE DISTORTION OF ALTERNATING CURRENTS
Pierre Bricout, Senlis (Oise), France; vested in the Attorney General of the United States
Application April 21, 1942, Serial No. 439,904
In France April 28, 1941
5 Claims. (Cl. 175—363)

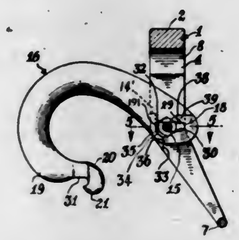


2. In an electric plant fed by three-phase alternating current, a three-phase alternating current supply having a neutral lead, a distribution network, an appliance for distorting the sinusoidal curve graphically representing said current so as to impart to said curve a trapezium-like outline, said appliance comprising three saturated choke coils each of which is interconnected to one of the respective phase leads of said supply and to an output point common to the three coils, a rectifier made up of three elements respectively connected to said leads and to a common output point connected to one terminal of the distribution network, and an injection transformer having its primary winding connected across the first-named common point and the neutral lead of the current supply and its secondary winding connected across said neutral lead and the opposite terminal of said network.

2,436,789
WIRE-TRANSPOSING DEVICE
Rogers Case, Orange, N. J.
Application March 28, 1945, Serial No. 585,320
3 Claims. (Cl. 174—33)

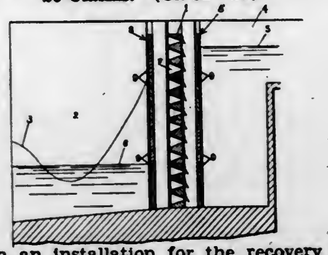
1. A position transposing and line balancing bracket for paired wires comprising a base, two pairs of spaced insulators mounted on the same side of the base with the said pairs of insulators located at the different diagonally opposed angles of an approximate rectangle formed by the arrangement of the said insulators, pintles supporting the said insulators rotatably with the insulators of each diagonal pair spaced from the said base equally with each other and unequally with the insulators of the other diagonal pair giving two different levels for the training of the paired wires by lateral insertion in contact with the outer surfaces of the insulators of the respective pairs in diagonally crossed and vertically spaced relation and for adjustment of the bracket along the wires with the bracket assembly depending from both the said wires, and two pairs of braces mounted with the said pairs parallel to each other on the said base and with the braces of each pair extended angularly from the upper region of the pintle of a higher insulator and a lower insulator respectively to connection with the base on the same side thereof.

2,436,790
ADDING MACHINE
Benjamin Cooper, Jersey City, N. J.
Application June 26, 1940, Serial No. 342,505
7 Claims. (Cl. 235—133)



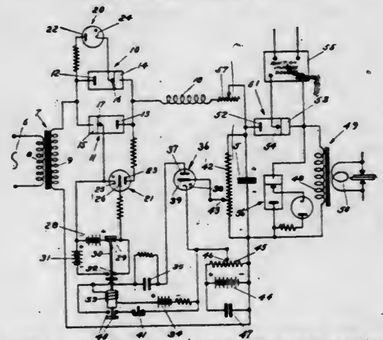
5. In a calculating machine having a pair of register wheels of adjoining denominational orders, a pair of electromagnets each for stepping one of said wheels, pulser means for energizing said electromagnets to effect entries into said wheels, reversible drive means intermediate said electromagnets and register wheels to effect additive or subtractive entries, and means for selectively conditioning said drive means; the combination of tens transfer means intermediate said register wheels comprising a transfer relay, a circuit for controlling said relay, transfer initiating contacts in said circuit closed by the wheel of lower order when in nine position, other transfer initiating contacts closed by said wheel of lower order when in zero position, further contacts in series with either of the above transfer initiating contacts and closed by the stepping electromagnet upon energization thereof to pick up said transfer relay either through said first or second transfer initiating contacts as the register wheel of lower order advances from nine to zero or zero to nine, means controlled by said drive conditioning means to selectively enable one or the other of said transfer initiating contacts, a transfer effecting circuit controlled by said relay whereby a transfer pulse is transmitted to the electromagnet of the higher order to impart an extra step to the higher order wheel, and means for holding said relay until a transfer operation of the higher order electromagnet is initiated.

2,436,791
TYPOGRAPHIC INK
Frank W. Cray, New York, N. Y., assignor to Interchemical Corporation, New York, N. Y., a corporation of Ohio
No Drawing. Application May 31, 1941, Serial No. 396,187
1 Claim. (Cl. 260—30)



A typographic printing ink comprising pigment dispersed in a varnish consisting essentially of a phenol-formaldehyde resin soluble in difficultly volatile petroleum distillates having dimethyl sulfate values of above 6.0 and substantially insoluble in such distillates having dimethyl sulfate values below about 4.0, in sufficient ratio to the solvent used to yield an ink of desired consistency, and a solvent consisting of from 20–80% of a petroleum distillate solvent evaporating at a rate represented by a 5–95% distillation range between 220–250° C. and 275–300° C., and having a dimethyl sulfate value above about 6.0, and from 80–20% of a petroleum distillate diluent evaporating at a rate represented by a 5–95% distillation range between 230–260° C. and 320–350° C, and having a dimethyl sulfate value below about 4.0 the low dimethyl sulfate solvent having a substantially higher distillation range than the high dimethyl sulfate solvent.

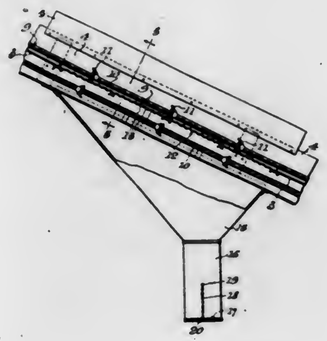
2,436,792
CARGO HOOK
Noël L. Dahlander, New Milford, Pa., assignor of one-half to Robert J. Earl, Deerfield Beach, Fla.
Application September 6, 1945, Serial No. 614,775
4 Claims. (Cl. 24—241)



3. A cargo hook comprising a clevis and a hook element, the clevis having side bars and extensions inclined to one another, a cross-piece at the end of said extensions, a pin at the intersection of said side bars and extensions, shoulders formed on said side bars adjacent to said pin, the hook element having an extended slot at one end to receive said pin, a finger at the other end of said hook element, a lip at the end of said finger to engage said cross-piece when said hook element is in closed position, two pairs of shoulders on said hook element, one pair of shoulders cooperating with the shoulders of said clevis when said hook element is in closed position to supplement said pin should said pin snap in cargo carrying position, the other pair of shoulders on said hook element cooperating with the shoulders on said clevis to limit the opening position of said hook element, the sides of said slot being parallel with the end faces of the shoulders on said clevis and of the end faces of the shoulders on said hook element to facilitate movement of the hook element relative to said pin to release the lip from said cross-piece.

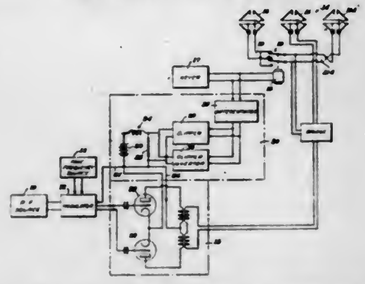
2,436,793
SEA WAVE POWER INSTALLATION
Pierre F. Danel, Grenoble, France, assignor to Ateliers Neyret-Beylier & Piccard-Pictet (Societe Anonyme), Grenoble, France
Application October 5, 1945, Serial No. 620,601
In France July 1, 1944
Section 1, Public Law 690, August 8, 1946
Patent expires January 7, 1964
20 Claims. (Cl. 61—20)

15. In an installation for the recovery from sea waves of energy in an economically useful form, the combination of a concentrating canal having side walls diverging toward the sea for receiving the waves and increasing their amplitude as they move inwardly therein, a reservoir at the inner end of the canal, a set of vertical guideways in the inside surfaces of the side walls of the canal, an impounding gate removably mounted in said guideways for conducting water from the canal to the reservoir and preventing return flow from the reservoir to the canal, a removable and replaceable watertight barrier for preventing access of water to the gate, a second set of vertical guideways in the inner surfaces of the side walls of the canal for receiving said barrier, filler elements removable from and replaceable in said second set of guideways and presenting, when in position in said guideways, outer surfaces which lie approximately flush with and in continuation of the surface of the canal wall, and means for locking removable elements of the installation against movement in their guideways under the buffeting of the sea.



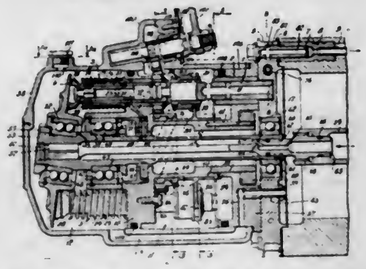
2,436,794
METHOD AND APPARATUS FOR CHARGING AN ELECTRICAL CONDENSER
John W. Dawson, West Newton, Mass., assignor to Raytheon Manufacturing Company, Newton, Mass., a corporation of Delaware
Application August 2, 1945, Serial No. 608,540
10 Claims. (Cl. 320—1)

1. The method of charging a storage condenser from an alternating current source to a potential



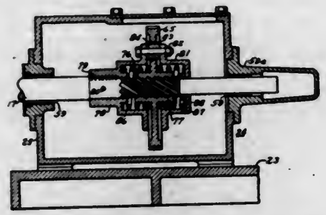
higher than the peak potential of said source comprising, applying alternating current from said source to a circuit resonant at the frequency of said source whereby the charge on said condenser alternates in direction and receives successive increments from said source, and disconnecting said condenser from said source at a time when the charge thereon is in a predetermined polarity and has attained a predetermined voltage above the voltage of said source.

2,436,795
MATERIAL CONVEYING AND SCREENING MACHINE
Raymond B. Dennis, Camp Blanding, Fla.
Application May 16, 1945, Serial No. 594,128
1 Claim. (Cl. 209—357)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



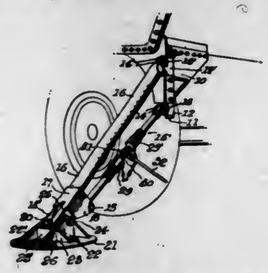
A material conveying machine comprising the combination with a carriage, of conveying mechanism supported thereon including a material receiving end and a delivery end and having a floor and side walls, a screen section positioned between the mid-point of the conveyor frame and the delivery end thereof and forming a portion of the floor, an endless flight conveyor including spaced, upstanding, rigidly mounted flight paddles having plane conveying surfaces operatively arranged on the frame and extending entirely across the floor transversely thereof for conveying material from the receiving end over the screen to tne delivery end, whereby the material is screened prior to reaching the delivery end, the screen being provided with a plurality of spaced transversely extending corrugations crossing the screen in one transverse direction only, the corrugations having their crests parallel to the conveying surfaces of the flight paddles and having aligned perforations therein disposed along the crest of each corrugation, whereby the material is given a rippling motion as it is conveyed over each corrugation of the screen by the flight paddles, thereby agitating the material for separating certain size material from the remainder thereof, the flight paddles moving across the screen in a plane continuously parallel to the plane of the crests of the corrugations.

2,436,796
KEYED RADIO BEACON
Louis A. De Rosa, West Brighton, Staten Island, N. Y., assignor to Federal Telephone and Radio Corporation, New York, N. Y., a corporation of Delaware
Application December 6, 1943, Serial No. 513,097
19 Claims. (Cl. 250—11)



1. A directive radio system comprising an energy translator, a directive antenna means, keying means for alternately coupling said translator to said directive antenna means in different energy transfer relationship for predetermined intervals to provide radiant action over patterns alternately overlapping a predetermined zone in space to provide a direction indication, and means responsive to each operation of said keying means for increasing the amplitude level of said energy applied to said antenna means at the beginning and end of each of said intervals.

2,436,797
FUEL INJECTION PUMP
Desire J. Deschamps, Rutherford, and Douglas C. Clarke, Mountain Lakes, N. J., and Frank E. Ferguson, Bronxville, N. Y., assignors to Deschamps Fuel Injection Corporation, New York, N. Y., a corporation of New York
Application December 27, 1943, Serial No. 515,696
11 Claims. (Cl. 103—173)

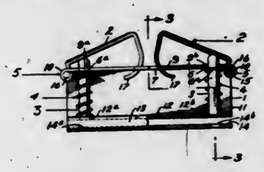


1. In a fuel injection pump, a mounting plate for attaching the pump to the engine, a plurality of pumping units each including a cylinder, a plunger cooperating therewith and a tappet mechanism for operating said plunger, a common support for said cylinders and tappet mechanisms, said support being secured to said mounting plate, actuating means for said tappet mechanisms, and a removable cover member secured to said mounting plate enclosing said pump mechanism, said pumping units and said actuating means being supported on said common support and independently of said cover member.

2,436,798
GEAR MECHANISM
James Dunlop, Ridgewood, N. J., assignor, by mesne assignments, to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application December 16, 1943, Serial No. 514,519
5 Claims. (Cl. 64—27)

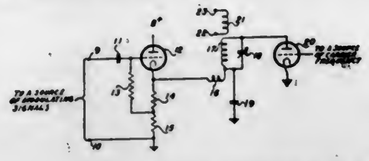
1. In a gear mechanism, a shaft, a gear wheel rotatably mounted on the shaft by a high helical angle screw thread, said gear wheel having a plurality of slots in its web, a pair of collars mounted on the shaft, one on each side of the gear wheel and spaced a predetermined distance therefrom, a plurality of bolts disposed through the collars and the slots in the gear wheel for limiting the relative rotative motion between the gear wheel and the shaft, means for fixing the collars on the shaft, and springs disposed between the collars and the gear wheel for biasing the gear wheel to a position midway between the collars.

2,436,799
OUTRIGGER TYPE SUPPORT
Lester P. Frost, United States Army, Fort Belvoir, Va.
Application July 7, 1945, Serial No. 603,729
2 Claims. (Cl. 188—7)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



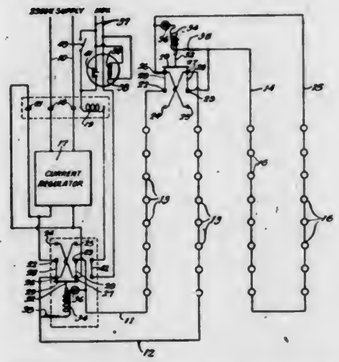
1. An outrigger support comprising a structure, a bracket mounted on said structure, a vertically extending shaft mounted on said bracket, spaced and vertically aligned sleeves mounted to rotate horizontally on said vertical shaft, an outrigger arm, an outrigger adjusting arm in the same vertical plane as said outrigger arm, horizontally extending pivot pins carried by said sleeves, the inner end of one of each of said arms pivotally mounted on one of each of said pins on said sleeves whereby the outer ends of said arms may be moved vertically upward on and horizontally with said sleeves on said vertical shaft, a foot, a casting pivotally mounted on said foot, said casting including a central bore and two sets of ears, said sets of ears extending in different planes, a hanger block fitted into one of said sets of ears, the outer end of said outrigger arm rigidly mounted in said central bore and the outer end of said outrigger adjusting arm pivotally connected to said other set of ears, and means mounted on and adapted to selectively extend and contract said adjusting arm for raising or lowering the outer end of said outrigger arm.

2,436,800
ADJUSTABLE STANCHION
Louis V. Fryzel and Rudolph Frohner, New York, N. Y.
Application August 24, 1945, Serial No. 612,518
7 Claims. (Cl. 248—354)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



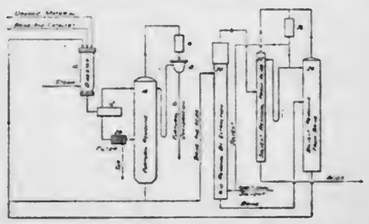
1. In combination, an adjustable support for temporarily holding and supporting fittings, said support having a longitudinal axis and providing an upper plane surface normal to said axis, means providing a second plane surface at a predetermined angle with the first-mentioned surface, and levelling means on said second plane surface whereby, when said axis is adjusted to bring said second surface into a horizontal position, said upper surface is at the predetermined angle with the horizontal.

2,436,801
PRACTICAL PAPER PERFORATOR
James Gasio, Los Angeles, Calif.
Application June 23, 1945, Serial No. 601,221
9 Claims. (Cl. 164—91)



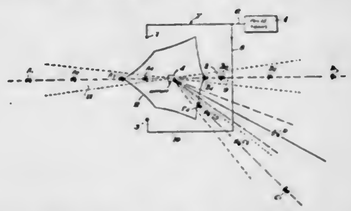
1. In a perforator, a frame member of modified S-shape configuration comprising top, intermediate and lower lateral runs separated by vertical runs, a pair of perforating elements guided for reciprocation in said top and intermediate runs, die elements in said bottom run cooperating with said perforating elements, and a pair of levers pivoted to said top run constructed and arranged to operate said perforating elements.

2,436,802
SYSTEM OF MODULATION UTILIZING A CATHODE FOLLOWER
Jack M. Giessner, Dayton, Ohio
Application September 4, 1945, Serial No. 614,341
4 Claims. (Cl. 179—171.5)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



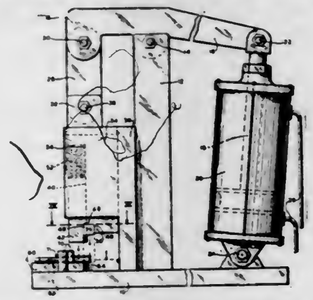
1. A modulation circuit comprising a source of modulating signals, a first vacuum tube having an anode, a cathode, and at least one control electrode, said electrode being connected to said source, a cathode resistor grounding said cathode, a second vacuum tube having an anode, a cathode, and at least one control electrode, a source of carrier frequency connected to the control electrode of said second tube, and a coupling circuit between the plate of said second tube and said cathode resistor, whereby said resistor furnishes varying anode potential for said second tube for varying the amplitude of said carrier frequency in said coupling circuit.

2,436,803
ELECTRIC CONTROL SYSTEM
Eugene H. Haug, Chicago, Ill., assignor to La Salle National Bank, Chicago, Ill., as trustee
Application August 23, 1943, Serial No. 499,597
1 Claim. (Cl. 171—119)



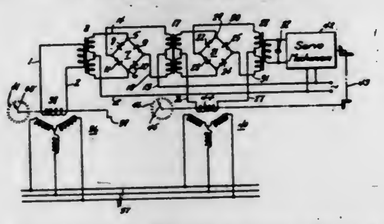
An electric control system for controlling connection of a source to a plurality of load circuits comprising a constant current regulator connected to the source, a protector switch with auxiliary contacts connecting the regulator to the first load circuit, said protector switch having a normal position in which it connects the regulator to the first load circuit and an off position in which it short circuits the regular output and the first load circuit, means responsive to the voltage across the first load circuit to control operation of the protector switch, a second protector switch having a normal position in which it connects the first and second load circuits in series and an off position in which it short circuits the second load circuit, and means responsive to the voltage across the second load circuit to control operation of the second protector switch.

2,436,804
PROCESS OF RECOVERING ORGANIC COMPOUNDS
John Stanley Hill, Laurel, Miss., assignor to Masonite Corporation, Laurel, Miss., a corporation of Delaware
Application July 19, 1943, Serial No. 495,383
11 Claims. (Cl. 260—347)



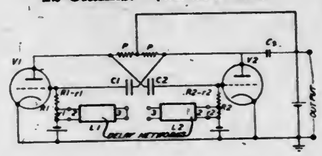
1. Process of manufacturing furfural and organic acids from material from which furfural, acetic and formic acids can be produced, which comprises the step of incorporating water-soluble metal-salt brine with said material, subjecting said material and brine to acid digestion, condensing and recovering the furfural produced, and treating the brine-containing organic acid with solvent material highly soluble in water to separate the mixed organic acid from the brine.

2,436,805
RADIO INDICATING SYSTEM
Ross B. Hoffman, Glen Ridge, N. J., assignor to Federal Telephone and Radio Corporation, New York, N. Y., a corporation of Delaware
Application October 2, 1944, Serial No. 556,719
6 Claims. (Cl. 250—11)



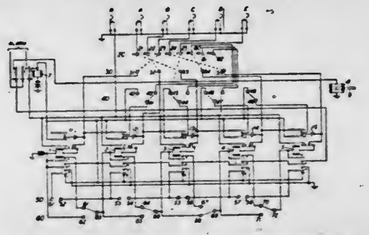
1. In a radio navigation system for aircraft incoming over a plurality of different courses to a common airport, a system for indicating the limit to which aircraft may approach said airport, comprising a plurality of radiators spaced about said airport, a radio pulses transmitter, means for coupling said transmitter to said antennas to simultaneously transmit the radio pulses to provide a composite pulse pattern about said airport, the transmitted pulses having a given spacing in a regular pattern about said airport, and indicator means on said aircraft for indicating the effective time spacing of the received pulses to provide an indication of said limit of approach, said indicator means comprising means responsive to the pulse first received for initiating a deblocking wave having a duration substantially equal to the greatest spacing of the pulses of said composite pattern, delay means for giving to said deblocking wave a delay substantially equal to said given spacing, mixer means for mixing said deblocking wave and said received pulses to provide a resultant wave, and an indicator responsive to said resultant wave.

2,436,806
FORMING AND SHEARING DEVICE
Everett M. Hunt, Portsmouth, N. H.
Application September 27, 1945, Serial No. 619,003
1 Claim. (Cl. 153—2)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



Apparatus for attaching a cleat to a handle and for substantially simultaneously shearing said cleat to the desired shape comprising, a frame having a power operated slide mounted for reciprocatory movement thereon, an anvil on said frame in alignment with said slide for supporting said handle and said cleat in cooperative relation therewith, said cleat being formed from a rectangular workpiece and having a U-shape, said handle being positioned within said U-shaped cleat, shearing means on said anvil, a forming member yieldingly mounted within said slide, and a second shearing means mounted on said slide, said anvil coacting with said forming member as it is pressed against the cleat to crimp said cleat about said handle, and then further holding said cleat in correct position for said shearing means to shear coactively said cleat to the desired shape upon further advance of said slide.

2,436,807
ELECTRICAL FOLLOW-UP SYSTEM
Eric J. Isbister, Brooklyn, N. Y., assignor to The Sperry Corporation, a corporation of Delaware
Application December 9, 1939, Serial No. 308,374
14 Claims. (Cl. 318—30)



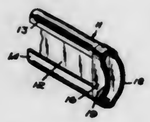
1. A synchro-transmitter-receiver system having a synchro-transmitter and synchro-receiver operating at a non-commercial frequency, a modulator fed from said synchro-transmitter, means for supplying a constant phase and magnitude commercial modulating frequency to said modulator, a demodulator fed from said modulator and supplied from said synchro-receiver with a demodulating potential, and a servo mechanism controlled from said demodulator, said servo mechanism being connected for operating said synchro-receiver for movement in synchronism with said synchro-transmitter.

2,436,808
MULTIVIBRATOR
Bent Bülow Jacobsen and Maurice Moise Lévy, London W. C. 2, England, assignors to Standard Telephones and Cables Limited, London, England, a British company
Application June 2, 1942, Serial No. 445,510
In Great Britain July 8, 1941
12 Claims. (Cl. 250—36)

1. A thermionic multivibrator for generating regularly repeated rectangular electrical impulses of short duration comprising two thermionic valves each having an anode, a cathode and at least one control electrode, the control grid of each valve being connected to the anode of the other valve with a timing condenser in said connection, a timing resistance connected between each control grid and the ground, a common source of anode potential for said valves, means for applying a biasing potential to said control grids, individual resistances being interposed between said common source and each anode, and a delay network for stabilizing the operation of said multivibrator and operated by impulses generated by said multivibrator without any other source of electric power, said network being connected to receive impulses generated by one of said valves and, after a predetermined interval, to deliver said impulses to one of said valves.

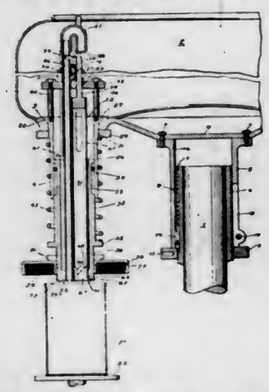
2,436,809
ELECTRIC COMBINATION LOCK
Amos E. Joel, Jr., New York, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application May 19, 1945, Serial No. 594,765
3 Claims. (Cl. 70—278)

1. An electric combination lock comprising a plurality of keys, a series of relays, lock control means responsive to the simultaneous operation of said series of relays, means for cross-connecting said keys and said relays to render said relays



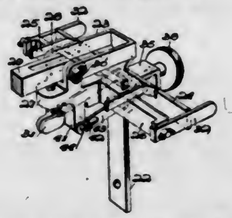
operable in response to the operation of said keys, means responsive to the operation of each relay to prepare an operating circuit for a succeeding relay, and means to cause certain of said relays to prepare the circuits of a plurality of succeeding relays.

2,436,810
KNIFE SHARPENER
George M. Jones, Jenkintown Manor, Pa., assignor to Luxor Corporation, Philadelphia, Pa., a corporation of Pennsylvania
Application November 1, 1945, Serial No. 626,008
2 Claims. (Cl. 76—87)



1. A knife-sharpener including a one-piece support of sheet-metal comprising a flat elongated base, a disc-supporting portion formed at an acute angle with said base and separated therefrom by a fold-line extending substantially more than half the length of said base, said portion being centrally-notched to provide a pair of side-by-side co-planar disc-supporting members, a disc-supporting boss formed integrally on each of said members, and a disc-retaining ear formed integrally on the outer edge of each of said members; and including a pair of centrally-apertured sharpening discs rotatably mounted on said bosses in co-planar relationship, said discs having cylindrical sharpening edges disposed in abutting relationship at the notch of said disc-supporting portion, said ears being folded around said discs generally in diametrically-opposed relationship to the point of abutment and serving to retain said discs upon said bosses in vertically immovable and uncantable position.

2,436,811
CURTAIN ROD OR SIMILAR ARTICLE
George M. Kenney, Cranston, and John F. Cavanagh, Providence, R. I., assignors to Kenney Manufacturing Company, Cranston, R. I., a corporation of Rhode Island
Application October 31, 1945, Serial No. 625,746
4 Claims. (Cl. 211—105.2)

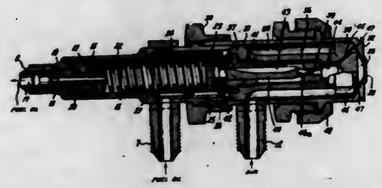


3. A telescopic curtain rod comprising inner and outer rod sections each having substantially flat front and rear walls, and a guard of U-shape in cross section and continuous in end elevation embracing the inner end of said outer rod section and permanently assembled therewith, said guard including substantially flat front and rear walls the leading edge of at least one of which is convexly rounded both transversely and as viewed in side elevation to facilitate entering of the outer rod section into, and its passage through, a rod accommodating pocket in the heading of a curtain.

2,436,812
FILLING MACHINE
Charles E. Kerr, Hoopeston, Ill., assignor to Food Machinery Corporation, San Jose, Calif., a corporation of Delaware
Application May 12, 1944, Serial No. 535,252
20 Claims. (Cl. 226—98)

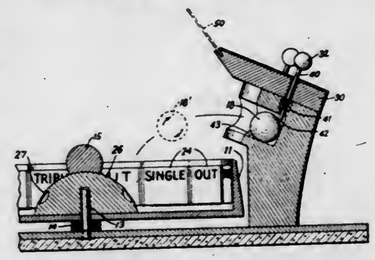
17. In a container filling machine having a vertically movable container support for raising and lowering a container to be filled, a filling valve, a movable filling tube within said valve, and means cooperatively associated with said valve and tube and responsive to the upward movement of the container for moving the filling tube downwardly with respect to said valve into the container upon upward movement of the container by said support toward said valve.

2,436,813
SWINGING SCAFFOLD
Rolph J. Lackner, Richmond Hill, N. Y., assignor to Emma H. Lackner, Richmond Hill, N. Y.
Application October 7, 1946, Serial No. 701,701
5 Claims. (Cl. 304—19)



3. A safety device for swinging scaffolds including a fixed jaw and a movable jaw disposed at opposite sides of the scaffold suspending rope and normally free thereof, a pivoted lever movable upwardly away from the movable jaw independently thereof and downwardly to operatively coact with said movable jaw for rocking the same toward the fixed jaw to clamp said rope therebetween, means for supporting said jaws and the lever from a pulley block of the scaffold, a connection between the free end of said lever and an end of the scaffold platform whereby dropping of said end of the platform will cause actuation of the movable jaw to grip the suspending rope between said jaws, locking mechanism for the movable jaw carried by said means and including a manually rotatable screw shaft, a crosshead screwed on said shaft and shiftable by turning the shaft, and a connection between said crosshead and the movable jaw operable as the crosshead is shifted for swinging the movable jaw toward the fixed jaw independently of said lever and clamping the rope between the jaws.

2,436,814
ORTHO-TOLIDINE TABLET COMPOSITION
James L. Leitch, Bel Air, Md.
No Drawing. Application June 8, 1943, Serial No. 490,055
7 Claims. (Cl. 252—408)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

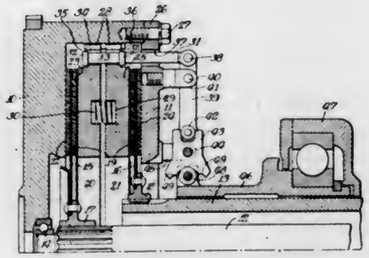


1. An ortho-tolidine tablet composition adapted to be used in determining the residual chlorine content of a water sample, which consists essentially of: ortho-tolidine dihydrochloride; a sufficient amount of alkali metal acid sulfate in predetermined proportion to the ortho-tolidine content so that, when a sufficient amount of ortho-tolidine in tablet form is added to said water sample whereby upon reaction thereof with the residual chlorine therein only the partial oxidation product of the ortho-tolidine will be formed as distinguished from the completely oxidized product thereof, the alkali metal acid sulfate will be sufficient to impart to said water sample an acidity of at least pH 2; and, sufficient non-alkaline inert filler material to give mass to tablets made from said tablet composition and serve as a binder for the active ingredients thereof; said non-alkaline inert filler material being non-reactive with either the residual chlorine or the ortho-tolidine.

2,436,815
PRESSURE OPERATED VALVE
Walter O. Lum, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
Application March 15, 1944, Serial No. 526,584
4 Claims. (Cl. 137—153)

1. In a variable pressure wide-range fluid metering device, the combination of a casing having walls forming a bore including an inlet chamber and a fluid control opening and a discharge opening in series flow relation, an axially slidable metering pin disposed in the bore and adapted to project at least partially into and cooperate with the discharge opening, said metering pin having a first portion cooperating with the discharge opening to form a positive shut-off valve and a second axially spaced portion shaped to define with the fluid control opening a variable area metering orifice in series flow relation with the shut-off valve, means responsive to pressure in the inlet chamber for positioning the metering pin to consecutively open the shut-off valve and then vary the size of the metering orifice as a predetermined function of increasing inlet chamber pressure, said pressure responsive means including a piston connected to the metering pin and slidably disposed in said bore with an outer end surface subjected to fluid inlet pressure tending to move the piston toward metering position, means biasing the piston to valve-closing position, means for adjusting said biasing means, the shape of said second portion of the metering pin being so related to the fluid control opening that a metering orifice is formed only during the occurrence of a pressure in the inlet chamber above a preselected minimum value, and passage means associated with the casing and piston for by-passing fluid to equalize the pressure difference across the piston throughout a limited range of positions adjacent the valve-closed position, whereby the piston is caused to move quickly between the valve-closed position and the minimum flow metering position.

2,436,816
BASEBALL GAME
Maxmillian C. Meyer, Brooklyn, N. Y.
Application August 21, 1943, Serial No. 499,522
7 Claims. (Cl. 273—93)



3. In a baseball game in which a ball is propelled into a wheel element containing a plurality of separate compartments, which wheel element is adapted to be rotated, a pitching and batting stand rising above and positioned adjacent to said wheel element and being mounted on a support, said stand having on opposite sides a pitching side and a batting side, said pitching side being concealed from said batting side, a plurality of holes in the pitching side facing said wheel element, said ball being adapted to be placed in any one of said holes, a plurality of plungers on the batting side one plunger for each of said holes, each of said plungers being yieldably supported so that the tapping of a selected plunger moves one end of said plunger into its respective hole and thereby expels the ball from the hole into said wheel element.

2,436,817
CLUTCH ACTUATING MECHANISM
Kay Miller, Kalamazoo, Mich., assignor, by mesne assignments, to Dana Corporation, Toledo, Ohio, a corporation of Virginia
Original application December 8, 1941, Serial No. 422,045. Divided and this application July 22, 1944, Serial No. 546,171
19 Claims. (Cl. 192—68)

1. In a friction clutch, the combination of a flywheel constituting the driving element, a clutch

disk constituting the driven element, a pressure plate for engaging the clutch disk with the flywheel and comprising relatively axially movable parts, spring means caged between said pressure plate parts in preloaded condition, one or more pressure plate actuating members having a lost motion operating connection with said axially movable parts so as to permit movement relative to one of said parts upon movement with the

other of said parts in engagement and disengagement of the clutch, said spring means normally maintaining the lost motion connection in fully extended condition, said members extending from the pressure plate to engage the clutch and further compress the aforesaid spring means so that the clutch is engaged resiliently under increased spring pressure, and clutch engaging means cooperating with said actuating members to move the pressure plate.

2,436,818

COSMETIC PREPARATIONS

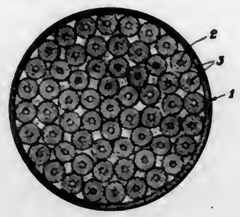
Sidney Musher, New York, N. Y., assignor to Musher Foundation Incorporated, New York, N. Y., a corporation of New York

No Drawing. Application May 11, 1945, Serial No. 593,324

10 Claims. (Cl. 167—91)

3. A cosmetic preparation comprising as one of the ingredients an emollient and as another ingredient a small amount of the finely divided coarse fraction of dehulled oats, said finely divided coarse fraction being substantially free of those particles which will go through a 60 mesh screen when the dehulled oats are ground to a fineness that will permit a major proportion thereof to pass through a 60 mesh screen, said fraction in combination with the emollient having a general soothing effect, a high covering power, lubricating properties, a mild bleaching effect and a combined adhesiveness not characteristic of oat flour and oat meal.

2,436,819



METHOD OF FORMING GLASS BEADS

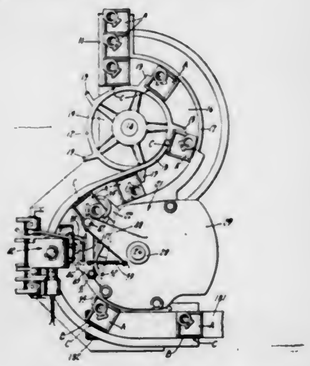
Samuel W. Neidorf, Nutley, N. J., assignor to Federal Telephone and Radio Corporation, New York, N. Y., a corporation of Delaware

Application June 23, 1944, Serial No. 541,768

7 Claims. (Cl. 125—12)

6. A method of simultaneously segmenting a plurality of glass tubes into beads of uniform size and shape comprising assembling the tubes in parallel fashion in a container, introducing into the container a cementitious material comprising a water-soluble synthetic polymer in sufficient quantity and in such a manner to fill up the air spaces within said container and thereby prevent the slipping and vibration of the tubes, cutting through said mass of material and tubes intermediate the ends thereof to transform said tubes into beads of desired length, washing the

cut beads with water to dissolve the cementitious material and to separate the beads from one another and removing the water containing the dissolved material from said beads.



2,436,820

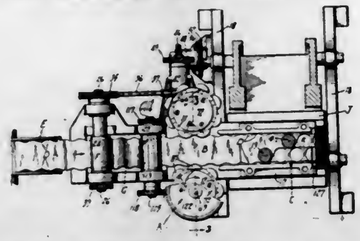
MEANS FOR FEEDING ARTICLES TO BE MARKED

Ronald E. J. Nordquist, Maplewood, and Herbert F. Cox, Jr., Summit, N. J., assignors to American Can Company, New York, N. Y., a corporation of New Jersey

Original application June 29, 1940, Serial No. 343,296. Divided and this application September 13, 1944, Serial No. 553,936

5 Claims. (Cl. 101—44)

1. In a mechanism for feeding containers through a machine wherein the containers are successively treated at a fixed station, the combination of means for continuously advancing the containers in processional order along a path of travel, a plurality of rotatable container propelling arms for successively engaging the containers during their advancement, means for periodically moving said arms relative to said advancing means to accelerate the movement of a said container into position at said station sufficiently in advance of a succeeding container to establish a time interval for the treating operation, and means at said station operating in timed relation to said advancing and accelerating means for temporarily holding said container stationary for the treating operation.



2,436,821

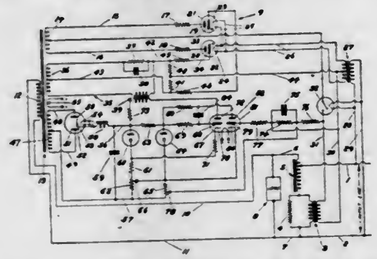
FEEDING AND GAUGING MECHANISM

Ronald E. J. Nordquist, Maplewood, N. J., assignor to American Can Company, New York, N. Y., a corporation of New Jersey

Application June 28, 1944, Serial No. 542,564

6 Claims. (Cl. 271—2.4)

1. In a mechanism for accurately feeding a strip having an undulated edge as an incident to preparing articles therefrom, the combination of spaced turrets located at opposite edges of said strip, a said turret having radially movable means thereon for fitting into the adjacent undulated edge and for gauging the position of said strip, means for moving said radially movable means into engagement with opposite edges of the strip, and means for intermittently rotating a said turret to accurately advance said strip by its engaged undulated edge, said turret holding the strip in a definite position in between its intermittent rotations for preparation of said articles.



2,436,822

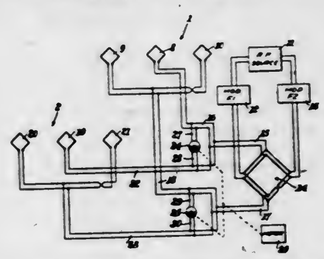
STABILIZER FOR ALTERNATING-CURRENT LINE REGULATORS

Paul H. Odessey, Great Neck, N. Y., assignor to Raytheon Manufacturing Company, Newton, Mass., a corporation of Delaware

Application February 10, 1945, Serial No. 577,273

7 Claims. (Cl. 323—89)

1. In a circuit for stabilizing the operation of the control means of an A.-C. line regulating system, means for comparing the magnitude of the A.-C. output of said system with a reference potential established therein, and deriving therefrom a variable D. C. proportional to the difference therebetweeen, comprising: means for rectifying a portion of said A.-C. output; an automatically variable impedance, receptive of the output of said rectifying means, and presenting a constant voltage drop thereacross; a second automatically variable impedance in series with a fixed impedance, connected in shunt with said first automatically variable impedance, likewise receptive of the output of said rectifying means, and presenting a variable potential, at the junction of said series connection, in response to fluctuations in said A.-C. output; and an electronic discharge device having its input connected across the series network including said fixed impedance and said first automatically variable impedance, whereby the difference between said variable potential and said constant voltage drop is applied thereto and amplified thereby.



2,436,823

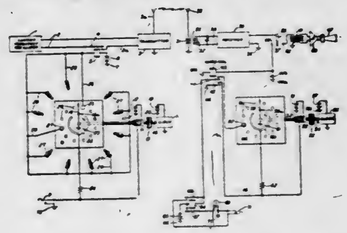
COURSE MODIFYING SYSTEM

Sidney B. Pickles, Jackson Heights, N. Y., assignor to Federal Telephone and Radio Corporation, New York, N. Y., a corporation of Delaware

Application July 7, 1945, Serial No. 603,689

11 Claims. (Cl. 250—11)

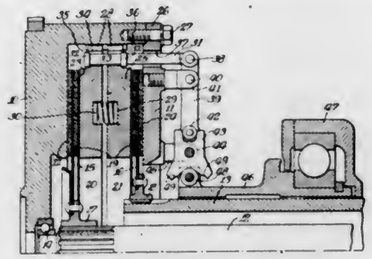
1. In a radio beacon system of the type wherein a course is defined by directively transmitted radio signals, a system for reducing interference effects caused by reradiating objects in the path of said radiated signals, comprising a second radio beacon spaced from the first beacon a distance at least one-half a wavelength at the operating radio frequency, a modulated signal source, and means for effectively coupling said signal source successively to said first beacon and said second beacon.



2,436,824

RADIO PAGING FOR VEHICLES

Ralph K. Potter, Morristown, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York



Application December 22, 1944, Serial No. 569,347

12 Claims. (Cl. 250—6)

1. A radio message receiver and announcing system comprising radio receiver apparatus having output terminals, a selector having a movable contactor, a message translator, a constantly operating motor, an announcing device, means responsive to a first pulsed signal received by said radio receiver for causing the selector to mechanically connect the movable contactor to the motor, means responsive to a second pulsed signal received by said radio receiver at a predetermined interval after the preceding signal to en-

disk constituting the driven element, a pressure plate for engaging the clutch disk with the flywheel and comprising relatively axially movable parts, spring means caged between said pressure plate parts in preloaded condition, one or more pressure plate actuating members having a lost motion operating connection with said axially movable parts so as to permit movement relative to one of said parts upon movement with the

other of said parts in engagement and disengagement of the clutch, said spring means normally maintaining the lost motion connection in fully extended condition, said members extending from the pressure plate to engage the clutch and further compress the aforesaid spring means so that the clutch is engaged resiliently under increased spring pressure, and clutch engaging means cooperating with said actuating members to move the pressure plate.

2,436,818

COSMETIC PREPARATIONS

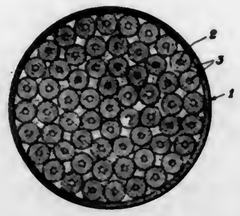
Sidney Musher, New York, N. Y., assignor to Musher Foundation Incorporated, New York, N. Y., a corporation of New York

No Drawing. Application May 11, 1945, Serial No. 593,324

10 Claims. (Cl. 167—91)

3. A cosmetic preparation comprising as one of the ingredients an emollient and as another ingredient a small amount of the finely divided coarse fraction of dehulled oats, said finely divided coarse fraction being substantially free of those particles which will go through a 60 mesh screen when the dehulled oats are ground to a fineness that will permit a major proportion thereof to pass through a 60 mesh screen, said fraction in combination with the emollient having a general soothing effect, a high covering power, lubricating properties, a mild bleaching effect and a combined adhesiveness not characteristic of oat flour and oat meal.

2,436,819



METHOD OF FORMING GLASS BEADS

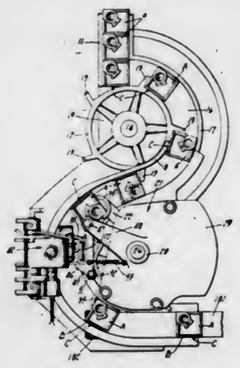
Samuel W. Neidorf, Nutley, N. J., assignor to Federal Telephone and Radio Corporation, New York, N. Y., a corporation of Delaware

Application June 23, 19[illegible]4, Serial No. 541,768

7 Claims. (Cl. 125—12)

6. A method of simultaneously segmenting a plurality of glass tubes into beads of uniform size and shape comprising assembling the tubes in parallel fashion in a container, introducing into the container a cementitious material comprising a water-soluble synthetic polymer in sufficient quantity and in such a manner to fill up the air spaces within said container and thereby prevent the slipping and vibration of the tubes, cutting through said mass of material and tubes intermediate the ends thereof to transform said tubes into beads of desired length, washing the

cut beads with water to dissolve the cementitious material and to separate the beads from one another and removing the water containing the dissolved material from said beads.



2,436,820

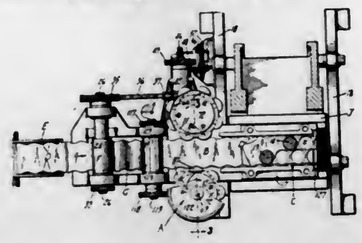
MEANS FOR FEEDING ARTICLES TO BE MARKED

Ronald E. J. Nordquist, Maplewood, and Herbert F. Cox, Jr., Summit, N. J., assignors to American Can Company, New York, N. Y., a corporation of New Jersey

Original application June 29, 1940, Serial No. 343,296. Divided and this application September 13, 1944, Serial No. 553,936

5 Claims. (Cl. 101—44)

1. In a mechanism for feeding containers through a machine wherein the containers are successively treated at a fixed station, the combination of means for continuously advancing the containers in processional order along a path of travel, a plurality of rotatable container propelling arms for successively engaging the containers during their advancement, means for periodically moving said arms relative to said advancing means to accelerate the movement of a said container into position at said station sufficiently in advance of a succeeding container to establish a time interval for the treating operation, and means at said station operating in timed relation to said advancing and accelerating means for temporarily holding said container stationary for the treating operation.



2,436,821

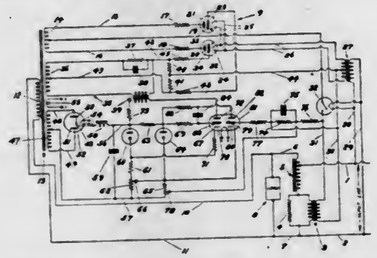
FEEDING AND GAUGING MECHANISM

Ronald E. J. Nordquist, Maplewood, N. J., assignor to American Can Company, New York, N. Y., a corporation of New Jersey

Application June 28, 1944, Serial No. 542,564

6 Claims. (Cl. 271—2.4)

1. In a mechanism for accurately feeding a strip having an undulated edge as an incident to preparing articles therefrom, the combination of spaced turrets located at opposite edges of said strip, a said turret having radially movable means thereon for fitting into the adjacent undulated edge and for gauging the position of said strip, means for moving said radially movable means into engagement with opposite edges of the strip, and means for intermittently rotating a said turret to accurately advance said strip by its engaged undulated edge, said turret holding the strip in a definite position in between its intermittent rotations for preparation of said articles.



2,436,822

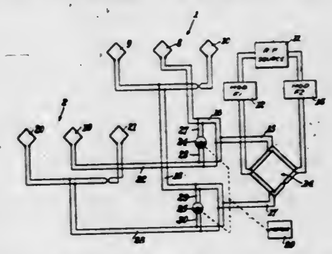
STABILIZER FOR ALTERNATING-CURRENT LINE REGULATORS

Paul H. Odessey, Great Neck, N. Y., assignor to Raytheon Manufacturing Company, Newton, Mass., a corporation of Delaware

Application February 10, 1945, Serial No. 577,273

7 Claims. (Cl. 323—89)

1. In a circuit for stabilizing the operation of the control means of an A.-C. line regulating system, means for comparing the magnitude of the A.-C. output of said system with a reference potential established therein, and deriving therefrom a variable D. C. proportional to the difference therebetweeen, comprising: means for rectifying a portion of said A.-C. output; an automatically variable impedance, receptive of the output of said rectifying means, and presenting a constant voltage drop thereacross; a second automatically variable impedance in series with a fixed impedance, connected in shunt with said first automatically variable impedance, likewise receptive of the output of said rectifying means, and presenting a variable potential, at the junction of said series connection, in response to fluctuations in said A.-C. output; and an electronic discharge device having its input connected across the series network including said fixed impedance and said first automatically variable impedance, whereby the difference between said variable potential and said constant voltage drop is applied thereto and amplified thereby.



2,436,823

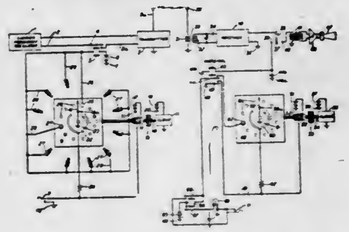
COURSE MODIFYING SYSTEM

Sidney B. Pickles, Jackson Heights, N. Y., assignor to Federal Telephone and Radio Corporation, New York, N. Y., a corporation of Delaware

Application July 7, 1945, Serial No. 603,689

11 Claims. (Cl. 250—11)

1. In a radio beacon system of the type wherein a course is defined by directively transmitted radio signals, a system for reducing interference effects caused by reradiating objects in the path of said radiated signals, comprising a second radio beacon spaced from the first beacon a distance at least one-half a wavelength at the operating radio frequency, a modulated signal source, and means for effectively coupling said signal source successively to said first beacon and said second beacon.



2,436,824

RADIO PAGING FOR VEHICLES

Ralph K. Potter, Morristown, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York

Application December 22, 1944, Serial No. 569,347

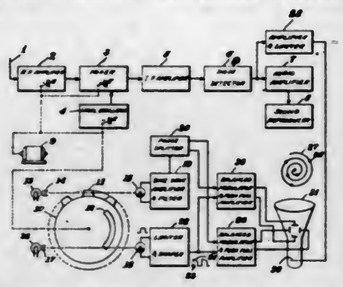
12 Claims. (Cl. 250—6)

1. A radio message receiver and announcing system comprising radio receiver apparatus having output terminals, a selector having a movable contactor, a message translator, a constantly operating motor, an announcing device, means responsive to a first pulsed signal received by said radio receiver for causing the selector to mechanically connect the movable contactor to the motor, means responsive to a second pulsed signal received by said radio receiver at a predetermined interval after the preceding signal to en-

able the motor-driven movable contactor of the selector to actuate the announcing device and means whereby the selector or the message translator may be alternatively connected to said output terminals.

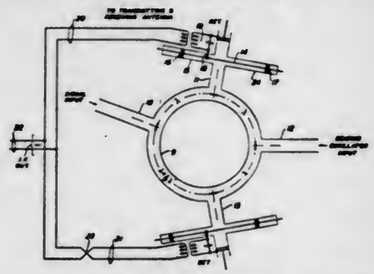
2,436,825
SUPEROPAQUE ENAMEL
Harold D. Prior, Plainfield, N. J., assignor to The Titanium Alloy Manufacturing Company, New York, N. Y., a corporation of Maine
No Drawing. Application May 24, 1946, Serial No. 672,164
3 Claims. (Cl. 106—48)

1. A composition suitable for vitreous enamels comprising 3–6% Na_2O, 1–5% K_2O, 3–5% Li_2O, 1–3% BaO, 1–5% CaO, 5–7% ZnO, 7–9% B_2O_3, 20–25% Al_2O_3, 22–25% P_2O_5, 7–15% SiO_2, 3–5% F_2 and 6–10% ZrO_2.



2,436,826
PRIMER
Eugene D. Regad and Andrew T. Anderson, Dover, N. J.
Application September 15, 1942, Serial No. 458,443
4 Claims. (Cl. 102—86.5)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

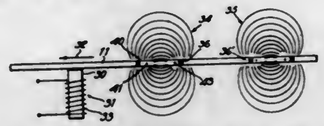
1. A laminated primer tube consisting of an elongated hollow cylinder having as sidewalls a single continuous sheet of flexible material spirally wound upon itself in layers, said sidewalls having areas of lesser thickness than the remaining portions whereby the areas having the lesser thickness will be ruptured by the primer blast to permit passage of the primer flash.



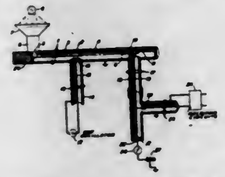
2,436,827
CHANNEL IDENTIFYING SYSTEM
Avery G. Richardson, Boonton, and Milton Dishal and Jesse S. Le Grand, Nutley, N. J., assignors to Federal Telephone and Radio Corporation, New York, N. Y., a corporation of Delaware
Application March 9, 1946, Serial No. 653,266
18 Claims. (Cl. 315—24)

1. A cathode ray tube having a screen and beam deflecting means; and means producing a spiral trace on said screen comprising light-emitting means, a first and second photoelectric means, a member mounted for cyclic motion adapted to periodically direct light from the light-emitting means to said first and second photoelectric means, means coupled to said beam deflecting means and controlled by said first photoelectric means for producing voltages tending to form a circular trace on said screen, and means controlled by said second photoelectric

means for modulating said voltages to produce a spiral trace.



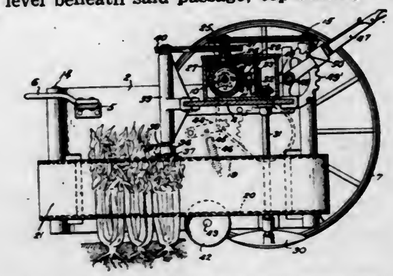
2,436,828
COUPLING ARRANGEMENT FOR USE IN WAVE TRANSMISSION SYSTEMS
Douglas H. Ring, Red Bank, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application December 31, 1942, Serial No. 470,812
4 Claims. (Cl. 250—20)



1. In combination in a wave transmission system, a tubular uni-conductor forming a closed transmission loop, four branch transmission circuits connected symmetrically thereto at spaced points around the loop, each by a series electrical connection, one of said branch transmission circuits comprising a source of signal waves of given frequency feeding into said loop, a second branch transmission circuit comprising a source of beating waves of different frequency feeding into said loop, and at least one of the two other branch transmission circuits including means for combining the portions of said signal waves and said beating waves diverted therein from said loop and means for making the relative electrical characteristics of the portions of the looped conductor connecting said four branch transmission circuits such that each of said two other branch circuits will receive part of the wave power impressed on said loop by said one or said second branch circuit and the fourth branch circuit will receive substantially none of this wave power.

2,436,829
BIPOLAR MAGNETIC CONTROL RECORD
Robert I. Roth, Hawthorne, N. Y., assignor to International Business Machines Corporation, New York, N. Y., a corporation of New York
Application January 31, 1945, Serial No. 575,511
7 Claims. (Cl. 235—61.12)

1. In a control record for a record controlled machine having a monopolar reading device, the record being read by relative motion of the record and the reading device, a sheet of generally non-magnetized material having significantly located discrete bipolar magnetic spots, the axes of the spots being in the plane of the sheet and parallel to the direction of relative motion of the record and the reading device.

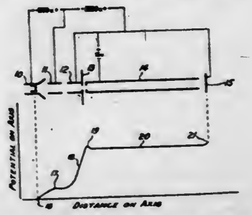


2,436,830
TRANSMISSION SYSTEM AND METHOD
William M. Sharpless, Fair Haven, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application April 19, 1943, Serial No. 483,607
7 Claims. (Cl. 250—20)

3. The combination in a system for converting signal waves of high-frequency into signal waves of intermediate frequency of a converter comprising input sections, a converting section, and an output section all physically joined to form a unitary structure, a source of high-frequency signal waves, a source of beat-frequency waves, means for connecting said sources to said input sections, a translating element removably attached to said converting section, coupling means for conducting the waves in said input sections by way of the converting section to said translating element, the length of said converting section being chosen to tune it to said high-frequency waves, by-pass means near the junction of the converting and output sections for excluding the high-frequency waves from said output section, the length of said output section being chosen to bring the end thereof into coincidence with the nodal point of the intermediate frequency waves therein, a source of direct voltage, a circuit connecting said source to the nodal point of said output section for applying the voltage thereof across said translating element, and by-pass means at said nodal point for excluding said intermediate frequency waves from the circuit to said voltage source.

2,436,831
CELERY HARVESTER
Willard C. Silva, Sarasota, Fla.
Application May 15, 1944, Serial No. 535,729
14 Claims. (Cl. 55—108)

1. Celery harvester comprising a frame, means carried thereby providing rearwardly moving, rearwardly convergent, spaced side walls defining a passage open at the bottom and ends for the longitudinal travel therethrough of standing celery, said walls being spaced from the ground and of such height as to engage the bushy part of the celery in an intermediate zone above the root and below the top whereby the bushy part is progressively compacted as it travels from the wide to the narrow end of said passage, root cutting means carried by said frame working at a level beneath said passage, top cutting means



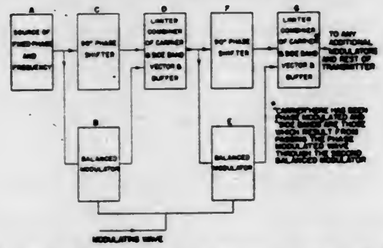
working at a level adjacent the top of said passage, positioned at a point in the length of said passage where the celery is partially compacted, said top cutting means being positioned in advance of said root cutting means whereby the top is severed while the celery is standing.

2,436,832
CONNECTING DEVICE AND METHOD OF MAKING THE SAME
Ernest V. Soreny, New York, N. Y., assignor to Federal Telephone and Radio Corporation, Newark, N. J., a corporation of Delaware
Application August 13, 1943, Serial No. 498,452
8 Claims. (Cl. 173—363)

1. In the manufacture of wire contacts for an electrical connector, the method which comprises forming wire into a pair of helices, producing a pair of oppositely-disposed inwardly-projecting indentations in each convolution of the helices, and interwinding the coils of the helices so that the indentations in each adjacent convolution of the interwound helices are disposed angularly to one another in planes substantially perpendicular to the axis of the interwound helices.

2,436,833
HIGH DENSITY BEAM TUBE
Karl Spangenberg, Lester M. Field, and Robert Helm, Palo Alto, Calif., assignors to International Standard Electric Corporation, New York, N. Y., a corporation of Delaware
Application June 15, 1942, Serial No. 447,194
14 Claims. (Cl. 315—16)

1. An electron beam tube including means for generating electrons, means for producing a



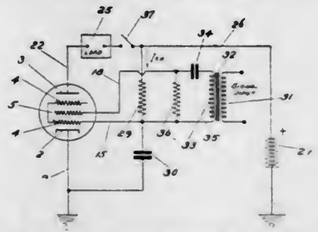
beam of said electrons, means for accelerating said beam, means for defining a substantially field-free space through which said beam passes, means for collecting said beam after passage through said field-free space, and means for maintaining said field-free space defining means at an electrostatic potential slightly negative with respect to said collecting means and with respect to the portion of said accelerating means adjacent said defining means.

2,436,834

PHASE AND FREQUENCY MODULATION

Edwin K. Stodola, Neptune, N. J.

Application November 17, 1942, Serial No. 465,920
6 Claims. (Cl. 179—171.5)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



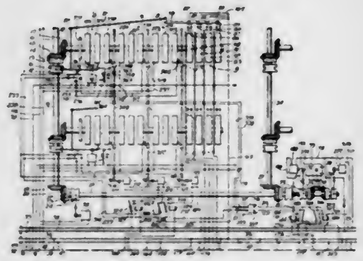
1. A wave-length modulation system for a source of oscillations of relatively fixed frequency comprising a pair of phase modulators, one of said modulators comprising a capacitor and resistor connected in series to said source, a coupling circuit connected across said resistor and to the other modulator, said other modulator comprising an inductor and resistor connected in series to said coupling circuit, and means for varying the resistances of said resistors in opposite senses.

2,436,835

CONTROL CIRCUIT FOR GAS DISCHARGE TUBES

Paul W. Stutsman, Needham, Mass., assignor, by mesne assignments, to Raytheon Manufacturing Company, Newton, Mass., a corporation of Delaware

Application May 6, 1944, Serial No. 534,494
6 Claims. (Cl. 315—60)



1. An electrical system comprising an electrical discharge tube containing an ionizable gas at a substantial pressure, a cathode, an anode for maintaining a discharge to said cathode, an auxiliary electrode for maintaining an auxiliary intermittent discharge to said cathode, and a control electrode interposed in the discharge path between said cathode and anode and adapted to control the initiation of said discharge between said anode and cathode, a circuit for applying a voltage between said cathode and anode tending to cause a discharge between them, a circuit interconnecting said cathode and auxiliary electrode for causing said intermittent discharge, and means for applying a signal voltage to said control electrode to cause said discharge between said anode and cathode to be initiated during an impulse of said intermittent discharge.

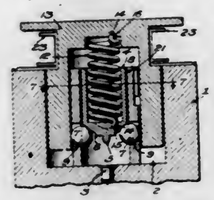
2,436,836

INFORMATION POSTING BOARD

Warren Thorpe, Lawrence, N. Y.

Application December 19, 1945, Serial No. 635,966
17 Claims. (Cl. 177—353)

3. The combination of a display board having a plurality of columns of display areas, the display areas of the several columns being in alinement with one another to form a plurality of transverse rows of display areas, a group of information display wheels for each area rotatable to display various information according to the peripheral surface of the wheels being displayed, a horizontal driven shaft for the display wheels of each area, an intermediate vertical shaft for each column of display wheels, a horizontal drive shaft, a clutch for drivingly connecting each driven shaft with one of said intermediate shafts, a second clutch for drivingly connecting each intermediate shaft with said drive shaft, a motor, a reversible clutch to drivingly connect said motor to actuate said drive shaft in either direction, a first control board common to all areas, means including movable contacts for operatively connecting said first control board with the clutches between said driven shafts and said intermediate shafts to select one of the groups of display wheels for actuation, and a second control board common to all display areas operatively connected to said display wheels through said movable contacts to select the information to be displayed and operatively connected to said reversible clutch to initiate the actuation of the group of display wheels selected for rotation in either direction after said first control board has been operated.



2,436,837

FUSE FOR ANTITANK MINES

John B. Traylor, Denver, Colo.

Application October 14, 1943, Serial No. 506,190
11 Claims. (Cl. 102—70)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. A fuse comprising a firing member, a locking member and a plunger member mounted in telescoping relation, said firing member and said plunger member being movably mounted with respect to said locking member, a primer arranged in the path of said firing member, a resilient means operative between said firing member and said plunger member, said locking member having a hole thru a wall thereof, a locking ball mounted in said hole in said locking member, said locking ball projecting in the path of said firing member to hold said firing member out of engagement with said primer, said plunger member having a recess arranged to align horizontally with said hole in said locking member upon movement of said plunger member toward said primer, means for aligning said recess and said hole radially upon movement of said plunger member away from said primer, whereby said recess and said hole may be aligned horizontally and radially upon reciprocation of the plunger member and a cam surface on said firing member contacting said locking ball and operative to cam said ball into said recess of said plunger member, whereby said firing member is freed to strike said primer under force of said resilient means.

2,436,838

STABILIZATION OF TETRAALKYL LEAD AND COMPOSITIONS CONTAINING THE SAME

Harold Von Bramer and Albert C. Ruggles, Kingsport, Tenn., assignors to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey

No Drawing. Application May 10, 1944, Serial No. 534,990
14 Claims. (Cl. 44—69)

1. A hydrocarbon motor fuel which is substantially stable and does not tend to form appreciable gum upon storage containing a tetraalkyl lead compound, a halogenated hydrocarbon lead scavenger and, as a haze retarder, a small amount of an aromatic compound which is a derivative of a p-phenylenediamine in which one hydrogen atom of each amino group is replaced by an alkyl group selected from the group consisting of secondary and tertiary alkyl groups.

2,436,839

HIGH DIELECTRIC COMPOSITION AND METHOD OF MAKING SAME

Eugene Wainer, Niagara Falls, N. Y., assignor to The Titanium Alloy Manufacturing Company, New York, N. Y., a corporation of Maine

No Drawing. Application May 3, 1946, Serial No. 667,110
5 Claims. (Cl. 106—39)

1. A ceramic dielectric comprising essentially barium titanate with a small admixture of magnesium titanate, the mole ratio between barium oxide and magnesium oxide being between about 0.98 mole BaO to 0.02 mole MgO and 0.96 mole BaO to 0.03 mole MgO.

2,436,840

TEMPERATURE STABLE DIELECTRIC AND METHOD OF MAKING SAME

Eugene Wainer, Niagara Falls, N. Y., assignor to The Titanium Alloy Manufacturing Company, New York, N. Y., a corporation of Maine

No Drawing. Application May 16, 1946, Serial No. 670,303
4 Claims. (Cl. 106—39)

1. A ceramic dielectric consisting of a ceramic mixture of magnesium titanate and zinc titanate.

2,436,841

TESTING METHOD FOR POLYSTYRENE

Arthur J. Warner, South Orange, N. J., assignor to Federal Telephone and Radio Corporation, New York, N. Y., a corporation of Delaware

No Drawing. Application March 12, 1945, Serial No. 582,105
2 Claims. (Cl. 260—91)

1. The method comprising dissolving a solid polymer of styrene in propylene oxide and to said solution adding a quantity of methanol to precipitate the polystyrene therefrom, the molecular weight of said polystyrene being about 60,000 to 120,000.

2,436,842

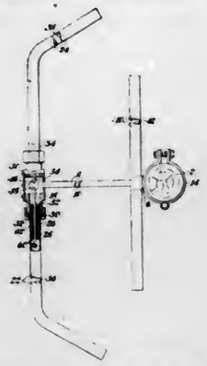
INSULATING MATERIAL CONTAINING CYCLIZED RUBBER, A POLYOLEFINE, AND POLYSTYRENE

Arthur J. Warner, South Orange, and Myron Bakst, Newark, N. J., assignors to Federal Telephone and Radio Corporation, Newark, N. J., a corporation of Delaware

No Drawing. Application October 26, 1942, Serial No. 463,418
4 Claims. (Cl. 260—4)

1. An electric insulating composition, characterized by stability of shape at high operating temperatures of about 75° C., flexibility at low operating temperatures of about —40° C., and good dielectric characteristics at ultra-high frequencies in the range of 100 to 3000 megacycles, that comprises essentially a substantially homogeneous mixture of 5% to 20% of tough, horny, flexible, substantially pure cyclized rubber hydrocarbon having a power factor at 1000 kilocycles of .00019 and a dielectric constant of 3.49, 10% to 30% polyisobutylene having a mean molecular weight of approximately 12,000, 10% to 30% of a polymerized substance having a mean molecular weight within the range of 60,000 to 120,000 chosen from the class consisting of polyethylene and polyisobutylene, and 30% to 55% of a substance having a mean molecular weight of about 80,000 selected from the class consisting of polystyrene, polymerized para methyl styrene, polymerized vinyl naphthalene, and copolymers of styrene with alpha-methyl-para-methyl styrene.

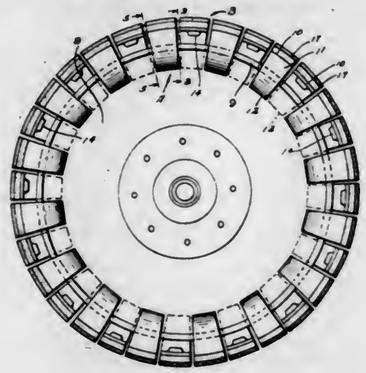
2,436,843



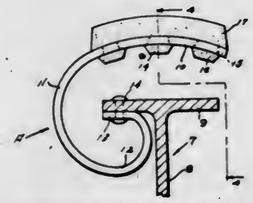
RADIO ANTENNA

Chester B. Watts, Jr., East Orange, N. J., and Leon Himmel, New York, N. Y., assignors to Federal Telephone and Radio Corporation, Newark, N. J., a corporation of Delaware

Application July 9, 1943, Serial No. 494,040
7 Claims. (Cl. (250—11)

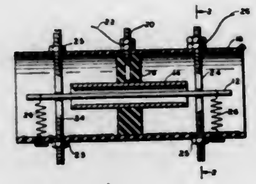


1. A directive antenna structure comprising two bent antenna arms lying in a common plane, the length of each arm being substantially one-half wavelength, each of said arms consisting of a first and a second portion inclined at an angle to each other, the first portion of one arm being



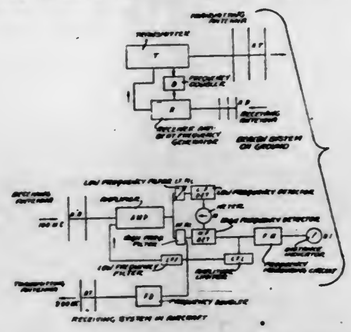
colinear with the first portion of the other arm, a linear reflecting element, the length of said reflecting element being substantially one-half wavelength, said reflecting element being positioned substantially one-quarter wavelength

from said colinear portions in said common plane and on the side of said colinear portions toward which said second portions extend, all of said lengths being in terms of the operating wavelength of said antenna system.



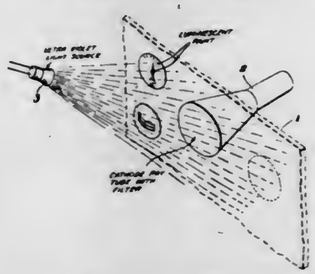
2,436,844
RESILIENT WHEEL
Homer A. Wells, Sacramento, Calif.
Application November 24, 1943, Serial No. 511,589
2 Claims. (Cl. 152—280)

2. In a resilient wheel construction of the class described, a wheel comprising a central hub, a disc-like web portion extending radially from said hub and an annular felly surrounding the outer marginal portion of said web and defining a rim structure which is substantially T-shaped in cross section, and a plurality of adapter springs, each spring being of flat formation, longitudinally bowed between its ends and bent into G-shaped form in marginal edge view and including, at one end, a return bend terminating in a straight attaching tip, the attaching tips of the adjacent pairs of adapter springs being secured to the inner peripheral portions of said felly and in alternate order on opposite sides of the web, the outer free end portions of the respective adapter springs overlying the outer peripheral surface of said felly in radially spaced relation, and resilient pads carried by the outer surfaces of the free end portions of said springs, the respective and adjacent pads being in close spaced relationship and independently operable but assuming collective positions to provide a resilient tread surrounding the entire felly.



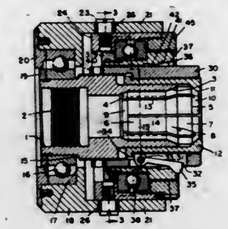
2,436,845
COAXIAL SPARK GAP
Edward M. Wiler, Belmar, N. J., assignor to the United States of America, as represented by the Secretary of War
Application August 17, 1943, Serial No. 498,976
6 Claims. (Cl. 250—38)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

3. A spark gap comprising a metal tube, a metal rod coaxially disposed in said tube, said rod being longer than said tube and projecting therefrom at both ends, an insulation tube substantially larger in diameter than the metal tube surrounding said metal tube, means in said insulation tube receiving and supporting said metal tube, and supports near the ends of the rod beyond the ends of the metal tube, said supports extending between said insulation tube and said rod.



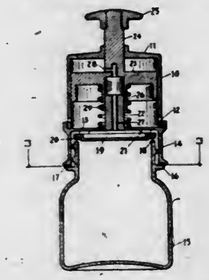
2,436,846
GLIDE PATH SYSTEM FOR AIRCRAFT
Herbert Paul Williams, London, England, assignor to Standard Telephones and Cables Limited, London, England, a British company
Application October 14, 1942, Serial No. 462,023
In Great Britain March 11, 1941
Section 1, Public Law 690, August 8, 1946
Patent expires March 11, 1961
18 Claims. (Cl. 250—1.68)

1. A glide path system for aircraft comprising on the ground a directional antenna system for transmitting a beam of electromagnetic waves, a source of high frequency carrier waves coupled to said antenna system, means for receiving electromagnetic waves radiated from an aircraft under observation in response to the interception of said waves transmitted by said antenna system, means for deriving from said received waves a component dependent upon the instantaneous distance of said aircraft from said directional antenna system, and means for amplitude modulating said waves transmitted from said antenna system in accordance with said component, and comprising on the aircraft receiving means for deriving from said received modulated carrier



waves a component dependent upon said degree of amplitude modulation, and for deriving another component dependent upon the carrier wave energy level, and means for comparing said two last mentioned components to determine a glide path.

2,436,847
CATHODE-RAY TUBE AND VISUAL INDICATING SYSTEM FOR APPARATUS INCLUDING CATHODE-RAY TUBE
Henry Wolfson, London, England, assignor, by mesne assignments, to International Standard Electric Corporation, New York, N. Y., a corporation of Delaware
Application July 29, 1943, Serial No. 496,661
In Great Britain May 10, 1940
Section 1, Public Law 690, August 8, 1946
Patent expires May 10, 1960
1 Claim. (Cl. 250—71)



In combination in a visual indicating system comprising indicators designated by luminous paint, a cathode ray tube, a source of ultraviolet light for rendering such indicators visible in the absence of ordinary light, a light filter effective to pass visible light and to cut off light at and beyond the violet end of the spectrum, said light filter comprising a transparent medium having incorporated therein a dye compound selected from the group consisting of picric acid and sodium picrate and absorbing ultraviolet light and being arranged to shield the fluorescent screen of the cathode ray tube from said source of ultraviolet light.

2,436,848
CHUCK
Milton L. Benjamin, Shaker Heights, and Franklyn E. Winnen, Cleveland, Ohio; said Winnen assignor to said Benjamin
Application December 5, 1945, Serial No. 632,894
7 Claims. (Cl. 279—52)

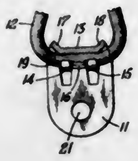
1. In a chuck, the combination of a hollow cylindrical supporting member, a contractible collet reciprocably mounted therein, said member and collet being formed with coacting faces whereby the latter is contracted upon movement thereof inwardly of the former, and means for thus moving said collet, said means comprising a nose-piece surrounding said member and reciprocable longitudinally thereof, an inwardly directed flange on said nose-piece engaging the outer end of said collet, a surrounding casing rotatably connected with said member but held against longitudinal movement relatively thereto, a shell surrounding said nose-piece and supported by said member, lever arms carried by said shell and having operative engagement with said nose-piece, and means supported by said casing whereby said lever arms may be actuated.

2,436,849
DOWNWARD STROKE AIR EVACUATING JAR SEALING APPARATUS
Halton A. Billetter, Youngstown, Ohio
Application December 31, 1943, Serial No. 516,575
5 Claims. (Cl. 226—82)

1. Vacuum sealing apparatus comprising in combination a fluid-tight housing having an annular lower end adapted to be brought into fluid-tight engagement with an annular surface on the upper portion of a jar to be sealed, said housing being adapted to contain a sealing lid for said jar, a cylinder connected to and extending upwardly from said housing, said cylinder having an upper end wall, a piston in said cylinder, a plunger having an upper palm engageable surface slideably mounted in said upper end wall and connected to said piston, and means providing communication between the space

within said housing and the space in said cylinder above said piston whereby upon downward movement of said plunger the air within said housing and jar will be evacuated.

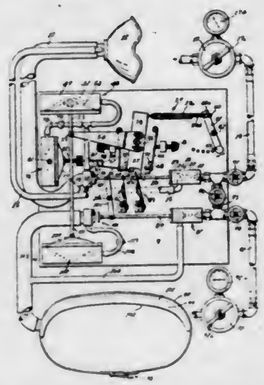
2,436,850
AIR BRAKE SLACK ADJUSTER
Edward Lee Bowen, McComb City, Miss.
Application February 20, 1946, Serial No. 648,995
3 Claims. (Cl. 188—198)



1. In an automatic slack adjuster for air brakes, a compressed air cylinder, a compressed air actuated piston in said cylinder, a floating lever connected to said piston, a brake rod connected to said floating lever, a connecting rod connected to said floating lever, a dead lever connected to said connecting rod and a second brake rod connected to said dead lever, the connection between the connecting rod and the floating lever being by means of a ratchet mechanism controlled by a clutch which operates on said connecting rod, whereby relative movement between said connecting rod and said floating lever may be effected to shorten the operative length of said connecting rod when the piston travel exceeds a predetermined range, said clutch being itself controlled by a third lever which is pivoted at one end to the dead lever and connected at the other end to the compressed air cylinder by means of a chain of predetermined length, said third lever being connected intermediate its ends to the clutch by means of a rod of predetermined length, said lever being also connected intermediate its ends to the dead lever by means of a spring which urges said dead lever and said third lever into registration with each other.

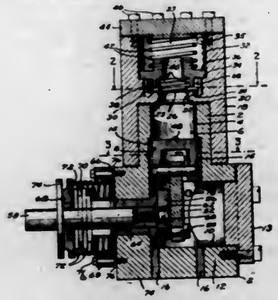
2,436,851
BICYCLIC SULFUR COMPOUNDS AND PROCESS FOR THE MANUFACTURE THEREOF
Albert Businger, Basel, Switzerland, assignor to Hoffmann-La Roche Inc., Nutley, N. J., a corporation of New Jersey
No Drawing. Application April 10, 1944, Serial No. 530,402. In Switzerland May 6, 1943
12 Claims. (Cl. 260—309)

10. 2 - substituted - 3,4 - ureyline-dihydrothiophenes the 2-substituent being a member of the group consisting of —COOH, —CN, —CO alkyl, —CO carboxyalkyl and the lactone thereof.



2,436,852
STAKED TYPE SHUNT CONNECTION FOR CARBON BRUSHES
Robert Carmichael, Lakewood, and Arthur W. Seidler, Cleveland, Ohio, assignors to National Carbon Company, Inc., a corporation of New York
Application September 14, 1945, Serial No. 616,232
4 Claims. (Cl. 171—325)

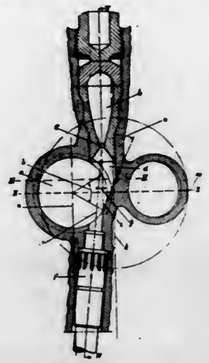
1. In combination with an electric contact brush, an improved shunt connection comprising a V-shaped terminal clip secured thereto, a flexible electrical conductor having a portion thereof disposed between said terminal clip and said brush and lying within a channel formed by the



inner surfaces of the apex of said clip, and crimping means tightly attaching said conductor to said clip, the ends of said channel being bent away from said conductor.

2,436,853
RESPIRATION APPARATUS
Edwin D. Coleman, Maywood, Ill.
Application April 10, 1944, Serial No. 530,257
18 Claims. (Cl. 128—29)

17. The combination in a respiration apparatus of the type having an applicator and a source of gas under pressure, of a conduit for conducting said gas to said applicator, a supply valve for controlling the flow of gas in said conduit to said applicator, an exhaust valve for controlling the flow of gas out of said applicator, means for driving said valves in unison between a first position with the supply valve open and the exhaust valve closed and a second position with the supply valve closed and the exhaust valve open, an operator for actuating said driving means, pressure applying means for urging said operator in one direction to actuate said valves to the first position, pressure responsive means connected to and movable with changes in pressure in said applicator for moving said operator in the opposite direction against the force of said pressure applying means to actuate the valves to the second position, and loading means operating in opposition to the pressure responsive means positioned to be engaged by said operator toward the end of its movement by the pressure responsive means adjustable to preselect the pressure in said applicator at which the pressure responsive means actuates said driving means and thereby operate said valves from the first to the second position at a preselected pressure in the applicator.



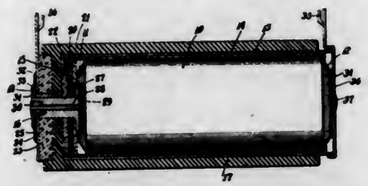
2,436,854
COMPRESSOR
James J. Corey, Jackson Heights, N. Y.
Application May 30, 1945, Serial No. 596,619
5 Claims. (Cl. 230—172)

1. In a high-speed compressor of the type which may be used in a refrigeration system, the combination of, a cylinder block having a cylinder bore with a gas compression chamber at one end and a piston guide portion at the other end, a cylinder head block surrounding the bore in the cylinder block at the end of the gas compression chamber, said cylinder block having a cross-bore at substantially right angles to said cylinder bore and forming a crankcase, a crankshaft mounted coaxially with said cross-bore, a piston and piston rod assembly including a piston mounted in said cylinder bore and a piston rod connecting said piston to said crankshaft whereby rotation of the crankshaft reciprocates said piston in said cylinder bore between a gas inlet position and a gas outlet position, said cylinder block having a plurality of gas inlet passageways formed by a plurality of bores substantially smaller than and parallel to said cylinder bore with their axes coincident with the wall surface of said cylinder bore, said gas inlet passageways extending from said crankcase to the compression chamber which is beyond said piston when said piston is in its gas inlet position, said cylinder head block having a gas outlet bore which is coaxially positioned with respect to said cylinder bore and is surrounded at its end opposite said compression chamber by an annular valve seat, a disc valve adapted to seat on said valve seat and thereby close the gas outlet bore, and a valve retaining assembly mounted in said cylinder head block and resiliently holding said valve disc in seated position.

2,436,855
INTERNAL-COMBUSTION ENGINE
Fred James Culbert, Norfolk, Va.
Application September 1, 1942, Serial No. 456,949
10 Claims. (Cl. 123—32)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

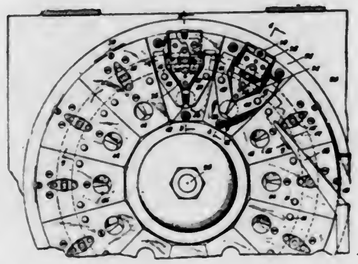
1. An internal combustion engine having an engine cylinder, a cylinder head having a cylindrically shaped main combustion chamber set off to one side of the engine cylinder axis with one end open to the engine cylinders, a flat top piston for displacing all of the compressed air charge into said combustion chamber, a fuel jet injector on one side of said cylinder head having its jet axis substantially parallel to the piston top about midway up the combustion chamber and passing chordally through the inner side of said chamber with respect to the cylinder axis, an auxiliary combustion chamber on the opposite side of the cylinder head from said injector connected by a restricted nozzle passage substantially tangentially to said main combustion chamber, said nozzle having its restriction substantially in line with the fuel jet axis but being directed at a slight angle inwardly of said axis with respect to the cyclinder axis.

2,436,856
ADJUSTABLE HOSE DRIER
George T. Dale, Sea Cliff, N. Y.
Application May 16, 1946, Serial No. 670,203
7 Claims. (Cl. 223—77)



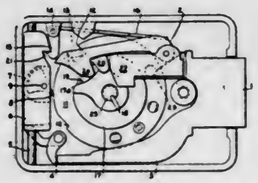
1. In a hose drier of the class described, a frame conforming generally in shape and size to a given type of hose, a central brace located between the outer members of said frame, a heel portion slidably mounted on the frame, said heel portion having a pair of arms extending to and slidably engaging with said central brace and a locking device carried by one of said arms and engaging with said central brace for securing said heel portion positively at a predetermined position on said frame.

2,436,857
CONTAINER AND TERMINAL FOR ELECTRICAL DEVICES
William Dubilier, New Rochelle, N. Y., assignor to Cornell-Dubilier Electric Corporation, South Plainfield, N. J., a corporation of Delaware
Application June 22, 1943, Serial No. 491,783
1 Claim. (Cl. 174—77)



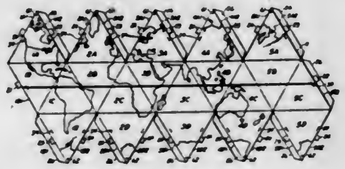
The combination with a high tension electrical device, of a leak-proof housing comprising a rela-

tively thin cylindrical metal container enclosing said device and forming a terminal of one polarity for said device, said container having an end wall provided with a central opening, a relatively heavy cup-shaped insulating member having an end wall provided with a central opening of substantially smaller diameter than said first opening, said metal container being disposed in said insulating member in snug fitting engagement of both the cylindrical and end wall portions of said container and member, a rivet terminal of opposite polarity having an inner flange in electrical connection with said device and having a shank portion passing through said



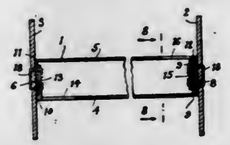
openings, first washer means encircling said shank portion between said flange and the end wall of said container, said washer means comprising a central portion of relatively rigid insulating material and outer portions of relatively flexible insulating material, further insulating washer means encircling said shank portion and engaging the outside of said member, said first and second washer means being clamped by said rivet into engagement with said openings to provide a hermetic seal for said terminal, said insulating member extending over a substantial length of said container towards the opposite end thereof.

2,436,858
NUT-ASSEMBLING MACHINE
Karl Eisele, Belleville, N. J., assignor to Camloc Fastener Corporation, New York, N. Y., a corporation of New York
Application November 18, 1943, Serial No. 510,756
15 Claims. (Cl. 10—86)



15. An apparatus of the class described including, in combination, a dial plate formed with a recess to receive a shell, staking means carried by said dial and cooperable with said shell, means for rotatably supporting said dial, said shell and dial being adapted to receive a washer upon subsequent rotation of said dial, said shell and washer being adapted to receive and support a nut upon a still further rotation of said dial occurring, means forming a part of said apparatus for tamping said nut and washer into predetermined positions with respect to each other and with said shell, means for thereupon staking said shell into locking engagement with said nut, means for maintaining the established positions of said shell, nut and washer during the staking thereof, and means for thereupon expelling said shell, nut and washer from said dial recess.

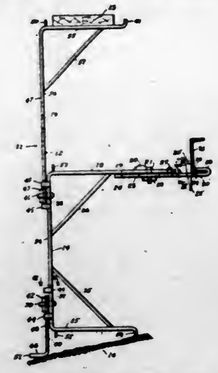
2,436,859
COMBINATION LOCK WITH ROTATING TUMBLER DISCS
Vincent Joseph Marie Eras, Dordrecht, Netherlands, assignor to Lips' Brandkasten-en Slotenfabrieken N. V., Dordrecht, Netherlands
Application September 28, 1945, Serial No. 619,062
In the Netherlands November 17, 1942
Section 1, Public Law 690, August 8, 1946
Patent expires November 17, 1962
5 Claims. (Cl. 70—314)



1. In a combination lock including a bolt and rotatable locking discs mounted on a shaft, means for embroiling the discs comprising a weight mounted adjacent the discs, a guiding means for the weight arranged to restrict it to an up-and-down movement adjacent the periphery of the discs, means actuated by the bolt upon its movement to open position for raising the weight to an elevated position in the lock, a catch for holding the weight in its elevated position, means on the weight for engaging the periphery of the discs to rotate them when the weight falls, and means actuated by the bolt upon its movement to closed position for releasing said catch and permitting the weight to fall, whereby the falling of said weight rotates the discs and thoroughly embroils them.

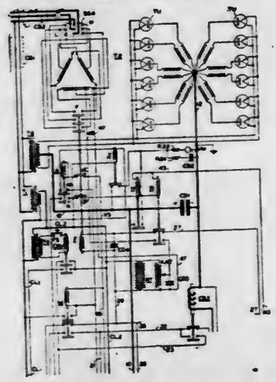
2,436,860
GLOBAL MAP
Irving Fisher, New Haven, Conn.
Application February 19, 1945, Serial No. 579,590
7 Claims. (Cl. 35—40)

1. In a global map: twenty flat equilateral-triangle sheet sections joined along straight separation edges into a continuous generally-flat sheet structure which is foldable along their separation edges into a polyhedron structure of generally global shape; the outer face of each section having thereon a component map part corresponding to one-twentieth part of a generally spherical map of the earth, and adjacent sections representing adjacent map parts of the earth; ten of said sections forming adjoining parts of an elongated continuous strip having parallel opposite sides, and the ten other sections being formed of two sets of five sections extending from the opposite sides of said strip and each side of the strip being formed of five linearly aligned separation edges of its sections; the border edges of said sheet structure being formed of twelve pairs of straight conjugate border edges of conjugate sheet regions which are brought into abutment when said sheet structure is folded into global shape; each conjugate border edge having a tab extending from and bendable along the border edge of the conjugate sheet region so that when a pair of conjugate border edges are brought into abutment their tabs will overlap and form a bendable double tab extending outwardly from the abutting conjugate border edges so that the double tab may be gripped from the exterior side of the polyhedron structure while fastening the conjugate sheet regions thereof in their abutting relation; and releasable fastening elements associated with each pair of conjugate sheet regions for fastening them in their abutting relation.

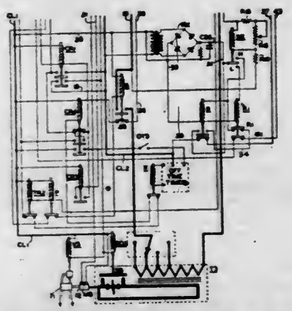


2,436,861
REEL
Hyman Greisman, New York, N. Y., assignor to Monroe Paper Box Co. Inc., New York, N. Y., a corporation of New York
Application January 29, 1947, Serial No. 724,985
4 Claims. (Cl. 242—119)

3. In a collapsible reel of the character described, a pair of reel flanges consisting of cardboard strips, a collapsible box structure fastened between said flanges and constituting the hub of the reel structure, said box including face panels formed with integral tongues located adjacent to the sides of the box structure and partially separated from said panels whereby said tongues will remain in the planes of the panels while the box is in its collapsed condition, and staple fasteners penetrating the strips, the sides of the box and the tongues and causing the tongues to be folded inside of the box when the box is set up.



2,436,862
ADJUSTABLE SCAFFOLD OR STAGING
Franklin J. Hiers, Portsmouth, Va., assignor of one-fourth to Thomas A. Hodges, Portsmouth, Va.
Application May 22, 1946, Serial No. 671,430
9 Claims. (Cl. 304—10)



1. A main member adapted for use in an adjustable scaffold, comprising a normally generally-horizontal portion adapted to either rest on the ground or, upon inversion, form an upper plank-supporting portion, another normally generally-horizontal portion apertured for the reception of a connecting bolt, and a normally upright portion connecting said generally-horizontal portions, from which they both extend in the same direction and in non-adjustable relationship, and

apertured near both ends for the reception of bolts for connection with auxiliary members.

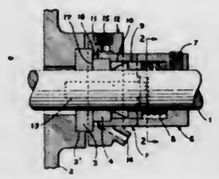
2,436,863
WELDING APPARATUS
Stanley M. Humphrey, Warren, Ohio, assignor to Taylor-Winfield Corporation, Warren, Ohio, a corporation of Ohio
Application February 15, 1941, Serial No. 379,084
14 Claims. (Cl. 219—4)

1. A welding system comprising a capacitor, a welding circuit adapted to be energized by said capacitor comprising a pair of welding electrodes,

means to discharge said capacitor through said circuit, means to move said electrodes apart upon completion of a welding cycle, and means to short said electrodes upon actuation of said means to move said electrodes apart.

2,436,864
DEHYDRATION PROCESS
Robert Johnson, Verona, Pa., assignor to Koppers Company, Inc., Pittsburgh, Pa., a corporation of Delaware
No Drawing. Application March 23, 1946, Serial No. 656,783
9 Claims. (Cl. 260—668)

1. A process for the synthesis of 1,2-dihydronaphthalene from solutions containing alpha tetralol comprising: passing vaporized alpha-tetralol-containing mixtures over an alumina-bearing catalyst at a temperature between about 290° and 350° C.



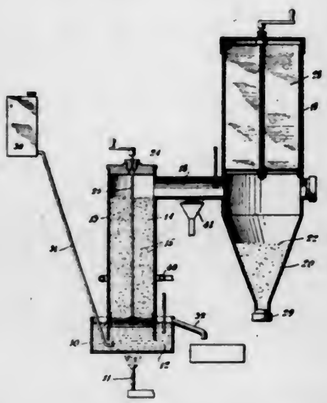
2,436,865
DERIVATIVES OF 3-OXO-4-HYDROXY-THIOPHAN AND PROCESS FOR THE MANUFACTURE THEREOF
Paul Karrer, Zurich, Switzerland, assignor to Hoffmann-La Roche Inc., Nutley, N. J., a corporation of New Jersey
No Drawing. Application August 26, 1944, Serial No. 551,443. In Switzerland July 2, 1943
Section 1, Public Law 690, August 8, 1946
Patent expires July 2, 1963
8 Claims. (Cl. 260—329)

7. 3-oxo-4-hydroxy-thiophan substituted in position 2 by a radical of the formula

$$-(CH_2)_n-R$$

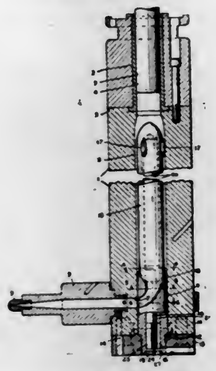
wherein n is a numeral from 1 to 4, and R is selected from the group consisting of OH, O-alkyl, CN, COOH, and functional derivatives of COOH.

2,436,866
MECHANICAL SEAL
John E. Lancaster, New York, N. Y., assignor to Worthington Pump and Machinery Corporation, Harrison, N. J., a corporation of Delaware
Application October 23, 1946, Serial No. 705,033
3 Claims. (Cl. 286—9)



1. In a mechanical seal for a shaft rotating in a fluid containing vessel, a first sealing member, a second sealing member, deformable packing members comprising wedge shaped rings having their wedge faces interacting, a compression member, a spring member, a back-up member for said spring member, means for fixing said back-up member to the shaft for motion therewith, each of said members being of annular form with shaft receiving openings and arranged in series relationship, a collar member, said second sealing member being attached to said collar member for movement therewith, means for transmitting rotary motion from the back-up member to the collar member and the second sealing member, said last mentioned means being constructed and arranged to permit axial movement of said collar relative to the shaft and back-up member, a clamp member for fixing said first sealing member to the vessel, said clamp member fitting about said collar member and having an internal annular groove with an outlet therefrom for draining off fluid leaking through the interacting faces of said first and second sealing members.

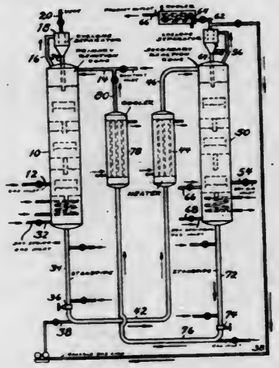
2,436,867
WELDING ROD
Richard K. Lee, York, Pa., assignor to The McKay Company, York, Pa., a corporation of Pennsylvania
No Drawing. Application January 21, 1946, Serial No. 642,445
4 Claims. (Cl. 219—8)



1. A welding rod comprising a core wire and a coating thereon, the core wire and coating being of such composition as to deposit at the weld locus a weld metal comprising carbon from 0.55 to 0.90%, silicon from 0.10 to 1.0%, nickel from 6 to 12%, chromium from 16.5 to 22%, and manganese from 1.5 to 5.0, the balance being substantially all iron except for the impurities usually found in commercial steels and the weld metal being at least in part austenitic and rapidly work hardenable.

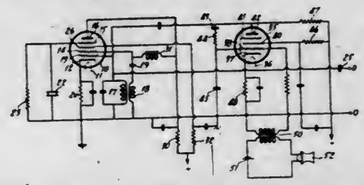
2,436,868
RECOVERING TIN FROM STANNIC CHLORIDE
Yurii E. Lebedeff, Metuchen, N. J., assignor to American Smelting and Refining Company, New York, N. Y., a corporation of New Jersey
Application December 13, 1945, Serial No. 634,747
5 Claims. (Cl. 75—85)

1. The process for recovering tin from stannic chloride which comprises establishing a molten bath of tin, introducing anhydrous liquid stannic chloride into contact with the molten bath of tin to produce gaseous tin chloride, reacting said gaseous tin chloride with pieces of aluminum in solid state to effect reduction of the tin chloride to tin metal with the formation of aluminum chloride, and collecting the tin resulting from the reduction reaction in said molten bath of tin.



2,436,869
INJECTION MOLDING MACHINE SPREADER
Nathan Lester, Shaker Heights, Ohio, assignor to Lester Engineering Company, Cleveland, Ohio, a corporation of Ohio
Application March 29, 1945, Serial No. 585,458
4 Claims. (Cl. 18—30)

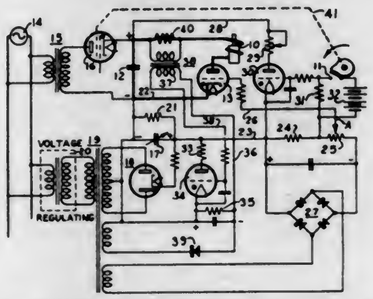
1. The combination with the injection cylinder of a pressure molding machine, such cylinder having a lateral discharge opening adjacent one end thereof, of a spreader comprising a head closely fitted within such cylinder end and extending to a point beyond such opening and a shank of smaller diameter than the bore of said cylinder projecting from said head into the latter, said head being formed with a channel leading from the space between said shank and cylinder bore to such discharge opening, an electrical heating unit housed within the shank portion of said spreader, a thermostatic switch for controlling said unit housed within the head portion of said spreader, a block of insulating material interposed between said switch and the adjacent end of said heating unit and formed with a groove longitudinally thereof, a filler block formed with a groove in which said thermostat is disposed and another groove in alignment with the groove in said block of insulating material, and a second block of insulating material interposed between the head end of said spreader and the switch and formed with two grooves in alignment with those of said filler block, such aligned grooves in said blocks providing for passage of leads from the head end of said spreader to said heating unit and to said switch respectively.



2,436,870
PREPARATION OF CHLORINE
Eger V. Murphree, Summit, N. J., assignor to Standard Oil Development Company, a corporation of Delaware
Application October 31, 1942, Serial No. 463,999
5 Claims. (Cl. 23—219)

1. In a process for producing chlorine by reacting hydrogen chloride with a metal oxide and reacting the metal chloride so formed with an oxygen-containing gas to release chlorine and reform the metal oxide, the steps of passing the metal oxide in fluidized condition downwardly through a first reaction zone in a plurality of stages, wherein it is reacted with countercurrent hydrogen chloride vapor to form the metal chloride and steam is evolved at the upper end of each stage, introducing a dry stripping gas into the lower portion of said first zone to strip the steam from said metal chloride, passing the fluidized metal chloride from a lower part of said first reaction zone to an upper part of a second reaction zone, passing said fluidized metal chloride downwardly through said second reaction zone in a plurality of stages, reacting said metal chloride with countercurrent oxygen-containing gas in each of said stages to reform the metal oxide and evolve chlorine, withdrawing resulting chlo-

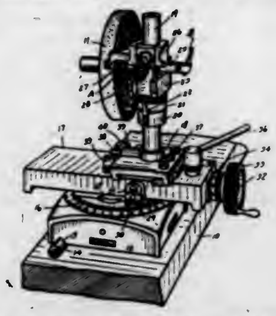
rine-containing gases from the upper part of said second reaction zone, withdrawing reconverted dispersed metal oxide from a lower part of said second reaction zone, returning said metal oxide in dispersed condition to an upper part of said first reaction zone, and recycling a portion of the withdrawn chlorine-containing gases for admixing with the metal chloride from said first reaction zone, to increase dispersion and assist flow thereof into said second reaction zone.



2,436,871
CENTER FREQUENCY STABILIZED FREQUENCY MODULATED OSCILLATOR
Karl Rath, New York, N. Y., assignor to Radio Patents Corporation, New York, N. Y., a corporation of New York
Application February 24, 1944, Serial No. 523,633
4 Claims. (Cl. 179—171.5)

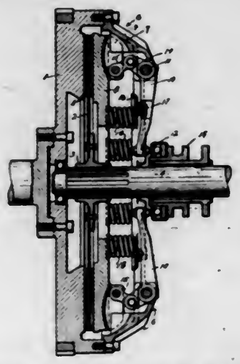
1. An oscillator comprising an electron discharge tube having a cathode, a first control grid, a screen grid, a second control grid and an anode, all arranged substantially in the order named, a regenerative oscillating circuit comprising a resonant tank circuit connected between said first grid and said cathode and feedback coupling means therebetween and said screen grid to generate sustained electrical oscillations having a frequency determined by the resonant frequency of said tank circuit, a piezo-electric crystal shunted by a high impedance pervious to direct current and connected between said second control grid and said cathode, said second control grid having a steady bias to produce a concen-

trated electron space charge adjacent thereto and fluctuating at oscillating frequency, whereby to cause the steady electron current to vary in sense and magnitude in proportion to relative frequency departure between the generated oscillations and the resonant frequency of said crystal, a load resistance connected to said anode, means for applying varying operating potential to said screen grid from said load resistance to thereby control the reactance reflected upon said tank circuit and to vary the oscillating frequency to counteract initial deviations thereof from the crystal frequency, means to modulate the frequency of the generated oscillations in accordance with a modulating signal amplitude, and means in the screen grid circuit to prevent anode current variations in accordance with the modulating signal frequency from affecting the steady potential of said screen grid.



2,436,872
TIMING CIRCUITS
Clyde E. Smith, Warren, Ohio, assignor to The Taylor-Winfield Corporation, Warren, Ohio, a corporation of Ohio
Application May 19, 1944, Serial No. 536,339
13 Claims. (Cl. 320—1)

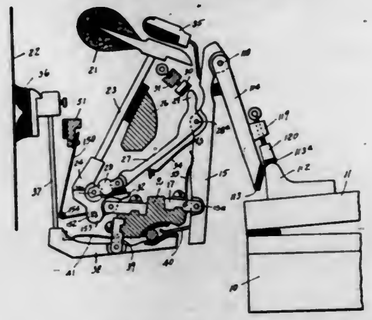
1. Electrical timing apparatus comprising in combination a capacitance, means to normally maintain a predetermined voltage on said capacitance, a timing circuit operative to change the potential on said capacitance to a second predetermined voltage in a predetermined interval of time, means to initiate operation of said timing circuit, a control circuit adapted to be actuated upon said capacitance reaching said second predetermined voltage, and means operative substantially simultaneously with actuation of said control circuit to change the charge on said capacitance to approximately said first mentioned predetermined voltage.



2,436,873
RADIUS-ANGLE FORMER
Ingolf Sneva, Bedford, Ind., assignor to W. F. Meyers Company, Bedford, Ind., a corporation
Application December 11, 1943, Serial No. 513,896
3 Claims. (Cl. 51—224)

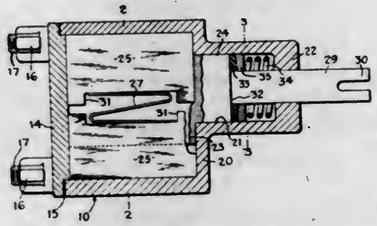
2. In a tool forming apparatus, the combination with a grinder table and a wheel provided with a grinding edge, of a swivel support secured to said table in axial alignment with the center of curvature to be ground by said wheel, an elongated slide adjustably supported to slide diametrically of said support toward and away from said wheel, a transverse slide adjustably associated with said elongated slide, a fixture post extending upwardly from said transverse slide, a height setting collar slidably adjustable on said post, an adjustable collar rotatable on said setting collar to variable height adjustment with respect thereto, and a tool fixture mounted on

said post for height adjustment thereon by supporting engagement with said adjustable collar, whereby the elevation of said tool holder may be positioned and set by said collars relative to the horizontal plane through the axis of said wheel.



2,436,874
FRICTION CLUTCH
Charles B. Spase, Nedrow, N. Y., assignor to Lipe-Rollway Corporation, Syracuse, N. Y., a corporation of New York
Application October 12, 1944, Serial No. 558,332
7 Claims. (Cl. 192—68)

1. In a clutch, the combination of driving and driven members, a pressure ring rotatable with the driving member, a back plate detachably secured to the driving member, clutch mechanism including multiplying and reversing levers pivoted to the back plate and connected to the pressure ring, said levers having inwardly extending radial arms, an annular abutment thrusting against the inwardly extending radial arms tending to move said arms rearwardly about the pivots of the levers, an annular series of springs interposed between the pressure ring and the abutment and a throw-out collar thrusting during declutching operation on the inner arms of the levers in a direction opposite to the direction of the thrust of the spring against the abutment, the springs being located on opposite sides of the levers and the abutment thrusting against the levers between the springs, and means for clamping the abutment to the pressure ring to hold the



springs from reaction against the levers, whereby the back plate, pressure ring, springs and levers are removable from the driving member and replaceable as a unit.

2,436,875
PIANO ACTION
Francis C. Socin, Batavia, Ill., assignor to The Rudolph Wurlitzer Company, Chicago, Ill., a corporation
Application March 23, 1945, Serial No. 584,353
5 Claims. (Cl. 84—240)

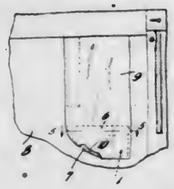
1. A piano action including a piano key, a hammer positioned to strike the piano string, a supporting frame, a wippen pivotally mounted at one end upon said frame below said key to extend substantially vertically with respect to and terminating above said key, a striking member associated with the upper end of said wippen engageable by the striking end of said key to swing said wippen forwardly toward the string, a hammer butt pivotally supported by said frame carrying said hammer on one end thereof, a jack pivotally connected with said wippen intermediate its ends and extending downwardly and forwardly toward the string into operative engagement with said hammer butt for transmitting the striking action of said key therethrough to said hammer, and a spring anchored to said frame extending upwardly into engagement with said wippen intermediate its ends tending to return it to rest position after being actuated.

2,436,876
ROTARY SLIDING VANE PUMP STRUCTURE
Alfred L. Stamsvik, Pittsburgh, Pa.
Application July 29, 1943, Serial No. 496,528
4 Claims. (Cl. 103—137)

1. A pump comprising a housing in which is a cylindrical chamber, said housing including a removable cover closing the front end of the chamber, the walls of the chamber being straight and free of depressed regions so that the cover forms the entire front wall of the chamber, a rotary pump element in the chamber, a rearwardly extending hub on said pump element, a drive shaft connected with the hub of the pump element and coaxial with, but of smaller diameter than the hub so that there is a shoulder at the end of the shaft, an inside cylindrical bearing surface for said hub on a wall of the housing, an annular sealing ring beyond said hub and in sealing contact with both the outside surface of the shaft and said cylindrical bearing surface, and a spring urging the sealing ring against the shoulder, said pump element, drive shaft, sealing ring and spring being removable through the front of the housing when the cover is removed.

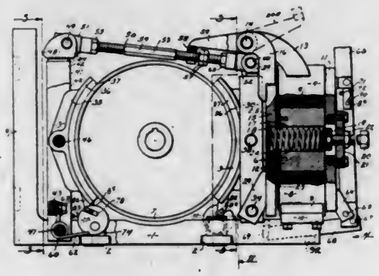
2,436,877
INHALER
Joseph B. Biederman, Cincinnati, Ohio
Application October 6, 1943, Serial No. 505,090
1 Claim. (Cl. 128—200)

In an inhaler container a cylindrical body member having its lower end open to permit insertion of medicine, a cup like bottom member for closing the open end of the body member and having a flat bottom and an upwardly projecting relatively short flange exteriorally of and receiving the lower end portion of the body member, said bottom member flange and body member end portion within said flange being rotatable relative to one another, each having apertures adapted to be brought into more or less registry upon relative rotation to regulate the amount of air admitted to the body member, said body member enclosing medicine adapted to be picked up by the air, a top member on said body member provided with an aperture through which the medicine laden air passes, said top member having a flange for enclosing the upper end of the body member, an apertured plate carried by the top member flange, and a second apertured plate carried by the body member, said plates being rotatable relative to one another for bringing the apertures into more or less registry to regulate the amount of medicine laden air drawn through the apertured top member.



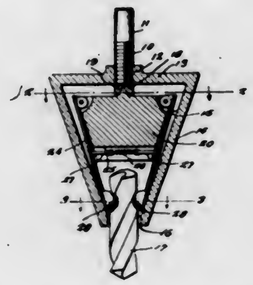
2,436,878
INHALER
Joseph B. Biederman, Cincinnati, Ohio
Application March 2, 1945, Serial No. 580,629
6 Claims. (Cl. 128—198)

1. In a device of the class described the combination of a body member having an exit open-



ing in its top and an entrance opening near its bottom, said body member being hollow, a combined medicine stick carrier and closure member within the body member comprising a pair of opposed arms and a top conforming to the interior of the body member and reciprocable relative thereto and having portions adapted to cover the exit and entrance openings when at one end of its reciprocation and uncover said openings when at the other end of its reciprocation, and a finger piece projecting from the closure member for actuating the said closure member.

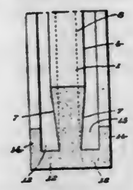
2,436,879
REPAIR PATCH FOR GARMENT POCKETS
Leo F. Buck, Camden, N. J.
Application April 12, 1946, Serial No. 661,806
6 Claims. (Cl. 2—243)



1. A repair patch for worn or damaged garment pockets, comprising a pocket-like member corresponding substantially in size and configuration to the lowermost portion only of the pocket to be repaired, and an adhesive adapted to lie between the outer surface of said patch and the inner surface of said lowermost portion of the pocket to which the patch is applied to retain said patch in position within said lowermost portion when said patch is applied thereto.

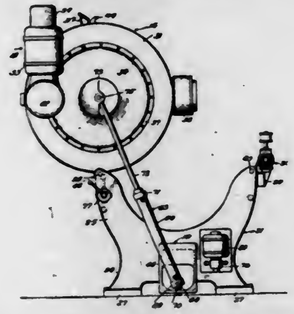
2,436,880
ELECTROMAGNETIC BRAKE MECHANISM
Lynn S. Burgett, Euclid, Ohio, assignor to The Clark Controller Company, Cleveland, Ohio, a corporation of Ohio
Application June 28, 1943, Serial No. 492,512
14 Claims. (Cl. 188—171)

11. In a brake of the type comprising brake shoes disposable on opposite sides of a brake drum and movable toward the drum to engage it to set the brake and movable away from the drum to clear it to release the brake; a frame; supports for the shoes; means interconnecting the shoe supports; mutually engageable stop elements, one on the interconnecting means and one supported by the frame; engaged when the brake is released and spaced apart when the brake is set; the spaced distance of the separated stop elements being proportional to the clearance between the brake shoes and the drum when the brake is released and increasing as the brake shoes wear; the said stop elements being disposed so that the said spaced distance is readily observable and indicates at all times the shoe-and-drum clearance and the state of wear of the shoes; and means to adjust the length of the interconnecting means effective to adjust the shoe-and-drum clearance to take up for wear.



2,436,881
DRILL CHUCK
Joseph Donahue, Shamokin, Pa.
Application November 16, 1945, Serial No. 629,030
1 Claim. (Cl. 279—39)

A drill supporting chuck comprising a hollow conical shaped outer member closed at its large end and open at its small end, said closed end being formed with a threaded centrally disposed opening, a threaded shank adjustably disposed in said threaded opening, a solid frusto-conical member supported by said shank disposed in said hollow outer member for movement lengthwise thereof, said solid frusto-conical member being formed with oppositely disposed bearing slots in its upper end, pivot pins extending transversely of said slots, arcuate depending clamping arms having spaced apertured ears on their upper ends pivotally supported upon said pivot pins and having inwardly extending locking protuberances on their lower ends adapted to engage in the flutes or channels of a drill when inserted within the open end of said outer member, said inner member being formed with a transverse channel in its lower end, inwardly extending arms secured to said clamping arms disposed in said transverse channel, and a coil spring secured between the inner ends of said inwardly extending arms for resiliently urging said clamping arms and protuberances inwardly to positively lock and support a drill when inserted in a chuck.



2,436,882
DOUBLE REVERSIBLE FILM DEVELOPING HANGER
Edward S. Edelhart, Lima, Ohio, assignor of one-half to Harry R. Meredith, Allen County, Ohio
Application June 1, 1945, Serial No. 597,069
3 Claims. (Cl. 95—100)

1. A one piece hanger for photographic films, comprising parallel and spaced top and bottom bars, parallel and spaced side bars extending at right angles to and rigidly secured to the top and bottom bars to form a substantially rectangular frame portion, the side faces of the side and bottom bars being tapered toward their respective outer edges, the ends and the intermediate portions of the side and bottom bars having cut-out portions, said cut-out portions extending from the outer edges of the side and bottom bars, whereby a plurality of tongue portions are formed on the side and bottom bars, side and bottom

flanges extending spaced from and parallel to the side and bottom bars, respectively, on each side thereof, web portions securing said flanges to said tongues whereby a film supporting pocket is formed between each said tongue and adjacent side flanges and a rectangular circulation recess is formed by each cut-out portion and adjacent flanges, and a head on the frame formed with attaching openings.

2,436,883
WASHING MACHINE WITH PIVOTALLY SUPPORTED OUTER AND INNER SHELLS AND POWER MEANS ON THE OUTER SHELL FOR ROTATING THE INNER SHELL
Hubert C. Ellis, Evanston, Ill., assignor to The Ellis Drier Co., Chicago, Ill., a corporation of Illinois
Application November 27, 1944, Serial No. 565,234
14 Claims. (Cl. 68—140)

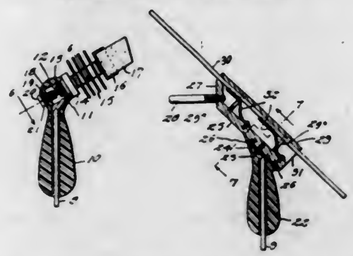
1. A washing machine of the character described, comprising a supporting structure, an outer shell having an access opening therein and provided with means whereby it is mounted on the supporting structure so that it is capable of being moved bodily back and forth between a normal operating position wherein the access opening faces upwards and a discharging position wherein the access opening faces downwards, an inner shell within the outer shell provided with a door closed access opening, adapted to hold the articles to be washed and supported so that it is rotatable relatively to the outer shell, and power mechanism for rotating the inner shell, mounted entirely on, and movable bodily with, said outer shell.

2,436,884
COATED WELDING ROD
Johann Diedrich Fast, Eindhoven, Netherlands, assignor to Hartford National Bank and Trust Company, Hartford, Conn., as trustee
No Drawing. Application January 29, 1943, Serial No. 474,002. In the Netherlands March 15, 1941
Section 1, Public Law 690, August 8, 1946
Patent expires March 15, 1961
7 Claims. (Cl. 219—8)

1. A welding electrode for electric arc welding comprising a core consisting of at least about 50 per cent of iron, a slag-forming coating on said core, a reducing agent in said coating consisting of a sufficient percentage of material other than magnesium to prevent oxidation of the iron metal during welding, and an arc preserving agent consisting of at least about 90 per cent of magnesium incorporated in the coated electrode, for preventing extinction of the arc during welding.

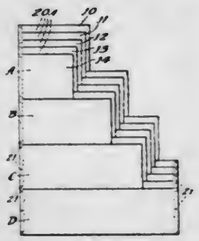
2,436,885
DIELECTRIC COMPOSITION COMPRISING POLYCHLOROPRENE, WAX, AGE RESISTOR, AND ANTIOXIDANT
Louis P. Gould and John W. Whiteside, Dayton, Ohio, assignors to General Motors Corporation, Detroit, Mich., a corporation of Delaware
No Drawing. Application January 29, 1944, Serial No. 520,318
4 Claims. (Cl. 260—28)

4. A resilient corona resistant dielectric compound for use in connection with high tension cables, comprising in combination, polymerized chloroprene 100 parts, polymerized trimethyl dihydroquinoline 2½ parts, diphenyl ethylene diamine 2½ parts, and a wax selected from the methane series and having at least 24 carbon atoms per molecule 10 parts.



2,436,886
SOUND-PRODUCING TOY
John Pinkney Gowland, Woking, England
Application November 7, 1945, Serial No. 627,131
In Great Britain November 6, 1944
2 Claims. (Cl. 46—99)

1. A toy comprising a base board fitted with running wheels and having an aperture therein, a pair of spaced bearing brackets fixed to said base and upstanding from the upper side thereof adjacent said aperture, a disc overlying and protruding into said aperture and disposed between said brackets and rotatably supported thereby, said disc having a slot therein, a sound-producing device of concertina type including a weighted bellows located in said slot and secured to said disc so as to be repeatedly inverted as said disc rotates thus causing the bellows alternately to expand and collapse and thereby periodically emit sound, a pair of spaced bearing brackets secured to said base and depending from the underside thereof adjacent said aperture, drive gear between and supported by said depending brackets in driving connection with the portion of said disc protruding through said aperture for rotating the same, said drive gear including a wheel member

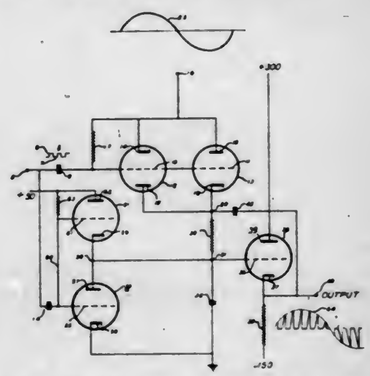


for engaging the running surface on which said wheels of the toy rest, and a hollow simulacrum mounted on the upper side of said base and enclosing said upstanding brackets, disc and sound-producing device.

2,436,887
ELECTRICAL SOLDERING DEVICE WITH ATTACHMENT
Urban N. Hensley, Reno, Ill., assignor of forty per cent to Lloyd Alexander, Greenville, and eight per cent to Marvin M. Hensley, Reno, Ill.
Application December 27, 1944, Serial No. 569,940
3 Claims. (Cl. 219—26)

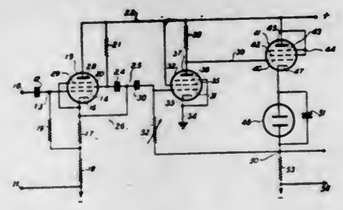
1. In a soldering assembly a power unit, a pair of soldering electrodes connectable to the power unit, both having hollowed handles for the end of the means connecting them to the unit, one of the electrodes having a stud bolt extending through the handle the stud of which carries cooling fins, a clamp and carbon in the clamp, the other electrode comprising a bronze or copper strip mounted to the handle and connected to the connecting means, a cover secured to the strip with apertures for a soldering rod, a heating unit carried by the handle of the second electrode.

2,436,888
PROCESS FOR MAKING UNIT STRIPS
Arthur L. Hess, Milford, and Howard G. Denyven, Cincinnati, Ohio, assignors to Ditto, Incorporated, Chicago, Ill., a corporation of West Virginia
Application December 29, 1945, Serial No. 638,171
7 Claims. (Cl. 281—16)



3. The method of manufacturing unit strip assemblies from a plurality of sheets comprising the steps of slitting the central portion of each sheet along correspondingly spaced transverse lines to provide a plurality of strips which are connected to each other at their side marginal portions, arranging said sheets with their transverse edges in overlapping relationship and with their longitudinally extending edges aligned with each other, securing said marginal portions of said sheets to each other to form a sheet assembly, and separating said sheet assembly into a plurality of unit strip assemblies by tearing said marginal portions at points opposite the slits.

2,436,889
PROTECTIVE APPARATUS FOR PREVENTING ACCUMULATION OF ICE ON AIRFOILS
Eugene E. Heston, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a corporation of New York
Application June 9, 1944, Serial No. 539,442
13 Claims. (Cl. 244—134)

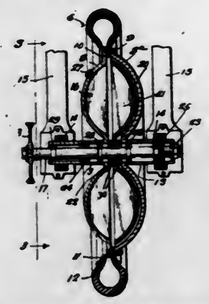


6. Apparatus for preventing the accumulation of ice on a surface, said apparatus comprising a covering of resilient rubber-like material having a multiplicity of inflatable tubular passages therein each not exceeding three-quarters of an inch in diameter, providing under inflation thereof a multiplicity of sharply curved ridges at the surface of said covering as a result of the small cross-section of the passages for breaking the adhesive bond of an overlying ice-deposit, adjacent passages being disposed with their margins directly alongside one another in close parallel relation for effecting the surface action of said sharply curved ridges substantially completely over the group area of said passages.

2,436,890
MODULATED SAW-TOOTH SWEEP GENERATOR
William A. Higinbotham, Santa Fe, N. Mex., assignor, by mesne assignments, to the United States of America, as represented by the Secretary of War
Application January 24, 1945, Serial No. 574,375
2 Claims. (Cl. 179—171.5)

1. In a voltage generator of the character described having associated therewith a source of charging voltage of variable magnitude and polarity, a sweep capacitance, a limiting resistance through which said sweep capacitance is charged, said limiting resistance being sufficiently high to prevent instantaneous charging of the sweep capacitance, said sweep capacitance and limiting resistance being series-connected, a storage capacitance, a charging circuit for said storage capacitance, said charging circuit having applied thereto said charging voltage, said storage capacitance constituting a source of charging voltage for said sweep capacitance, a discharging circuit for said sweep capacitance, and switch means causing both of said charging and discharging circuits alternately to be closed to communicate said charging voltage to said storage capacitance and to discharge said sweep capacitance, and to be opened to permit charging of said sweep capacitance by said storage capacitance, thus to develop a saw-tooth voltage output whose envelope is similar to the wave form of said charging voltage.

2,436,891
ELECTRONIC SYSTEM FOR DIFFERENTIATING VOLTAGE WAVE FORMS
William A. Higinbotham, Santa Fe, N. Mex., assignor, by mesne assignments, to the United States of America, as represented by the Secretary of War
Application February 19, 1945, Serial No. 578,768
3 Claims. (Cl. 250—27)

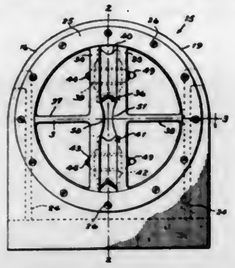


1. An electronic circuit for obtaining from a given input voltage an output voltage substantially proportional to a mathematical derivative with respect to time of said input voltage, comprising an isolating circuit, means for applying said input voltage to said isolating circuit, a differentiating capacitor and a differentiating resistor serially connected, means for impressing the output of said isolating circuit onto said resistor and capacitor, a cathode follower circuit, means for applying the output of said cathode follower in series with said differentiating resistor, an amplifying and inverting circuit, means for impressing said output of said cathode follower and voltages appearing across said differentiating resistor onto said amplifying and inverting circuit, and means for impressing the output of said amplifier and inverter onto the input of said cathode follower.

2,436,892
METHOD AND APPARATUS FOR ALIGNING MACHINERY
Ralph W. Hunter, Jacksonville, Fla.
Application January 25, 1944, Serial No. 519,667
5 Claims. (Cl. 88—14)

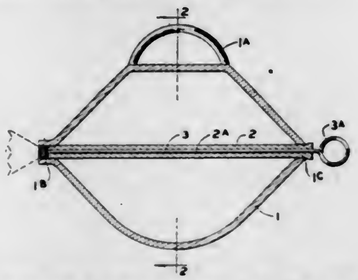
1. The method of axially aligning a shaft with a distant fixed reference point which comprises attaching a reflector at one end of the shaft, directing a beam of light from the reference point to the reflector, receiving the reflected image of said beam on a circular target having its center coincident with the reference point and having concentric indicator circles thereon, rotating the shaft with its reflector to cause the reflected image to move and trace a circle on said target, and adjusting the shaft axis relative to the reference point to cause the image to trace a circle concentric with the indicator circles.

2,436,893
FLUID DRIVE FOR MOTORCYCLES
Frank C. Lawson, Anderson, Ind.
Application February 16, 1945, Serial No. 578,145
1 Claim. (Cl. 180—33)



In a motorcycle of the tandem two-wheel type, a motorcycle frame having spaced rear fork members, a ground-engaging traction wheel disposed between said fork members, said wheel including a fluid containing housing provided with a peripheral tire and having spaced laterally projecting hub members journaled at their outer ends in said fork members, said housing being provided with substantially radial internal vanes on one side thereof, a driven shaft journaled in said hub members and having an end projecting from one of the latter outwardly of the adjacent fork member, an impeller disk rotatable in the housing and fixed on said driven shaft between said hub members, said impeller disk having substantially radial vanes coacting with the housing vanes to drive the housing through the medium of the fluid within the latter, a motor mounted in the motorcycle frame forwardly of said wheel, and a driving connection between the motor and the projecting end of said driven shaft.

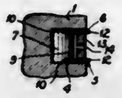
2,436,894
FAIR-LEAD FOR CABLES, ROPES, AND THE LIKE
Edward B. Magee, Port Colborne, Ontario, Canada, assignor to Port Colborne Iron Works, Limited, Port Colborne, Ontario, Canada, a company of Canada
Application February 8, 1945, Serial No. 576,886
In Canada February 21, 1944
4 Claims. (Cl. 254—190)



1. In a device of the character described, a support comprising an annular member having an inwardly directed flange around one edge thereof providing a central opening, a cover secured on the other edge of the annular member and having an aligned opening of less diameter than the diameter of the annular member, a housing comprising an annular member having spaced external flanges around its periphery forming a lubricant-retaining pocket therebetween, said housing being rotatably mounted within said support with said external flanges located between said first flange and said cover, means to intro-

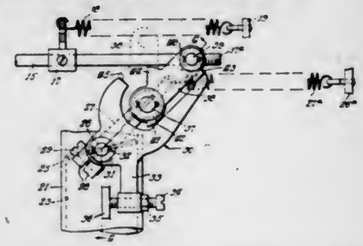
duce lubricant into the pocket between said external flanges, ball-bearings between said first flange and one edge of said housing member, sheave members rotatably mounted in said hous-

ing member in spaced relation to one another and to the axis of the housing member, and cable guide means carried by said housing member for guiding a cable into one of the sheave members.



2,436,895
MEDICINAL APPLICATOR AND THERAPEUTIC DEVICE
Louis C. Markowitz, San Diego, Calif.
Application August 19, 1946, Serial No. 691,505
1 Claim. (Cl. 128—256)

In a device of the class described, the combination of a hollow body adapted to contain liquid therein, having a pair of opposed openings in the side walls thereof, a tubular member having a central bore positioned in said openings in said body, a plunger reciprocally mounted in the bore of said tubular member, and a funnel-shaped medicine applicator secured in connection with one of said openings in said body communicating with the movable end of said plunger in said tubular member.

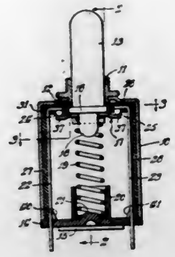


2,436,896
PISTON PACKING
Arden J. Mummert, University City, and Harold P. Phillips, Webster Groves, Mo., assignors, by mesne assignments, to Perfect Circle Corporation, a corporation of Indiana
Application December 16, 1939, Serial No. 309,680
6 Claims. (Cl. 309—45)

1. A piston packing including a plurality of ring members formed of ribbon steel, and a resilient expander of sinuous form having alternate long flexible portions and short connecting portions, said connecting portions having a radius different from that of said flexible portions and each being arranged to provide ring contacting shoulders adapted to engage said ring members, the lateral edges of the remainder of said connecting portions being adapted to engage said

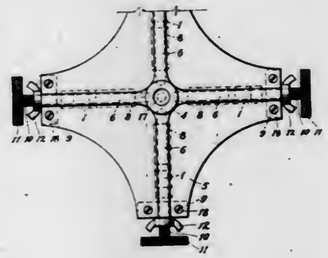
ring members in order to separate adjacent ring members a predetermined distance from each other.

2,436,897
CARBURETOR CONTROL LINKAGE
Harold Nutt, Chicago, Ill., assignor to Borg-Warner Corporation, Chicago, Ill., a corporation of Illinois
Application February 1, 1945, Serial No. 575,642
8 Claims. (Cl. 74—516)



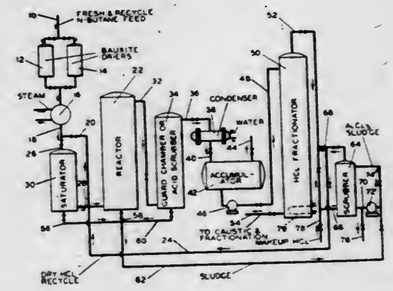
1. In combination with a rockable spindle for a carburetor throttle valve and the like, a rocker arm secured to said spindle for oscillating the same; a manually reciprocable actuator rod; and control means operatively connecting said arm and actuator rod for effecting multiple-stage movement of said spindle, said control means comprising an idle lever swingingly mounted on said spindle; means arresting movement of said idle lever in one direction; and a cam device rotatably mounted on said rocker arm, said cam device having operative connection with said rod and being adapted to act on said idle lever when the latter is in said arrested position for effecting movement of said arm independently of said idle lever to rock said spindle through a first stage of its movement; and continued movement of said cam device being effective to move said idle lever away from its arresting means and rock said spindle through another stage of movement.

2,436,898
PLUNGER SWITCH
Ernst Walter Rickmeyer, Elmhurst, Ill., assignor to Jefferson Electric Company, Bellwood, Ill., a corporation of Illinois
Application January 20, 1945, Serial No. 573,656
2 Claims. (Cl. 200—159)



1. A plunger type switch comprising a metal housing having a closed top, a base therefor, an insulating lining for said housing, a plunger extending through said top, means to bias said plunger upwardly, a bridging member carried by said plunger, contact members adapted to be engaged by said bridging member when said plunger is in its extended position, L-shaped conducting strips having vertically extending portions disposed along said insulating lining and extending through said base member and having horizontally extending portions on which said contact members are carried, and a contact mounting

member at the top of said housing provided with apertures through which said strips and contact members extend for maintaining said strips and contact members in spaced positions at op-

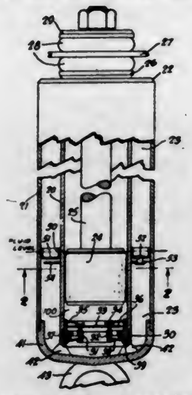


posite sides of said plunger, said horizontally disposed portion being confined between the upper surface of said contact mounting member and the insulating lining adjacent the closed top of said housing.

2,436,899
CIRCULAR CUTTER
Paul Euclid Rivest, London, Ontario, Canada
Application December 5, 1945, Serial No. 632,992
4 Claims. (Cl. 164—71)

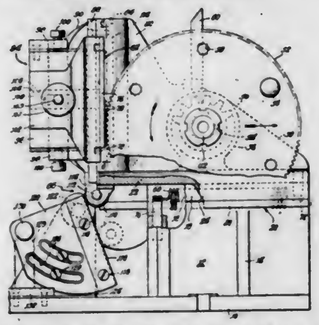
1. A circular cutting attachment for a drill press comprising an upper plate reinforced with ribs radiating from its center, a lower corresponding plate provided with a plurality of symmetrically spaced slots, a plurality of sectional walls separating said plates, a central hollow shaft having at the upper end thereof a taper for attachment to a drill press spindle, attached to said plates extending upwardly beyond the upper plate and terminating with the lower plate, the above items constituting the framework of said attachment; a plurality of symmetrically spaced adjustable cutter holders contained within said framework and extending through the slots in the lower plate, a corresponding number of circular rotating cutting disks, one attached to each of said holders; threaded adjustable bolts passing through and rotatably held against the walls of the framework, said bolts being rotatably supported at their other ends by the central shaft and being screwed through tapped holes in the said cutter holders, said bolts being further provided with knurled heads and lock nuts; and each of said cutter holders being guided by a pair or guide bars which pass through said cutter holders and are anchored by the framework wall and the central shaft.

2,436,900
METHOD FOR THE REMOVAL OF TRACES OF WATER FROM MIXTURES OF HYDROGEN CHLORIDE WITH LOW-BOILING HYDROCARBONS
Perry L. Roberts, Bartlesville, Okla., assignor to Phillips Petroleum Company, a corporation of Delaware
Application December 31, 1943, Serial No. 516,507
7 Claims. (Cl. 260—683.5)



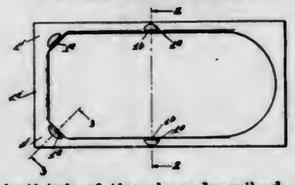
1. A process which comprises contacting normal butane in admixture with a minor catalyst-activating amount of hydrogen chloride in vapor phase with a solid aluminum chloride isomerization catalyst at isomerization conditions of temperature, pressure, and contact time to form isobutane, removing residual aluminum chloride from effluent vapors, subjecting conversion products comprising isobutane, unconverted normal butane, hydrogen chloride, and traces of water, to fractionation to recover a hydrogen chloride-rich vaporous stream containing a substantial proportion of said water, contacting said stream at a temperature within the range of 75 to 175° F. with a liquid aluminum chloride sludge derived from said catalyst and containing free aluminum chloride to remove water from said stream by reaction with said sludge, recovering unconverted normal butane from said conversion products and recycling to said catalyst, returning the thus-dried hydrogen chloride-rich stream to admixture with normal butane, and contacting said admixture with said catalyst as hereinabove described.

2,436,901
HYDRAULIC SHOCK ABSORBER
Edwin F. Rossman, Dayton, Ohio, assignor to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application September 13, 1945, Serial No. 615,997
3 Claims. (Cl. 188—88)



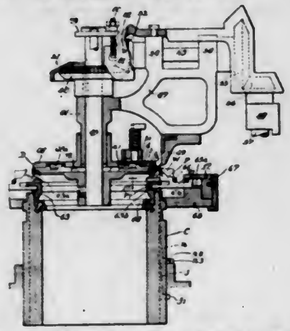
1. An hydraulic shock absorber comprising a cylinder; a piston in said cylinder; a fluid reservoir surrounding and in communication with said cylinder; fluid flow controlling means between the cylinder and reservoir; and means

fixed in the reservoir, below the minimum fluid level therein, for restricting the movement of



fluid in the reservoir to a greater degree in one direction than in the other.

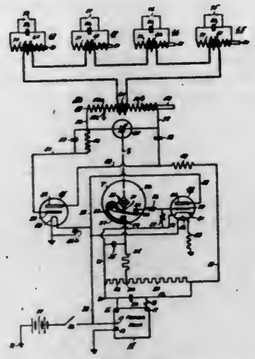
2,436,902
GEAR GRINDING FIXTURE
John D. Rovick, Muncie, Ind., assignor to Borg-Warner Corporation, Chicago, Ill., a corporation of Illinois
Application February 1, 1945, Serial No. 575,640
17 Claims. (Cl. 51—123)



17. In combination with a rotatable grinding wheel; a gear grinding fixture comprising a base; and an assembly on said base comprised of two slides arranged for reciprocable movement in planes transverse to each other, the first slide being adapted for horizontal sliding movement on said base, the second slide being supported on the first slide for movement therewith and being adapted for vertical reciprocable movement independent of said first slide; rotatable driving means including a spindle carried by said first slide, said spindle being adapted to support a work gear and impart rotative movement thereto during engagement of a work gear tooth face with said grinding wheel; means on the second slide engaged with said rotatable driving means for effecting the aforesaid vertical reciprocable movement of said second slide; cam means interposed between said base and second slide and being effective during reciprocatory movement of the second slide to impart the aforesaid horizontal reciprocatory movement of the first slide, said assembly being so constructed and arranged that the work gear, during engagement with said grinding wheel, is rotated by said driving means and said work gear is also bodily moved transverse to its rotational axis by said second slide thereby to form a work face on a gear tooth; and indexing means effective to engage another tooth face of the work gear with said grinding wheel.

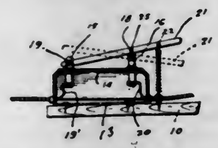
2,436,903
BATHTUB HANDHOLD CONSTRUCTION
Minnie M. Schafer, San Diego, Calif.
Application June 9, 1945, Serial No. 598,440
2 Claims. (Cl. 4—185)

1. A bathtub of the class described, consisting of a conventional bathtub having upwardly extending walls and corners at the intersection of said walls and hand hold portions extending across said corners and in integral connection with said intersecting walls.



2,436,904
KNITTING MACHINE
Frederick M. Shea, Kankakee, Ill., assignor to Bear Brand Hosiery Co., Kankakee, Ill., a corporation of Illinois
Application July 19, 1945, Serial No. 605,983
30 Claims. (Cl. 66—92)

1. In a circular knitting machine, a series of cylinder needles, a series of dial needles, a series of sinkers arranged in operative relation to said cylinder needles, a series of auxiliary sinkers, means for operating some of said needles and said first named sinkers to knit a ribbed top with said auxiliary sinkers inactive, means for rendering said dial needles inactive, and means for then operating said cylinder needles and both series of sinkers to knit a body portion having terry loops.



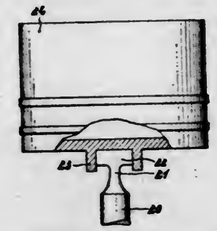
2,436,905
IGNITION SYSTEM
Brooks H. Short, Anderson, Ind., assignor to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application May 14, 1946, Serial No. 669,497
3 Claims. (Cl. 315—210)

1. An ignition system comprising a resonator connected with a spark gap, an oscillator including a coil inductively coupled with the resonator, a variable condenser for tuning the oscillator to the resonator and a tube, a power source, main and auxiliary condensers charged by the source,

a thyratron through which the main condenser will discharge to the oscillator tube when the thyratron becomes conducting, and means for causing the auxiliary condenser to discharge to the grid of the thyratron to render it conducting.

2,436,906
CLOCK-CONTROLLED SWITCH
Theodore Svoboda, Fairbury, Nebr.
Application April 25, 1945, Serial No. 590,209
1 Claim. (Cl. 200—35)

In a device of the class described, a non-conducting casing, a contact supported adjacent one end of said casing, a contact supported adjacent the opposite end of said casing, each such contacts having a pair of apertured upstanding ears, a switch arm having apertures adapted to align with the apertures in the ears of the contacts, a spring for urging the switch arm to move in one direction, and a pivot pin adapted to be extended through either of one pair of ears or the other pair of ears and the respective openings in the switch arm whereby the switch may be used not only to establish the flow of current to a piece of equipment, but may also be used to discontinue the flow of current to a piece of equipment when moved in the same direction.

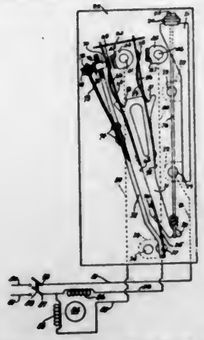


2,436,907
INDIRECTLY HEATED CATHODE
Russell F. Trimble, Cambridge, Mass., assignor, by mesne assignments, to the United States of America, as represented by the Secretary of War
Application June 23, 1945, Serial No. 601,119
6 Claims. (Cl. 250—27.5)

1. An indirectly heated cathode for a thermionic tube, said cathode comprising a hollow, metallic cathode cylinder, an electron-emissive layer on the outer surface of said cylinder, and a heater element within said cylinder, said heater

element comprising a flat, compressed, helical, ribbon-shaped coil rolled into a flat spiral.

2,436,908
FLEXIBLE CONNECTING ROD
Franciscus Lambertus Van Weenen and Willem Hendrik Stigter, Eindhoven, Netherlands, assignors to Hartford National Bank & Trust Co., Hartford, Conn., as trustee
Application September 4, 1945, Serial No. 614,348
In the Netherlands February 3, 1943
Section 1, Public Law 690, August 8, 1946
Patent expires February 3, 1963
8 Claims. (Cl. 309—17)

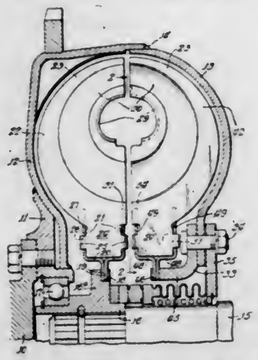


1. A device comprising a rectilinear reciprocating body, a driving mechanism, a driving rod comprising a substantially rigid portion interposed between the reciprocating body and the driving mechanism, and a substantially flexible member interposed between said rigid portion and said body, said flexible member constituting a resilient coupling between said rigid portion and said reciprocating body having a degree of movement at right angles to the axis of said rod and having a second degree of movement at right angles to the axis of the rod and at right angles to the said first degree of movement.

2,436,909
THERMOSTATIC SWITCH
Calvin J. Werner, Dayton, Ohio, assignor to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application April 11, 1945, Serial No. 587,755
3 Claims. (Cl. 200—113)

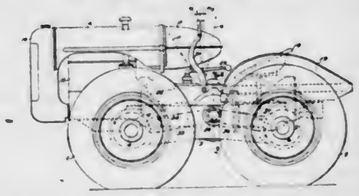
1. A control switch comprising, in combination, a stationary frame, a movable contact carrying member; flexible means securing said member to the frame; an actuator for said member; stationary contacts; flexible contact blades carried by said member and having over-center means for shifting said contact blades toward or away from said stationary contacts in response to a predetermined movement of the contact carrying member in one direction or the other respectively; a spacer bar between said blades; a stop engageable by one of said blades to limit its movement away from the stationary contact; and ther-

mal means secured to the frame and carrying the stop for adjusting its position relatively to the



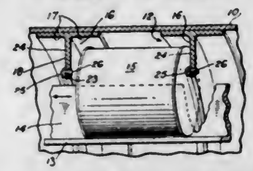
one of said blades in accordance with temperatures ambient to the switch.

2,436,910
COMMUTATOR BAR
Calvin J. Werner, Dayton, Ohio, assignor to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application April 10, 1946, Serial No. 660,886
3 Claims. (Cl. 171—320)



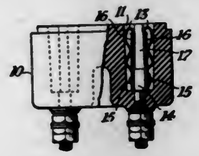
1. A composite commutator bar, keystone-shaped in cross section and comprising a core of comparatively tough metal having converging sides, two longitudinal edges, one wider than the other and two end edges, and a metal covering secured to all surfaces of the core excepting the end edges, said covering having a greater electrical conductivity than the core and being substantially thin on the two converging sides of the core and comparatively thicker on the wider, longitudinal edge of the core.

2,436,911
FLUID COUPLING
Reinhold C. Zeidler, Detroit, Mich., assignor to Borg-Warner Corporation, Chicago, Ill., a corporation of Illinois
Application April 26, 1945, Serial No. 590,348
13 Claims. (Cl. 103—115)



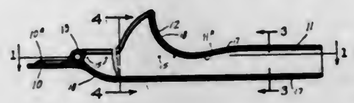
1. A hydraulic torque transmitting device comprising a rotatable vaned element; a housing for said element; said element comprising a hub member and a plurality of flexible vanes extending therefrom, said vanes having a flexible portion outside the working circuit of the fluid; and individually curved elements integral with said vanes, said curved elements collectively forming a core ring.

2,436,912
DRIVE CONTROL MECHANISM FOR MOTOR VEHICLES AND DETENT DEVICE THEREFOR
Albert W. Bonham, Jr., Salt Lake City, Utah, assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a corporation of Delaware
Application December 8, 1945, Serial No. 633,811
12 Claims. (Cl. 180—17)



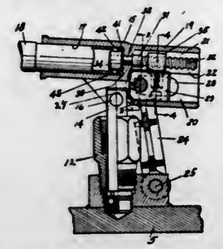
1. In a motor vehicle, in combination, two control members adjustable independently of each other within a predetermined idling range, power transmitting means adapted to drive a pair of traction devices and operative to drive one or the other of said traction devices in response to adjustment of one or the other of said control members, respectively, beyond said idling range, and a pair of releasable detent mechanisms associated, respectively, with said control members and operative to determine primary and secondary limit positions of each of said control members within said idling range, said detent mechanisms including locking means operative to lock said detent mechanisms as long as one of said control members is in its said primary limit position and to unlock said detent mechanisms upon adjustment of both of said control members to their said secondary limit positions.

2,436,913
CONTINUOUS COOKER-COOLER DRIVE
Eli Bourland, Millbrae Highlands, Calif., assignor to Pacific Can Company, San Francisco, Calif., a corporation of Nevada
Application June 4, 1945, Serial No. 597,544
4 Claims. (Cl. 99—365)



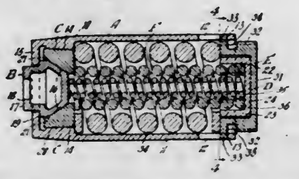
1. In a can-treating apparatus of the horizontal drum type employing a horizontally mounted rotatable reel having elongated pockets for conveying the cans in a generally helical path through said drum, and a track member therein surrounding said reel pockets and having a radial member adapted to advance each can axially in its respective pocket, said radial member having formed thereon a bead or rib-like antifriction bearing member extending axially outwardly from the wall of said radial member and from end to end of said member, whereby said bead is the only part of said track member in contact with a can end while guiding it in its pocket.

2,436,914
DETACHABLE ELECTRICAL CONNECTOR
Edgar W. Breisch, Edgewood, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a corporation of Pennsylvania
Application November 17, 1945, Serial No. 629,255
4 Claims. (Cl. 173—328)



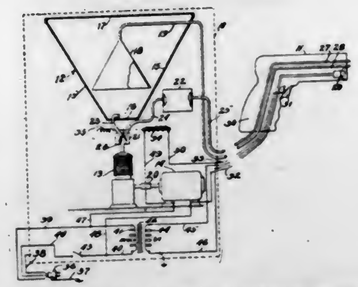
1. In a detachable electrical connector using a cylindrical plug, the combination comprising, a receptacle including two flat contact springs and two flat reenforcing springs, said contact springs mounted in a rectangular compartment of an insulation base to receive said plug and to engage diametrically opposite tangent lines of the plug, said reenforcing springs secured one to each of said contact springs to reenforce the pressure between the contact spring and said plug at the forward end of the spring, each said contact spring formed with a portion bent toward the rear of the spring; and each such bent portion of a contact spring formed with three arches, a first one of which engages a wall of the compartment near the forward end of the compartment, a second one of which arches exerts pressure on the associated contact spring at a point near the mid point of the line of contact of the contact spring and the plug, and a third one of which arches engages the wall of the compartment near the rear of the compartment.

2,436,915
BEDPAN SYSTEM
Fredrick W. Coffing, Danville, Ill.
Application April 20, 1945, Serial No. 589,332
9 Claims. (Cl. 4—112)



1. A comparatively thin bed pan including a pad-like base of appreciable area, a low rim defined shallow bowl formed therein and centrally disposed thereon and of appreciably less area than that of the base, a forwardly directed, centrally positioned, tubular discharge from the bowl adapted for connection at the outer end to a source of suction and disposed above and as a part of the base and merging into the rim at the intake end, and an upstanding guard at the junction of the intake end of the tubular discharge and the bowl, said discharge and guard being adapted to be positioned between and straddled by a patient's legs when the patient is seated upon the pan.

2,436,916
ADJUSTABLE FULCRUM FOR LEVER MECHANISMS
Frank B. Copeland, Dayton, Ohio, assignor to The Joyce-Cridland Company, Dayton, Ohio, a corporation of Ohio
Application April 10, 1944, Serial No. 530,337
21 Claims. (Cl. 254—1)



3. A lever mechanism comprising an operating member having means for operatively connecting the same with a part to be operated, a movable fulcrum, a member slidably supported on said operating member for movement lengthwise thereof and held against movement transversely thereto, means for connecting said slidable member with said fulcrum, a screw rotatably mounted on said operating member, means for operatively connecting said screw with said slidable member, a lever for imparting operative movement to said operating member and rotatable with relation thereto, and means for connecting said screw with said lever for rotation thereby.

2,436,917
FRICTION SHOCK ABSORBER FOR RAILWAY DRAFT RIGGINGS
George E. Dath, Mokena, Ill., assignor to W. H. Miner, Inc., Chicago, Ill., a corporation of Delaware
Application October 18, 1944, Serial No. 559,156
4 Claims. (Cl. 213—34)

1. In a friction shock absorber, the combination with a lengthwise extending casing having a friction shell section at one end; of a lengthwise movable spring cap telescoped within the other end of the casing; a retaining element for said spring cap, said retaining element having laterally projecting retaining lugs, and said casing having lengthwise extending slots closed at the rear end within which said lugs are engaged, the lugs of said retaining element clearing the interior side walls of the casing when the retaining element is tilted at an angle with respect to a transverse plane perpendicular to the longitudinal axis of the casing to permit insertion of the retaining element, said element when righted with the lugs transversely aligned with the slots having the lugs engaged in said slots; a friction clutch slidingly telescoped within the spring cage section of the casing; and spring means yieldingly opposing relative lengthwise inward movement of the clutch and spring cap.

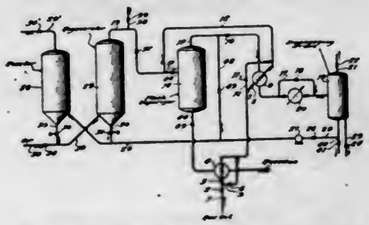
2,436,918
MAGNETIC INSPECTION APPARATUS
Taber de Forest, Chicago, Ill., assignor to Magnaflux Corporation, Chicago, Ill., a corporation of Delaware
Application July 22, 1942, Serial No. 451,851
4 Claims. (Cl. 175—183)

1. Apparatus for testing a magnetized object for flaws and other defects comprising a closed hopper having paramagnetic powder therein, a hood in said hopper diverging downwardly a conduit communicating with the upper part of said hood and extending out of said hopper, an air compressor, a powder gun, said powder gun having a pair of conduits therein and extending out through the muzzle of said gun, one of said conduits in said gun being connected to the conduit in communication with the hood and the other of said conduits in said gun being connected to said air compressor, said air compressor also having a discharge conduit extending into the lower part of said hopper, and valve means in the discharge of said air compressor for selectively directing air to said hopper or directly to said gun.

2,436,919
FLY SPRAYS COMPRISING AN N-ALKYLPHTHALIMIDE AND DDT
Samuel I. Gertler and Herbert L. J. Haller, Washington, D. C., assignors to the United States of America, as represented by the Secretary of Agriculture
No Drawing. Application October 9, 1944, Serial No. 557,917
3 Claims. (Cl. 167—30)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

3. A method of destroying flying insects comprising contacting said insects with a composition containing a member selected from the group consisting of N-butylphthalimide and N-amylphthalimide as its essential knockdown agent and 2,2-bis(p-chlorophenyl)-1,1,1-trichloroethane as its essential active insecticidal ingredient.

2,436,920
FLY SPRAYS COMPRISING AN N,N-DIALKYLCINNAMAMIDE AND DDT
Samuel I. Gertler and Herbert L. J. Haller, Washington, D. C., assignors to the United States of America, as represented by the Secretary of Agriculture
No Drawing. Application October 9, 1944, Serial No. 557,918
3 Claims. (Cl. 167—30)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

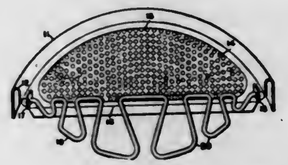


1. A fly spray comprising a member selected from the group consisting of N,N-dipropylcinnamamide and N,N-diisopropylcinnamamide as its essential knockdown agent and 2,2-bis(p-chlorophenyl)-1,1,1-trichloroethane as its essential active insecticidal ingredient, incorporated in a mineral oil carrier.

2,436,921
DIAL LOCK
Hallan E. Goldstine and Oswin F. Voigt, Port Jefferson Station, N. Y., assignors to Radio Corporation of America, a corporation of Delaware
Application March 22, 1944, Serial No. 527,597
4 Claims. (Cl. 188—83)

1. An article of manufacture including a support member having a slot and apertures adjacent thereto adapted to receive mounting means, a folded open ended spring located in and around the slot in said support member, a threaded stud passing through apertures in said spring, means located on one end of said stud for engaging the slot in said support member to prevent the turning thereof, and a threaded member positioned on said stud and arranged to close the open ended portion of said spring.

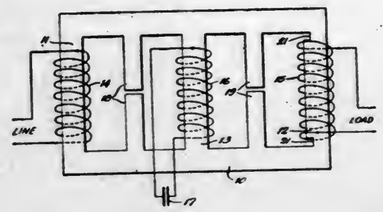
2,436,922
CATALYTIC CONVERSION PROCESS
Henry W. Grote, Downers Grove, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a corporation of Delaware
Application June 28, 1946, Serial No. 679,891
5 Claims. (Cl. 196—52)



1. In a hydrocarbon conversion process wherein a hydrocarbon charge is contacted at conversion conditions with a solid conversion catalyst in a hydrocarbon conversion step thereby depositing carbonaceous contaminants on said catalyst and said contaminants are subsequently removed by combustion thereof with an oxygen-containing regenerating gas in a regenerating step, the improved method of preparing a suitable hydrocarbon charge for said hydrocarbon conversion step without the use of external heat which comprises subjecting a heavy hydrocarbon oil to indirect heat exchange with vaporization products obtained as hereinafter described, commingling the thus heated heavy oil with hot substantially oxygen-free effluent combustion gases from said regeneration step, flash vaporizing the resultant mixture to separate vaporization products comprising combustion gases and lower boiling hydrocarbon vapors from a higher boiling hydrocarbon residue, cooling said vaporization products by indirect heat exchange with said heavy hydrocarbon oil to condense said lower boiling hydrocarbon vapors, said heat exchange step and said hot combustion gases being substantially the sole sources of heat supplied to said heavy hydrocarbon oil, and supplying the resultant lower boiling hydrocarbon condensate to said conversion step as charge thereto.

2,436,923
DEMETHYLATION OF HYDROCARBONS IN PRESENCE OF WATER
Vladimir Haensel, Clarendon Hills, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a corporation of Delaware
No Drawing. Application April 8, 1946, Serial No. 660,433
8 Claims. (Cl. 260—666)

8. A process for the demethylation of a hydrocarbon containing more than 4 carbon atoms per molecule and selected from the group consisting of paraffins, olefins, alkyl aromatics and saturated alkyl hydroaromatics, which comprises commingling water with said hydrocarbon in an amount of from about 2 to about 12 molecular proportions of water per molecular proportion of hydrocarbon, and subjecting the resultant mixture to reaction at a temperature of from about 180° to about 350° C. in the presence of an active hydrogenation catalyst comprising a metal of group VIII of the periodic table with an atomic number of at least 27.

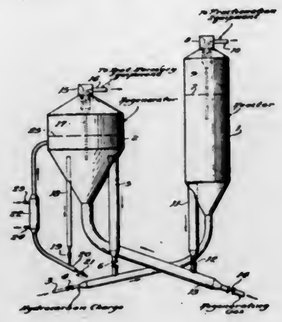


2,436,924
PAINTER'S ACCESSORY
Einer F. Hansen, Highland Park, Mich.
Application May 11, 1945, Serial No. 593,305
2 Claims. (Cl. 211—65)

1. In a device of the character described, an arcuate body portion having a rolled edge adapted to be supported over the edge of a paint can, a concave central portion having a plurality of apertures therein, and a brush rack comprising a wire bent and rebent upon itself, pivotly mounted on said body portion.

2,436,925
ELECTRIC REGULATING APPARATUS
Eugene H. Haug, Chicago, and Fred A. Hansen, River Forest, Ill.
Application December 31, 1943, Serial No. 516,364
3 Claims. (Cl. 171—119)

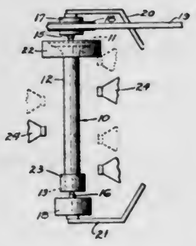
1. Electric regulating apparatus comprising a core of magnetic material having three interconnected legs, a winding on one of the legs connected to a source of alternating current, a winding on another of the legs connected to a load, a winding on the third leg, and a condenser connected across the last named winding, said other of the legs being so constructed and arranged that it will saturate prior to the remainder of the core.



2,436,926
POLYMERIZATION OF ACRYLIC ACID NITRILES
Ralph Albert Jacobson, Landenburg, Pa., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application August 2, 1943, Serial No. 497,056
5 Claims. (Cl. 260—84)

1. A process for the polymerization of a member of the group consisting of (1) acrylic acid nitrile and (2) a mixture of acrylic acid nitrile together with a minor proportion of another copolymerizable, unsaturated compound, to obtain a dimethyl formamide-soluble polymer which consists in dissolving a member of the group consisting of (1) acrylic acid nitrile and (2) a mixture of acrylic acid nitrile together with a minor proportion of another copolymerizable, unsaturated compound and a water-soluble, oxygen-yielding peroxy catalyst compound in an amount of water sufficient only to provide a homogeneous solution and to satisfy the solubility characteristics of said nitrile at the running temperature employed, and then polymerizing said member of the group consisting of (1) acrylic acid nitrile and (2) a mixture of acrylic acid nitrile together with a minor proportion of another copolymerizable, unsaturated compound, at a temperature of from 20° C.–50° C.

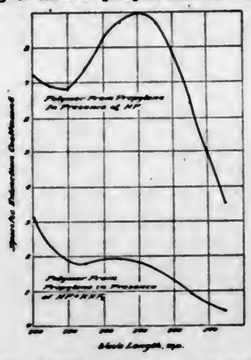
2,436,927
PREVENTION OF AFTERBURNING IN FLUIDIZED CATALYTIC CRACKING PROCESSES
Louis S. Kassel, Riverside, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a corporation of Delaware
Application November 29, 1943, Serial No. 512,116
8 Claims. (Cl. 196—52)



1. In the regeneration of subdivided silica-alumina catalyst particles contaminated with a combustible deposit wherein the catalyst is regenerated by passing an oxygen-containing gas upwardly through a mass of the contaminated particles in a regeneration zone at a rate regulated to form a lower dense phase of relatively high particle concentration and an upper light phase of reduced particle concentration and said deposit is burned in said dense phase, the method of preventing "afterburning" in said light phase which comprises subjecting to said regeneration a physical mixture of discrete particles of said silica-alumina catalyst with discrete particles of

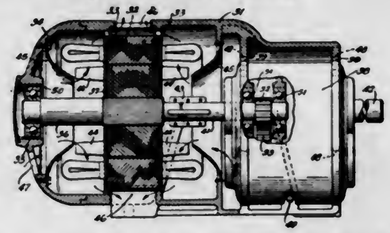
a supported carbon monoxide oxidizing catalyst comprising a metal selected from the group consisting of copper, chromium, manganese, cobalt

and nickel, said discrete particles of carbon monoxide oxidizing catalyst comprising from about 0.0005 to about 0.01 percent by weight of the total catalyst mixture.



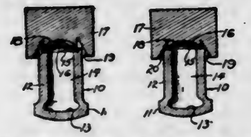
2,436,928
METHOD OF AND APPARATUS FOR MAKING POPPET VALVES
Robert A. Kempe, Cleveland, Ohio, assignor to Thompson Products, Inc., Cleveland, Ohio, a corporation of Ohio
Application September 2, 1944, Serial No. 552,395
4 Claims. (Cl. 123—188)

1. As an article of manufacture, a valve of the poppet type including a head and a stem, said stem having a guide portion the outer area of which is shot work hardened, said stem, however, having a ground surface only at said shot worked area and which is substantially free of pits.



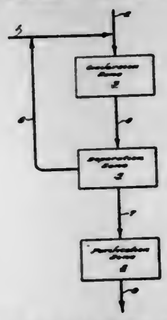
2,436,929
POLYMERIZATION OF OLEFINIC HYDROCARBONS
Carl B. Linn, Riverside, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a corporation of Delaware
Application May 31, 1945, Serial No. 596,922
14 Claims. (Cl. 260—683.15)

12. A process for producing hydrocarbons of higher molecular weight which comprises polymerizing an olefinic hydrocarbon in the presence of a catalyst consisting essentially of a solution predominating in liquid hydrogen fluoride and containing a minor proportion of an inorganic



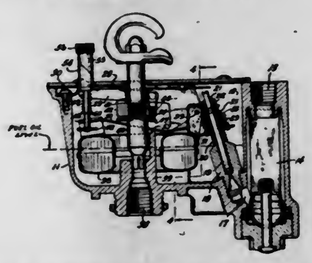
salt selected from the group consisting of the alkali metal fluorides and sulfates.

2,436,930
MOTOR REDUCER UNIT
Arthur Mackmann, Chicago, Ill., assignor to Foote Bros. Gear and Machine Corporation, Chicago, Ill., a corporation of Delaware
Application January 17, 1944, Serial No. 518,623
8 Claims. (Cl. 172—36)



1. A motor reducer unit comprising an elongated unitary housing, a motor element secured to the housing, a cartridge type gear unit fitting into the housing adjacent one end including a closed casing and driving and driven shafts projecting rotatably from the opposite ends of the casing, an extension on the driving shaft rigid therewith and projecting past the motor element, a motor element on the extension, a bearing to support the end of the extension, and yielding means supporting the bearing in the housing.

2,436,931
METHOD OF PREVENTING SCALING DURING THE FORGING OF HOLLOW METAL ARTICLES
William J. Marencik, Parma, Ohio, assignor to Thompson Products, Inc., Cleveland, Ohio, a corporation of Ohio
Application August 25, 1944, Serial No. 551,195
5 Claims. (Cl. 29—156.7)



1. In the method of making a hollow head valve in which a cup-shaped blank is subjected to a series of hot forging operations, the improvement whereby scaling of the internal surface of the blank is prevented, which comprises applying an outwardly dished metal cap to the open end of said blank to seal the empty cavity therein, peening the metal of said blank about said cap to secure the same in place and seal the interior of said blank, and subsequently subjecting said blank to hot forging operations.

2,436,932
PRODUCTION OF POLYCYCLIC HYDROCARBONS
William J. Mattox, La Grange, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a corporation of Delaware
Application April 25, 1945, Serial No. 590,213
4 Claims. (Cl. 260—668)

1. A process for producing naphthalene which comprises reacting a charging stock comprising essentially mono-ethylbenzene at a temperature of from about 525° to about 700° C. and a liquid hourly space velocity of from about 0.1 to about 3.0 in the presence of a synthetically prepared catalyst comprising silica and at least one metal oxide selected from the group consisting of alumina, thoria, and zirconia.

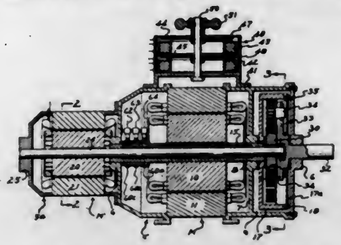
2,436,933
DIFFERENT DENSITY FUEL LEVEL CONTROL DEVICE
Lourdes V. McCarty, Milwaukee, Wis., assignor to Automatic Products Company, Milwaukee, Wis., a corporation of Wisconsin
Application November 5, 1943, Serial No. 509,096
5 Claims. (Cl. 137—68)

1. In a constant liquid flow control device, a casing defining a chamber having inlet and outlet passages, a valve controlling the flow of liquid through the inlet passage into the chamber, a float designed for a given buoyancy in a liquid of low specific gravity and connected with said valve to actuate the same upon rise in level of liquid in the chamber, a lever pivotally mounted in the chamber and arranged normally to rest at one end thereof on said float, lever raising means, means mounting said lever raising means in operative relation to said lever to raise said lever out of engagement with said float, and means engageable with a part of said lever raising means as said latter means reaches a predetermined position to releasably lock the lever raising means in position to retain said lever out of engagement with said float to retain the predetermined buoyancy thereof upon flow through the chamber of liquid of the given specific gravity.

2,436,934
BRISTLE TUFT AND HOLDING BAR
Niels E. Nielsen, Summit, and Fred G. Stirling, Maplewood, N. J.
Application April 18, 1945, Serial No. 588,970
4 Claims. (Cl. 15—199)

1. A brush comprising a support bar, said bar having a plurality of openings therethrough, a collar extending from said support at each of said openings, looped tufts of bristles arranged in said collars and extending through said openings, a retaining pin extending through the looped portions of said tufts and along the free ends of said collars and a channel member overlapping said looped portions and said collars, the effective length of said retaining pin located entirely inside of said channel member, said channel member located entirely outside of said collars, and means for securing said channel member to said bar.

2,436,935
FASTENER FOR TYING ELEMENTS
Albert A. Ohler, Detroit, Mich.
Application September 7, 1945, Serial No. 614,988
2 Claims. (Cl. 24—18)

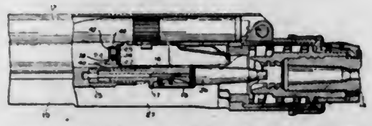


1. A cord fastener comprising an elongated plate having first and second longitudinal edges and having a pair of end cord apertures spaced apart from one another near the opposite ends of said plate and a third cord aperture intermediate said end apertures and located nearer one end aperture than the other end aperture, one end of said plate being tapered obliquely from said first edge toward said second edge and the other end of said plate being tapered obliquely from said second edge toward said first edge.

2,436,936
VARIABLE-SPEED DRIVE
Herbert E. Page, Pasadena, Calif.
Application May 22, 1944, Serial No. 536,698
4 Claims. (Cl. 318—8)

4. A variable speed device comprising, in combination with a driven shaft, a planetary unit including ring, sun and planet gears, said planet gears being operatively connected to the driven shaft, a drive shaft operatively connected to one of the other gears, a main electric motor operatively connected to the drive shaft, a second drive

shaft operatively connected to the other gear, a control motor operatively connected to the latter shaft, electrical conductors connecting the stator of the control motor with the rotor of the main motor whereby to operate the control motor



by current generated by the main motor, and a voltage regulator operatively connected with said conductors to variably control said operation of the control motor, the speed of said driven shaft thereby being automatically variable in response to relative variations in operation of the motors.

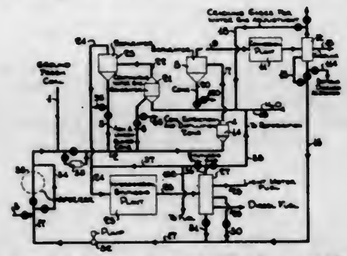
2,436,937

SHELL EJECTING MECHANISM FOR MACHINE GUNS

Francis I. Rataiczak, Dayton, Ohio, assignor to General Motors Corporation, Dayton, Ohio, a corporation of Delaware

Application May 23, 1945, Serial No. 595,265
10 Claims. (Cl. 42—25)

1. In a rapid fire machine gun having a receiver, a receiver cover, shell ejecting mechanism comprising a mounting bar extending transversely of the receiver between the cover and the receiver, a shell engaging cam depending from said bar and arranged so as to engage the upper rear edge of each empty shell upon extraction of the shell from the gun barrel, and means for adjustably mounting said bar, said bar and said receiver cover having complementary cam surfaces in sliding engagement with one another and arranged at an angle relative to the horizontal axis of the gun, said cam surfaces being so arranged whereby rearward movement of said bar will cause downward movement of said bar, and spring means urging said surfaces into engagement with one another.



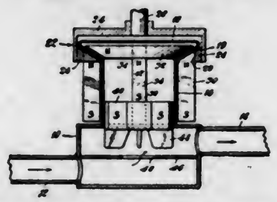
2,436,938

METHOD OF PRODUCING MOTOR FUEL

Walter G. Scharmann, Westfield, and Frank T. Barr, Summit, N. J., assignors to Standard Oil Development Company, a corporation of Delaware

Application February 22, 1945, Serial No. 579,300
13 Claims. (Cl. 196—56)

1. A continuous method of producing liquid motor fuels from coal which comprises continuously suspending powdered coal in a hydrocarbon oil being essentially free of cyclic hydrocarbons and having an end boiling point of between about 700° and 800° F. in a mixing zone to obtain a suspension containing substantially more than 50% by weight of coal, continuously conveying said suspension to a distillation-extraction zone, maintaining in said distillation-extraction zone conditions of residence time and temperatures not exceeding about 700° to 800° F. adapted to cause substantial removal of the volatile constituents from said coal, continuously separating distillate from coked residue, continuously withdrawing coked residue from said distillation-extraction zone, reacting at least a portion of said coked residue with steam



to produce water gas, recovering from said water gas a mixture of carbon monoxide and hydrogen suitable for the catalytic synthesis of liquid hydrocarbons therefrom, reacting said mixture in contact with a synthesis catalyst to obtain a synthetic hydrocarbon oil, recovering from said synthetic hydrocarbon oil a fraction being essentially free of cyclic hydrocarbons and having an end boiling point similar to that of the first-mentioned hydrocarbon oil, continuously recycling said fraction to said mixing zone and recovering liquid motor fuels from said distillate.

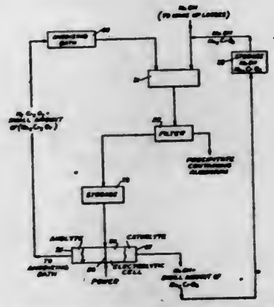
2,436,939

MAGNETIC COUPLING AND BEARING

Howard L. Schug, Palo Alto, Calif., assignor to The Hoover Company, North Canton, Ohio, a corporation of Ohio

Application October 21, 1943, Serial No. 507,097
9 Claims. (Cl. 172—284)

1. A magneto-drive device comprising, an annulus of magnetic material, circumferentially arranged axially extending magnet means secured to said annulus, said magnet means having opposite poles at opposite ends, and a pair of magnetic discs connected by magnet means rotatably mounted within said annulus and said axially extending magnet means, said second magnet means having its north and south poles at the same ends as said first magnet means.



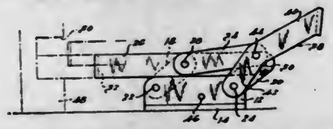
2,436,940

METHOD OF REGENERATING ANODIZING BATHS

Joseph Schulein, Corvallis, Oreg.

Application August 2, 1946, Serial No. 688,038
15 Claims. (Cl. 204—130)

1. A method of regenerating a chromic acid anodizing solution having a pH value less than 3 and containing undissociated aluminum dichromate, which comprises adding an alkaline agent of the class consisting of sodium hydroxide, potassium hydroxide, lime, calcium hydroxide and calcium carbonate to said solution to increase its pH value to not less than 3 and form an aluminum hydroxide precipitate, separating said precipitate from said solution, and thereafter removing the metal ions of said alkaline agent to adjust the pH value of said solution to less than 1.3.



9. A method of controlling the pH value of a chromic acid bath for anodizing aluminum-containing articles, comprising segregating a portion of said bath, adding lime to said portion to adjust the pH value of said portion to at least 3.0 and precipitate an aluminum compound in said portion, filtering said portion to remove the insoluble aluminum compound, adding sulfuric acid to the filtrate to adjust its pH value to between about 0.6 and 1.3, removing any precipitate formed thereby and adding the filtrate to the remainder of said bath.

2,436,941

TOGGLE CLAMP

Jack J. Sendoykas, Detroit, Mich.

Application March 28, 1945, Serial No. 585,348
3 Claims. (Cl. 144—290)

3. A clamp comprising a base; a pressure bar arranged adjacent to said base and having a projecting work engaging portion disposed laterally of said base; a pair of substantially parallel links extending between said bar and said base; pivots connecting said links to the bar and to the base, said pivots arranged generally in the form of a parallelogram; a handle; a link pivoted at one end to the handle intermediate the ends of the latter, said link and an end portion of said handle forming a toggle, and said toggle pivoted at its ends to a diametrically opposed pair of said pivots.

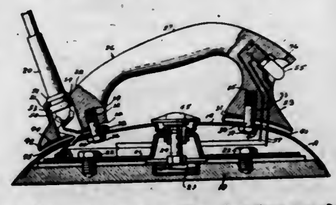
2,436,942

SEAL FOR FLOATING ROOF TANKS

Edgar E. Shanor, Sharon, Pa., assignor to General American Transportation Corporation, Chicago, Ill., a corporation of New York

Application March 23, 1944, Serial No. 527,689
2 Claims. (Cl. 220—26)

1. The combination of a storage tank for liquid having a vertical cylindrical wall, a roof deck floated upon the liquid in the tank and having a peripheral vertical wall annularly spaced from the tank wall, an annular series of plates disposed in said annular space and having their lower ends curved for contact with the tank wall and their upper ends extending above the deck wall, a pair of fulcrum bolts having outwardly turned upper ends extending through said plates for pivotally supporting the plates and having

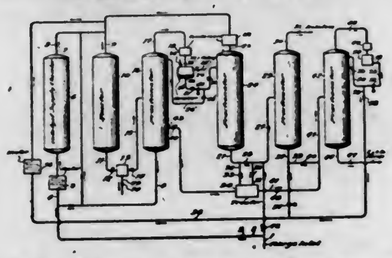


vertically disposed shank portions adjustably mounted on the inner side of said deck wall to adjust the contact of said plates with the tank wall relatively to the liquid level, a flexible continuous curtain secured at its inner edge to the deck wall and at its outer edge to the said plates below the liquid level, and spring devices acting upon said plates above said fulcrum bolts for yieldingly urging the plates in contact with the tank wall.

2,436,943

ELECTRIC FLATIRON

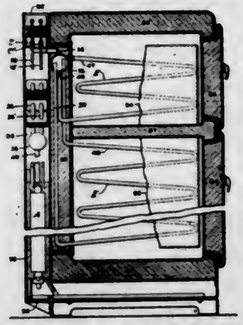
Leland H. Snyder, Chicago, Ill., assignor, by mesne assignments, to Quality Appliances, Inc., Chicago, Ill., a corporation of Illinois



Application November 29, 1944, Serial No. 565,610
6 Claims. (Cl. 38—89)

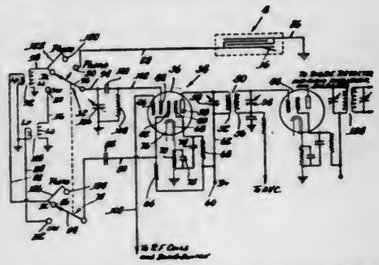
5. In a flatiron construction having a sole plate and a shell mounted thereon with a top surface and side portions, a handle having a generally longitudinally extending grip portion and a pair of integral pedestal portions extending angularly from said grip portion at the ends thereof, means including stud bolts having ends relatively rigidly mounted in bores in said pedestal portions and passing through openings in said shell top surface for mounting said handle on said shell with adjacent surfaces of said pedestal and said shell top surface in spaced relation so as to allow limited movement between said pedestal portions and said shell, and a pair of reverse bent spring clips between said adjacent surfaces of said pedestals and said shell top surface for resiliently biasing said handle pedestal portions to the limit of their movement away from said

shell top surface so that said pedestal portions may be relatively independently moved toward and away from said shell top surface during ironing operation.



2,436,944
ISOMERIZATION OF SATURATED HYDROCARBONS
Robert E. Sutherland, Chicago, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a corporation of Delaware
Application March 31, 1945, Serial No. 585,995
10 Claims. (Cl. 260—683.5)

1. In the catalytic isomerization of saturated hydrocarbons wherein the hydrocarbon is subjected to the action of a metal halide isomerizing catalyst in the presence of a hydrogen halide under isomerizing conditions and wherein sludge formed in the reaction is separated from the remaining reaction products, said saturated hydrocarbon being more volatile than said catalyst, the improvement which comprises introducing said remaining reaction products to a fractional distillation zone and therein fractionally distilling said products to separate an overhead product containing isomerized hydrocarbons formed in the reaction and the hydrogen halide from a liquid bottoms product containing dissolved metal halide, returning at least a portion of said bottoms product to the isomerization step, withdrawing from the fractional distillation zone at a point below that at which said remaining products are introduced, a vapor stream of hydrocarbons lower in metal halide concentration than the liquid in equilibrium therewith and comprising hydrocarbons higher boiling than said saturated hydrocarbon, and recovering said vapor stream.

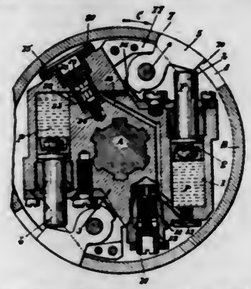


2,436,945
TWO TEMPERATURE ABSORPTION REFRIGERATING APPARATUS AND METHOD
Otis B. Sutton, North Canton, Ohio, assignor to The Hoover Company, North Canton, Ohio, a corporation of Ohio
Application June 10, 1942, Serial No. 446,471
10 Claims. (Cl. 62—118)

1. The method of maintaining a temperature differential in two zones by means of an intermittently operating absorption refrigerating apparatus including an evaporator having coils in heat exchange relationship with said zones and in open communication with a common source of supply of liquid refrigerant supplied by said intermittently operating absorption refrigerating apparatus comprising, the steps of reducing the vapor pressure in the coils of the two zones by operating said intermittently operating absorption refrigerating apparatus on the absorption phase of operation to thereby evaporate liquid refrigerant in the coils of each zone at the same temperature and at a rate depending upon the load on the respective zones, discontinuing the evaporation of liquid refrigerant in the coil of the zone to be maintained at a higher temper-

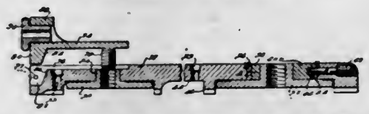
ature while continuing the evaporation of liquid refrigerant in the coil of the zone to be maintained at a lower temperature and maintaining the same vapor pressure in the coils of each zone throughout all of the foregoing steps.

2,436,946
CAPACITY-TYPE PHONOGRAPH PICKUP
Frank B. Tatro, Chicago, Ill., assignor, by mesne assignments, to Virgil A. Hamilton, Chicago, Ill.
Application April 10, 1941, Serial No. 387,792
2 Claims. (Cl. 179—100.41)



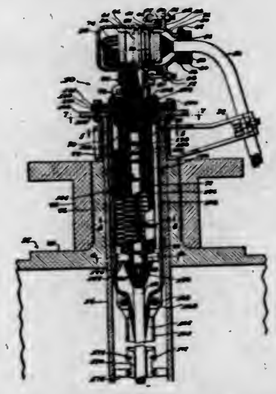
1. A sound record pick-up comprising a supporting bracket of insulating material, a condenser including a stack of flexible, metal plates with dielectric material therebetween, alternate plates having wings at opposite ends, said bracket and wings being slidably interlocked to yieldably mount said plates on said bracket and a record traversing stylus secured to one of said plates to effect approaching and recessive yielding movements of the plates.

2,436,947
OVERLOAD RELEASE CLUTCH
Pierre Louis André Vergne, Saint-Cloud, France, assignor to Société "Elox," Courbevoie, France, a society of France
Application February 2, 1945, Serial No. 575,862
In France November 23, 1943
11 Claims. (Cl. 192—56)



1. A device of the type described which comprises, in combination, two coaxial rotary members adapted to be driven one by the other, at least one clutch pawl movably carried by one of said members for coupling it with the other, said pawl being pivoted to said first mentioned mem-

ber about an axis parallel to the rotation axis thereof so that, in its position of engagement with said second mentioned member, it is urged toward its disengaged position by the torque transmitted through itself from one member to the other, an abutment carried by said first mentioned member for limiting the rotation of said pawl about its axis to its position of engagement with said second mentioned member, spring means for urging said pawl toward said abutment, a hydraulic jack including a cylinder carried by said first mentioned member at right angles to said rotation axis, a piston slidable in

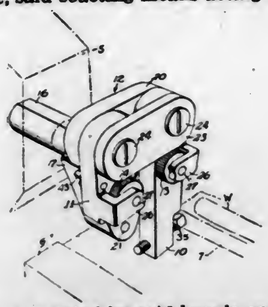


said cylinder, and a rod carried by said piston and in contact with said pawl, said rod being adapted, in the expanded position of said jack to cooperate with said pawl for holding it in engaged position while transmitting, in series therewith, the torque thrust from one member to the other, and a loaded discharge valve for said jack carried by said first mentioned member adapted to open in response to a rise of the liquid pressure in said cylinder above a given value, thus permitting said pawl to be forced into disengaged position by any torque to be transmitted therethrough that exceeds a given value.

2,436,948
MOUNT FOR GUN SIGHTS
Harvey A. Williams, Davison, Mich.
Application July 14, 1945, Serial No. 605,151
11 Claims. (Cl. 33—50)

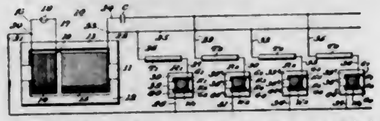
1. A mounting for a telescopic gun sight comprising a mounting plate adapted for attachment to the gun, said plate being formed with a relatively flat top surface, a pair of spaced vertical apertures, and mounting pads adapted to seat solidly on the gun and hold portions of the plate spaced therefrom; a thumb nut disposed with its head portion below the plate and its shank portion mounted for rotation in one of said apertures; a disk rotatably mounted in the other of said apertures and provided with an eccentric opening; a second thumb nut disposed with its head below the plate and its shank rotatably mounted in said eccentric opening; means for holding the disk in a selected adjusted position; a pair of mounting elements adapted to be fastened to the telescope and having heavy base portions formed with flat bottom surfaces; and studs carried by said base portions and adapted to threadedly engage the shank portions of respective thumb nuts and to pull the bottom surfaces of the base portions flatly against the top of the plate, the arrangement being such that the said telescopic sight can be fixedly attached to the mounting plate by manually rotating the thumb nuts in one direction or disengaged from the plate by rotating the thumb nuts in the opposite direction.

2,436,949
SWIVEL ELECTRICAL CONNECTOR WITH FLOATABLE MEANS
Alf E. Anderson, Milton, Mass.
Application July 24, 1943, Serial No. 496,013
7 Claims. (Cl. 173—324)



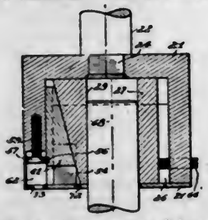
1. In a ship to shore communication system, the combination with a swivel connector and floatable means for supporting the connector in the sea, said connector comprising a relatively stationary contact unit attached to and movable with said supporting means, and a movable contact unit arranged to cooperate with and mounted to rotate with relation to said relatively stationary unit, of a cable detachably connected to the rotatable member of the connector and leading to the ship, and a second cable leading to shore and connected to the stationary member of the connector, and cable clamping means comprising an outrigger bracket mounted to rotate about said floatable supporting means for clamping said detachably connected cable to permit rotation with said rotatable unit, said floating connector serving to permit the ship to drift around the same without interruption of communication from ship to shore.

2,436,950
KNURLING TOOL
Harry Boyar, Oak Park, Ill., assignor to Boyar-Schultz Corporation, Chicago, Ill., a corporation of Illinois
Application January 24, 1945, Serial No. 574,394
10 Claims. (Cl. 80—5.1)



1. A knurling tool comprising, in combination, a supporting element, a pair of levers pivotally mounted on said element in laterally spaced relation and adapted to carry revoluble knurls positioned to engage opposite sides of a workpiece, means for rocking one of said levers about its pivot to feed the knurl carried thereby to the workpiece, and means on said one lever coacting with means on the other lever for simultaneously rocking said other lever by movement of the first

lever to feed the knurl carried thereby to the workpiece, said coacting means acting to equalize



the pressure exerted by said knurls on the workpiece.

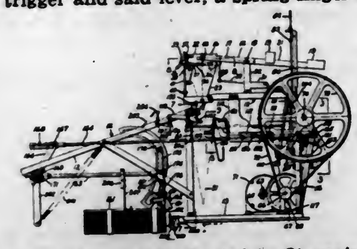
2,436,951
LUMINESCENT TUBE SYSTEM AND APPARATUS
John Herold Bridges, Paterson, N. J., assignor, by mesne assignments, to National Inventions Corporation, a corporation of New Jersey
Application August 12, 1943, Serial No. 498,344
3 Claims. (Cl. 315—257)

1. A gaseous electric discharge tube lighting system, comprising in combination, a transformer; at least four gaseous electric discharge tubes; a connection from one side of said transformer to the one ends of said tubes; two connections from the other side of said transformer, one being connected to the other ends of one half of said number of tubes and the other being connected to the other ends of the other one half of said number of tubes; current-limiting self-inductances corresponding in number to said number of tubes, each of said inductances having a magnetic core with included air-gap, individually connected in series with said tubes; and a condenser connected in series with one of said two output leads for effecting a phase shift with respect to the other of said output leads.

2,436,952
MACHINE TOOL ATTACHMENT
Edward L. Conkey, Seneca Falls, N. Y.
Application March 1, 1945, Serial No. 580,317
2 Claims. (Cl. 279—6)

1. An attachment for a machine tool having a spindle with an axis of rotation, said attachment having a shank adapted for reception in the normal tool holding opening of the machine comprising, in combination, a housing secured to said shank, a tool holder having a bore for the reception of a tool, said tool holder having two adjacent sides which extend in planes at right angles to each other and parallel to the axis of the bore and said tool holder having two other adjacent sides which are planary and inclined with respect to the axis of the bore, a pair of wedge elements each having a wedge surface adapted to cooperate with an inclined side of said tool holder, means for adjusting said wedges to shift the tool holder so that the axis of the bore and the axis of the spindle are in alignment with each other, means extending through the housing for engaging the first two sides of the tool holder and clamping it in an adjusted position, said tool holder having a threaded opening and said housing having an elongated slot, and means extending through said elongated slot and said threaded opening for clamping the shank of a tool in said bore.

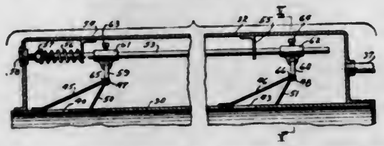
2,436,953
SHOE CLEANING GUARD
Helen Cronin, Cincinnati, Ohio
Application August 13, 1946, Serial No. 690,225
3 Claims. (Cl. 36—72)



2. A shoe cleaning guard comprising an elastic sheet of material, a central opening formed in said sheet for placement of said sheet over a shoe adjacent the juncture of the sole and upper thereof, rigidifying members adjacent said opening to stiffen said guard adjacent the instep portions of said shoe when said guard is placed over said shoe, said guard being adapted to be folded over said sole to guard the same while cleaning the upper of the shoe and to be folded back over the upper when cleaning the sole of said shoe.

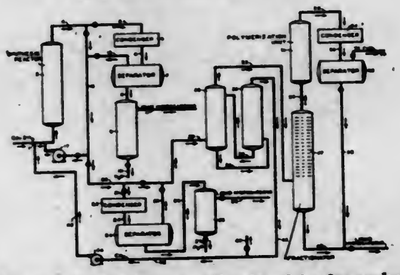
2,436,954
PRINTING INK
Richard A. Denton, Riverton, N. J., assignor to Sun Chemical Corporation, a corporation of Delaware
No Drawing. Application January 29, 1944, Serial No. 520,320
8 Claims. (Cl. 260—7)

1. A printing ink vehicle of the character described which is press stable at normal pressroom temperatures, comprising as essential ingredients in admixture a solvent for the binder which is also water-miscible and which is selected from the group consisting of water-soluble glycols and monoethers thereof, a water precipitatable binder constituent in said solvent, and heat-reacted neutral resinate of an alkylolamine in proportion falling within the range of 5 per cent to 43 per cent of said vehicle.



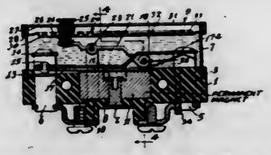
2,436,955
BAG HANDLING MACHINERY
Wesley Dodge, Oakland, Calif., assignor to Paterson Parchment Paper Company, Bristol, Pa., a corporation of New Jersey
Application April 7, 1945, Serial No. 587,157
8 Claims. (Cl. 226—49)

1. A bag engaging unit comprising a pair of spaced T-members, a lever hinged between said members, a T-shaped trigger hinged at one end of the cross bar of the trigger at the end of the stem of the T of said members, a spring between said trigger and said lever, a spring finger on an



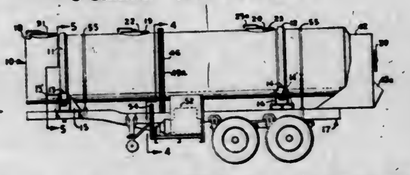
end of said lever and adapted to fit against the bottom of the stem of said T-trigger, and a pair of bag engaging presser feet secured to said T-trigger stem.

2,436,956
SNOWPLOW
Louis Du Pras, Marquette, Mich.
Application July 23, 1945, Serial No. 606,546
10 Claims. (Cl. 37—42)



1. In combination, a snowplow moldboard having a plurality of manifolds mounted in spaced relationship on the rear surface thereof, the face of said moldboard being apertured at places corresponding with the positions of said manifolds to communicate therewith, angularly disposed baffle plate means in said manifolds adjacent said apertures for directing compressed air developed in said manifolds substantially along the faces of said manifolds, and damper means disposed in the path of air flow from said manifolds to said apertures to control the passage of air therethrough.

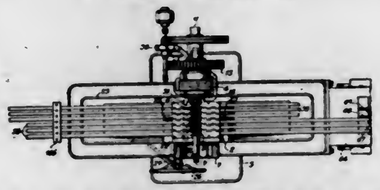
2,436,957
CATALYTIC SYNTHESIS OF HYDROCARBONS WITH CONTROLLED RECYCLE OF CARBON DIOXIDE
Du Bois Eastman, Scarsdale, N. Y., assignor to The Texas Company, New York, N. Y., a corporation of Delaware
Application December 20, 1945, Serial No. 636,226
8 Claims. (Cl. 260—449.6)



6. In the catalytic synthesis of hydrocarbons, oxygenated hydrocarbons and the like, by the reduction of carbon monoxide with hydrogen in a reaction zone under reaction conditions including an elevated temperature, wherein a fresh feed synthesis gas comprising substantial relative proportions of hydrogen and carbon monoxide is contacted with a synthesis catalyst effective under said reaction conditions, the improvement which comprises continuously withdrawing said reaction products from contact with said catalyst after substantial conversion to desired products, subjecting a minor proportion of the normally gaseous products of reaction at least equal in quantity to the net production of normally gaseous reaction products, to treatment for the recovery therefrom of contained carbon dioxide, recycling said carbon dioxide at least in part to said reaction zone and recycling the residual major portion of the normally gaseous products of reaction to the reactor in combination therewith.

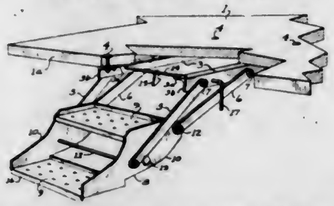
2,436,958
SWITCH
Irwin W. Eisenberg, Alhambra, Calif.
Application January 31, 1944, Serial No. 520,378
1 Claim. (Cl. 200—168)

In a device of the class described, a closed liquid filled casing having a switch member therein mounted for movement in response to a predetermined force, said casing having an actuating diaphragm portion, means operatively connecting said diaphragm portion with the said switch member to move the same upon flexing of the said diaphragm portion, a second diaphragm portion being so positioned that flexing thereof will not directly effect movement of said switch member and being sufficiently flexible to flex under a force less than said predetermined force whereby it will flex under forces induced by contraction of said liquid before sufficient force is induced to move said switch member.



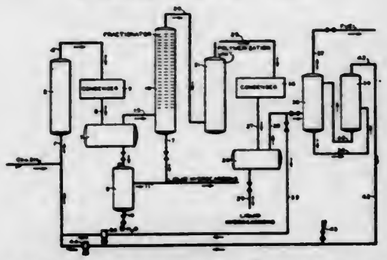
2,436,959
VEHICLE TRANSPORTING MEANS
Hursel L. Ekin, Galion, and Joseph O. Young, Rocky River, Ohio, assignors to The Galion Metallic Vault Company, Galion, Ohio, a corporation of Ohio
Application June 17, 1946, Serial No. 677,378
3 Claims. (Cl. 214—83.32)

1. In combination, a container, inlet means distributed over the length of said container to allow filling of the latter, one end of said container being cone shaped and comprising outlet means for discharging the material from said container, chute means adjacent said outlet means, closure means operable selectively for



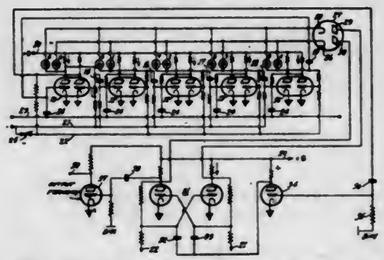
opening and closing said outlet means, conveying blades connected to the inside of said container and operable to convey material to said outlet means, supporting means for rotatably supporting said container and rotating means associated with said container for rotating the latter to thereby actuate said conveying blades, said rotating means including sprocket means, a chain passing over said sprocket means, and gear segments engaged by said chain and mounted on the outside of said container.

2,436,960
APPARATUS FOR MILLING
Paul H. Fassnacht, West Nyack, N. Y., assignor to Precision Shapes, Inc., New York, N. Y., a corporation of New York
Application June 17, 1943, Serial No. 491,157
11 Claims. (Cl. 90—18)



11. In an apparatus for milling, in combination, a cutter, a jig for guiding the work in a path, said jig having an aperture to admit the cutter to the work and said cutter substantially closing the aperture when in operative position, means to advance the work through the jig, said jig including means substantially enclosing the work on one side of said path with respect to the cutter and gripping the work under tension at the cutter.

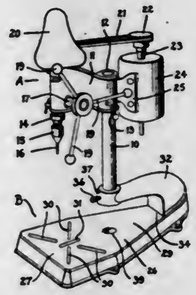
2,436,961
RETRACTABLE VEHICLE STEP
Christopher K. Gabriel, Portland, Oreg.
Application May 24, 1944, Serial No. 537,115
4 Claims. (Cl. 280—166)



1. A retractable step structure for a vehicle comprising a pair of rails adapted to be secured in spaced relation to an undersurface of said vehicle, pairs of spaced, elongated arms pendently supported from each of said rails, an integral bucket-like step pivotally secured between said pairs of arms and adapted to be swung from an extended position beyond the ends of said rails to a retracted position closely beneath the latter, a stop member projecting laterally from one of said sides and positioned to be engaged on one face by one of said arms when said step is swung to extended position, the other arm of said pair, not engaged by said stop, being straight and extending substantially in a line passing through the engaging face of said stop and the pivot connection of said engaging arm with said step, when the step is in extended position, to brace and hold said step against retraction.

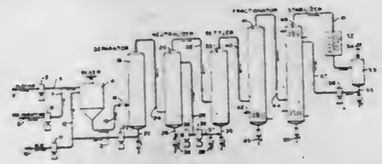
2,436,962
CATALYTIC PROCESS FOR THE SYNTHESIS OF HYDROCARBONS AND THE LIKE FROM HYDROGEN AND THE OXIDES OF CARBON
Leon P. Gaucher, Mount Vernon, N. Y., assignor to The Texas Company, New York, N. Y., a corporation of Delaware
Application December 6, 1945, Serial No. 633,248
5 Claims. (Cl. 260—449.6)

1. In the catalytic conversion of carbon monoxide and hydrogen into hydrocarbons, oxygenated hydrocarbons and the like, the method which comprises contacting a mixture of carbon monoxide and hydrogen with a catalyst in a reaction zone, effecting catalytic conversion of said carbon monoxide and hydrogen into hydrocarbons, oxygenated hydrocarbons and the like under suitable conditions of temperature and pressure, obtaining an effluent from said reaction zone comprising normally gaseous and liquid hydrocarbons, steam, carbon dioxide and unreacted carbon monoxide and hydrogen, separating normally gaseous components of said effluent from the normally liquid hydrocarbons and water, polymerizing olefins present in said separated gases by contact with a suitable catalyst, thereby forming liquid hydrocarbons, separating the residual gases from said liquid hydrocarbons, dividing said residual gases, comprising normally gaseous hydrocarbons, carbon monoxide, hydrogen and carbon dioxide into a minor portion and a major portion, recycling said major portion directly to said reaction zone, separating carbon dioxide from the minor portion and recycling said carbon dioxide to reaction zone.



2,436,963
ELECTRONIC COUNTING CHAIN WITH DECIMAL INDICATORS
Igor E. Grosdoff, Princeton, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application February 26, 1944, Serial No. 523,968
3 Claims. (Cl. 235—92)

1. The combination of a plurality of trigger units coupled together to form a closed loop and each having a pair of electron discharge



elements, a pair of diode elements, switching means connected to apply different potentials to the anodes of said diodes, a plurality of indicators arranged in pairs each of which pairs has one pair of its terminals connected together to one anode of a different trigger unit and has the other pair of its terminals connected separately to the cathodes of said diode elements, and means responsive to completion of the operating cycle of said loop for operating said switching means to interchange the potentials of the anodes of said diodes.

2,436,964
DRILL PRESS
Robert McFall Jones, Bellevue, Nebr., assignor to Ralph Wilson Jones, Sr., St. Paul, Minn.
Application September 11, 1944, Serial No. 553,557
1 Claim. (Cl. 77—19)

A drill press comprising a base, an arm having one end secured to said base to extend upwardly therefrom, said arm having a free end extending laterally to position the free end laterally spaced from the end thereof connected to said base, a standard adjustably secured to said free end of said arm, a spindle support extending laterally from said standard, and a socket in said base of a diameter to receive the lower end of said standard in one adjusted position thereof and to hold said standard from lateral movement.

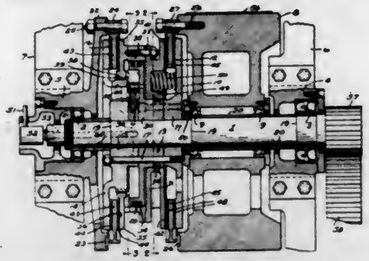
2,436,965
ALKYLATION OF HYDROCARBONS
Karl Korpi and Arthur R. Goldsby, Port Arthur, Tex., assignors, by mesne assignments, to The Texas Company, New York, N. Y., a corporation of Delaware
Application June 18, 1937, Serial No. 148,978
12 Claims. (Cl. 260—683.4)

1. Process of alkylating isoparaffins with olefins which comprises contacting isoparaffin and olefin with sulfuric acid of alkylating concentration, and maintaining a low concentration of alkyl ester initial reaction product corresponding to a gasoline product of unsaturation below about 2%.

6. A process for the alkylation of hydrocarbons, which comprises maintaining a circulating stream of strong sulfuric acid in a closed circuit, introducing into said stream an olefin and a low-boiling isoparaffin in such amounts that a molar excess of isoparaffin to olefin is maintained in the mixture and alkylating conditions are maintained, whereby isoparaffin is alkylated by the olefin, withdrawing reaction products from said stream and separating from the products withdrawn the alkylated hydrocarbons.

2,436,966
PHOTOGRAPHIC EXPOSURE METER
Joseph Antoine Legris, Toronto, Ontario, Canada
Application October 1, 1945, Serial No. 619,463
20 Claims. (Cl. 235—64.7)

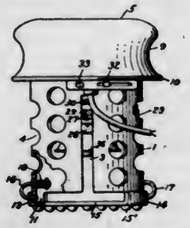
1. A photographic exposure meter, comprising a base member having a plurality of groups of indications arranged thereon; a rotatable disc mounted on said base member and having a group of indications arranged thereon to register with one of said groups of indications on the base and being provided with a series of spaced apart indicating tables; a second rotatable disc mounted over the face of the first rotatable disc and having indications arranged thereon to register with another group of indications on said base, said second rotatable disc being slotted in order to expose the tables on the first disc.



2,436,967
POLYMERIZATION OF SUGARS
Gerald J. Leuck, Brooklyn, N. Y., assignor to Corn Products Refining Company, New York, N. Y., a corporation of New Jersey
No Drawing. Original application April 1, 1942, Serial No. 437,273. Divided and this application April 26, 1945, Serial No. 590,499
13 Claims. (Cl. 260—209)

1. The process of polymerizing sugars which comprises reducing the sugar to a molten state and heating the same under substantialy anhydrous conditions in contact with superheated steam, as a catalyst.

2,436,968
COMBINED CLUTCH AND BRAKE
William F. Longfield, Cleveland, Ohio, assignor to The Cleveland Punch & Shear Works Company, Cleveland, Ohio, a corporation of Ohio
Application July 31, 1945, Serial No. 607,990
5 Claims. (Cl. 192—18)

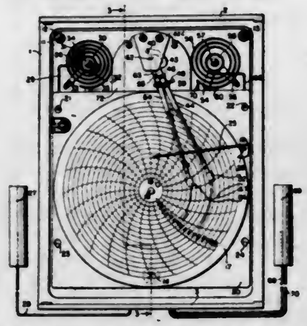


1. In a device of the character described the combination of a rotatably supported shaft, a flywheel rotatably mounted upon said shaft, a stationary support spaced from said flywheel, a hub rigidly secured to said shaft between said flywheel and said stationary support, a clutch plate formed integrally with one end of said hub, a brake plate formed integrally with the

other end of said hub, a piston formed integrally with said hub intermediate said clutch plate and said brake plate, a cylinder slidably but non-rotatably mounted upon said piston, a clutch clamping plate rigidly secured to one end of said cylinder, a brake clamping plate rigidly secured to the other end of said cylinder, a clutch ring disposed between said clutch plate and said

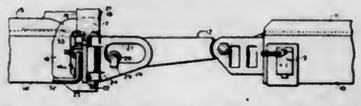
clutch clamping plate and connected to said flywheel for rotation therewith, a brake ring disposed between said brake plate and said brake clamping plate, and non-rotatably secured to said stationary support, spring means operative to clamp said brake ring between said brake plate and said brake clamping plate, and fluid pressure means operative to clamp said clutch ring between said clutch plate and said clutch clamping plate.

2,436,969
NONVIBRATORY MASSAGING DEVICE
Amos R. Marty, Marion, Ohio
Application March 4, 1946, Serial No. 651,839
2 Claims. (Cl. 128—24.1)



1. A massaging device comprising a hollow body open at one end; a hand grip closing the other end of said body; a skirt on said hand grip extending beyond the diameter of said body; a massaging member having an unobstructed central opening therethrough; and a thermo-electric element within said body and located coaxially with the opening in said massaging member.

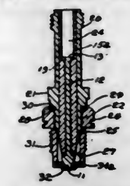
2,436,970
FERROUS METAL SUPPORTED ZINC OXIDE-BISMUTH OXIDE CATALYST
Vincent F. Mistretta, Fanwood, N. J., assignor to Standard Oil Development Company, a corporation of Delaware
No Drawing. Application December 28, 1944, Serial No. 570,211
6 Claims. (Cl. 252—214)



1. As a composition of matter, a catalyst bonded on a ferrous metal support by an oxide of iron, said catalyst being a mixture consisting of zinc oxide and 1–6% of bismuth oxide based on the weight of zinc oxide and said catalyst mixture being 3 to 6% by weight of said support.

2,436,971
MEASURING INSTRUMENT CHART PLATE SUPPORT
Coleman B. Moore, Carroll Park, Pa., assignor to The Brown Instrument Company, Philadelphia, Pa., a corporation of Pennsylvania
Original application December 9, 1939, Serial No. 308,434. Divided and this application March 4, 1944, Serial No. 525,002
4 Claims. (Cl. 234—75)

1. In a measuring instrument having a recording mechanism adapted to make a record of the value of a condition being measured on a chart and means to support the chart, the combination of a plate to back up said chart, said plate having a plurality of openings therein, means to support said plate in position comprising a pair of rigid posts each having a reduced portion formed thereon to receive one of said openings and resilient posts each having a reduced portion thereon to receive another of said openings, the resilient posts acting to maintain each of said reduced portions tightly in the opening received thereby.

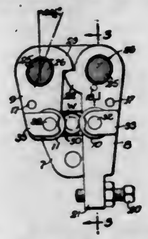


2,436,972
MEANS FOR LOCKING CONTAINERS ON VEHICLES
Ragnar A. Norbom, New York, N. Y., assignor to National Fitch Corporation, a corporation of Delaware
Application September 5, 1946, Serial No. 694,967
4 Claims. (Cl. 214—85)

1. The combination of a vehicle adapted to support a demountable container, a device engageable with said vehicle and said container to retain the container on said vehicle, foldable members hinged to a side of said vehicle for supporting one end of a bridge detachably connectable to said vehicle, and means including said members for locking said device in retaining position.

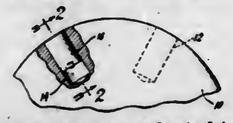
2,436,973
SPARK PLUG
Maurice Pereles, East Orange, N. J.
Application April 10, 1943, Serial No. 482,551
2 Claims. (Cl. 123—169)

2. In a spark plug a one piece electrode having a sparking tip, a contact head and a portion therebetween of reduced diameter threaded or serrated to increase its surface, a ceramic molded on to said electrode and extending from said sparking tip to a point beyond said contact head, the portion of said ceramic beyond said head being solid, said ceramic intimately contacting said threaded or serrated portion, thereby providing



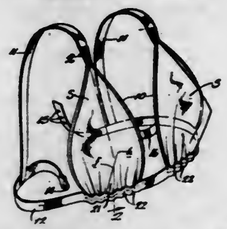
maximum heat transfer relation between said ceramic and said portion, a shell assembled on to said ceramic, and a well formed in said solid portion of said ceramic after assembly, said well extending down to and uncovering said head.

2,436,974
PROCESS FOR PREPARING POTASSIUM STANNATE
Hartmut W. Richter, Rahway, N. J., assignor to Metal & Thermit Corporation, New York, N. Y., a corporation of New Jersey
No Drawing. Application May 2, 1944, Serial No. 533,805
3 Claims. (Cl. 23—53)



1. The process of preparing potassium stannate which comprises adding to an impure tin compound an amount of caustic potash in the presence of a sufficient amount of water to form at least a colloidal solution of the tin values, the amounts of caustic potash and water being sufficient at least to produce such solution but insufficient to completely combine with the tin values present to form potassium stannate, the impurities present in the tin compound being left undissolved in the colloidal solution and physically separable therefrom, separating said impurities from the solution, adding a sufficient further amount of caustic potash such as to completely combine with the tin values to form potassium stannate.

2,436,975
KNURLING TOOL
Albert R. Ross, Western Springs, Ill., assignor to Boyar-Schultz Corporation, Chicago, Ill., a corporation of Illinois
Application January 24, 1945, Serial No. 574,393
6 Claims. (Cl. 80—5.1)



1. In a knurling tool, in combination, a rigid body, a pair of elongated levers pivotally mounted on said body at one end and spaced apart at their other or free ends to straddle a cylindrical workpiece, means adjacent the free end of each lever for supporting a revoluble knurl, means interconnecting said levers for conjoint swinging movement about their respective pivots to move the free ends of the levers toward or from the workpiece, and means on said body coacting with means on said levers for bodily adjusting said levers along their length and transversely relative to their pivotal axes during the swinging movement of the levers so as to maintain the knurl supporting means of both levers centered on a straight line intersecting the axis of the workpiece.

2,436,976
BOWLING BALL
Bernard J. Seurynck, Detroit, Mich.
Application April 29, 1944, Serial No. 533,343
1 Claim. (Cl. 273—63)

A finger receiving sleeve adapted to be inserted within the radial opening of a bowling ball, said sleeve having an end portion provided with a plurality of radial guide ways, ball engaging elements radially slidably mounted within said guide ways, adjustable means extending through the bottom of the sleeve coupled with said elements operable to shift said elements radially outwards.

2,436,977
PROTECTOR FOR NURSING MOTHERS
Marie M. Stevens, Chicago, Ill.
Application December 26, 1945, Serial No. 639,238
2 Claims. (Cl. 2—42)

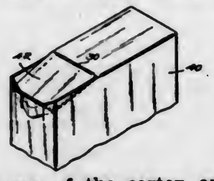
1. A breast protector having a pair of connected approximately triangular shields each having an outward angular crease extending from the top to the bottom of the shield with a second transversely bent crease diverging angularly from the first crease at a point in the medial region of the shield, the triangular area between the two creases in response to inward folding having overlapped portions forming a substantially triangular plait, and means located at the bottom of the shield for contracting the same and producing an outward cupping of the shield with its outermost point substantially at the juncture of the two creases.

2,436,978
REINFORCING CORD AND PROCESS OF MANUFACTURE
George P. Standley, Cleveland Heights, and Kenneth M. McLellan, Cleveland, Ohio, assignors to Industrial Rayon Corporation, Cleveland, Ohio, a corporation of Delaware
No Drawing. Application July 26, 1944, Serial No. 546,750
21 Claims. (Cl. 57—140)

1. The method of producing a tire cord having a denier of at least 500 which comprises treating

a filamentary material with a composition comprising an ester of a fatty acid containing at least 12 carbon atoms with a polyhydric alcohol selected from the group consisting of hexahydric alcohols and the anhydro-derivatives of such alcohols; and thereafter twisting said treated filamentary material at least about 1.5 turns per inch to form said cord.

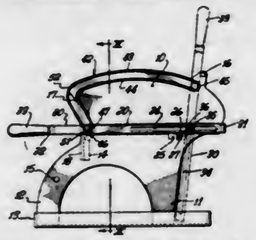
2,436,979
TIRE CORD AND METHOD OF MANUFACTURE
George P. Standley, Cleveland Heights, and Kenneth M. McLellan, Cleveland, Ohio, assignors to Industrial Rayon Corporation, Cleveland, Ohio, a corporation of Delaware
No Drawing. Application January 1, 1945, Serial No. 571,026
14 Claims. (Cl. 57—140)



1. The method of producing a tire cord having a denier of at least 500 which comprises treating a filamentary material with a composition comprising (*a*) an oil selected from the group consisting of vegetable, marine and mineral oils, and (*b*) an ester of a fatty acid containing at least 12 carbon atoms with a polyhydric alcohol selected from the group consisting of hexahydric alcohols and the anhydro-derivatives of such alcohols; said oil being present in said composition in a concentration of at least 5% of the aggregate weight of said oil and ester; said ester component (*b*) having a melting point of at least about 30° C.; said filamentary material being treated so that it contains about 0.1% to 4.5%, by weight, of said composition based on the weight of said filamentary material; and thereafter twisting said treated filamentary material at least 1.5 turns per inch to form said cord.

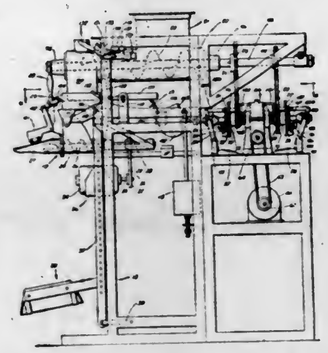
2,436,980
TIRE CORD AND METHOD OF MANUFACTURE
George P. Standley, Cleveland Heights, and Kenneth M. McLellan, Cleveland, Ohio, assignors to Industrial Rayon Corporation, Cleveland, Ohio, a corporation of Delaware
No Drawing. Application January 1, 1945, Serial No. 571,027
18 Claims. (Cl. 57—140)

1. The method of producing a tire cord having a denier of at least 500 which comprises treating a filamentary material with a composition comprising (*a*) a compound selected from the group consisting of sulphated and sulphonated derivatives of mineral oils, vegetable oils, marine oils, higher fatty acids and higher fatty alcohols, said acids and alcohols containing at least 12 carbon atoms, and (*b*) an ester of a fatty acid containing at least 12 carbon atoms with a polyhydric alcohol selected from the group consisting of hexahydric alcohols and the anhydro derivatives of such alcohols; and thereafter twisting said treated filamentary material to form said tire cord.



2,436,981
POURING CARTON
John J. Sullivan, Arlington, Mass., assignor of one-half to Lawrie L. Witter, Boston, Mass.
Application October 5, 1944, Serial No. 557,275
1 Claim. (Cl. 229—17)

A rectangular carton having two parallel end walls, two parallel face walls and two parallel edge walls and perforated along two parallel lines extending from two spaced points at opposite sides of one end wall along the junction of said wall with the adjacent face walls to one edge wall and extending from thence across said edge wall away from said end wall and converging to a mid-point located substantially mid-way of said edge wall, the carton being adapted to be opened along said perforated lines to provide a closure flap disposed within and between the lines and pivotally attached to said end wall along a line connecting said spaced points, said edge wall being cut to provide two slits spaced from and at opposite sides of said mid-point and respectively intersecting said perforated lines at points located intermediately of said mid-point and the

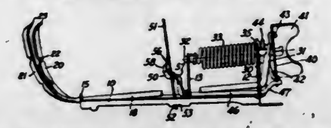


adjacent corners of the carton and extending therefrom in a direction away from said end wall, said closure flap including a V-shaped free end portion terminating in a finger gripping apex and the slits being adapted to receive and frictionally grip the V-margins of said free end portion and permit closing movement of the closure flap inwardly of the carton and in frictional contact with the two face walls and said edge wall whereby providing and maintaining complete and tight reclosure of the carton about the entire margin of the closure flap and the adjacent walls of the opening.

2,436,982
FOOD SLICER WITH SWINGING PLURAL SPACED KNIVES
Carl E. Turnquist, San Gabriel, Calif.
Application January 22, 1945, Serial No. 573,908
4 Claims. (Cl. 146—147)

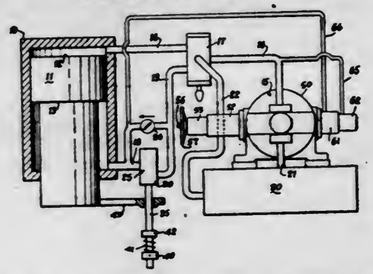
3. A fruit slicer comprising: a receptacle mounted upon legs, said receptacle comprising a bottom consisting of a plurality of parallel, longitudinally entending, spaced shear strips, upstanding sides, a front comprising a plurality of upwardly extending, spaced pickets in alignment with the shear strips, and a normally open back; a frame provided with a plurality of knife blades extending between said shear strips, said knife frame and blades having a sliding pivot connection with the receptacle adjacent the rear portion thereof and in the plane of the bottom, said frame and blades being jointly movable from a substantially vertical position wherein the blades form a back for the receptacle to a horizontal position in which the blades are in the slots between the shear strips and combine therewith to form a substantially solid, smooth-surfaced bottom for the receptacle whereby sliced fruit resting upon said bottom may be discharged from the receptacle through the now open back.

2,436,983
DEVICE FOR SIMULTANEOUSLY FILLING AND WEIGHING BAGS
Edrie W. Vredenburg, Berkeley, Calif.
Application April 7, 1945, Serial No. 587,184
2 Claims. (Cl. 249—63)



2. A bag filling device comprising a weighing frame movable between an unloaded position and a container loaded position, a first and a second switch each actuatable upon movement of said frame from said unloaded to said loaded position, a stationary hopper, a screw conveyor flight in said hopper on a first shaft for discharging material from said hopper, a second shaft, a first drive means for driving the first shaft from the second shaft at a first speed, a second drive means for driving the first shaft from the second shaft at a second speed less than said first speed, a first clutch associated with said first drive means and normally engaged to drive said first shaft at said first speed, a second clutch associated with said second drive means and including an over-running pawl rendering said second clutch ineffective while said first drive means is effective to drive said first shaft at said first speed and cause over-running of said over-running pawl, a first solenoid in a first circuit with said first switch for controlling operation of said first clutch, and a second solenoid in a second circuit with said second switch for controlling operation of said second clutch.

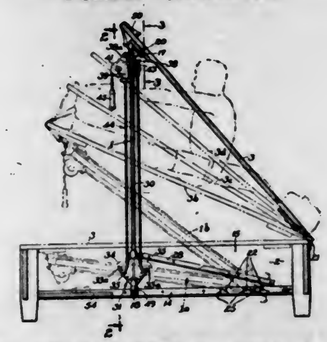
2,436,984
ELECTRICAL CABLE
Arthur L. Wilson, Brentwood, Calif.
Application March 13, 1944, Serial No. 526,201
2 Claims. (Cl. 174—40)



1. A binding means for holding a bundle of wires in cable form, comprising: a plurality of bands of plastic material wrapped around said bundle of wires at spaced intervals and subjected to pressure to form an intimate bond therewith, and hanger elements extending from at least some of the bands to facilitate mounting said cable, said bands forming an insulation means isolating said elements from said wires.

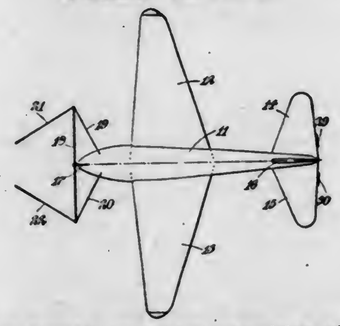
2,436,985
GOPHER TRAP
James M. Abeel, Sebastopol, Calif.
Application February 19, 1946, Serial No. 648,619
6 Claims. (Cl. 43—91)

1. In an animal trap having a base member, a pair of shafts journaled to said base member, impaling members carried by said shafts, a rotatable member operably connected to said shafts whereby upon rotation of said member in one direction said shafts are operated in opposite directions, a plurality of notches formed in said member, a rod journaled to said base, an arm secured to said rod and engageable in any one of said notches, a second arm secured to said rod, a trigger member adapted to engage said second arm, and a setting mechanism comprising spring means adapted to urge said first named arm into engagement with said notches and to urge said trigger forwardly against said second named arm whereby when said trap is being set the trigger is maintained in engagement with said second named arm and said first named arm is urged into engagement with said notches.



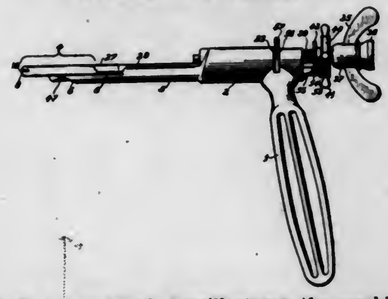
2,436,986
VALVE ARRANGEMENT FOR HALTING REVERSIBLE RAMS TO PREVENT OVERSTROKING THEREOF
Bernard D. Ashbaugh, Mount Gilead, Ohio, assignor to H-P-M Development Corporation, Wilmington, Del., a corporation of Delaware
Application March 6, 1944, Serial No. 525,193
3 Claims. (Cl. 60—52)

2. In a hydraulic system, a reciprocable ram means having a larger advancing area and a smaller retraction area, a variable delivery pump for supplying actuating fluid to said areas for reciprocating the ram, a reversing means, said reversing means being selectively operable to direct the discharge of the pump to the advancing area or to the retraction area while simultaneously connecting the other of said areas to exhaust, a first fluid operable servomotor associated with said pump and having an effective area hydraulically connected with the outlet of said pump and operable in response to a predetermined pressure therein to move said pump into substantially no delivery position, a second fluid operable servomotor associated with said pump and having an effective area substantially larger than that of said first servomotor hydraulically connected with said retraction area and operable in response to a predetermined pressure therein



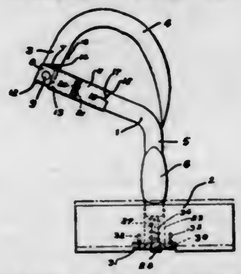
substantially smaller than the first mentioned predetermined pressure to move said pump into substantially no delivery position, a valve hydraulically connected with said retraction area and said reversing means and operable by said ram in response to a predetermined advancing movement thereof to interrupt the flow of fluid from said retraction area to said reversing means to create pressure in said retraction area, and means by-passing said hydraulically connected valve for permitting the flow of fluid from said reversing means to said retraction area only.

2,436,987
EXERCISING APPARATUS
Paul A. Bailleaux, Glendale, Calif.
Application October 2, 1944, Serial No. 556,772
4 Claims. (Cl. 272—81)



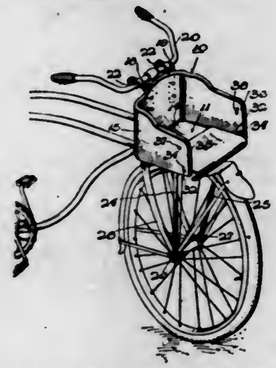
1. In exercise apparatus, means forming a base, a chest weight mechanism including a frame supported on the base, and a member pivotally secured to the base and adapted to engage the upper end of said frame, said member and said frame cooperating to support each other with their engaged ends spaced above the base, whereby said member is inclined upwardly from its pivoted end, providing an exercise table.

2,436,988
TOWED AIRCRAFT AND MEANS FOR TOWING THE SAME
Charles Stanley Bell, Oakley, near Aylesbury, England
Application December 20, 1944, Serial No. 569,030
In Great Britain April 20, 1943
Section 1, Public Law 690, August 8, 1946
Patent expires April 20, 1963
6 Claims. (Cl. 244—3)



1. An aircraft for towing comprising wings of substantially symmetrical surface about the planes in which the front and rear edges of the wings lie, elevator means set at such an angle of incidence as to trim the main planes to an angle of incidence where their lift is less than the weight of the glider and means in front of and above the leading edges of the wings for attachment of crow's-foot connections for a towing cable, the said means being located symmetrically on opposite sides of the vertical central plane of the machine.

2,436,989
TONSILLECTOME
Oscar C. Daniels, Sr., Oriental, N. C.
Application May 29, 1947, Serial No. 751,252
6 Claims. (Cl. 128—309)

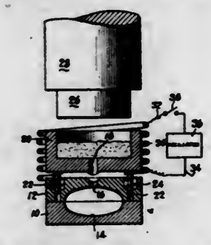


1. In a hemostatic tonsillectome, the combination with a frame for insertion in the oral cavity comprising a shaft carrying at its outer end an enlargement and at its inner end a flat transverse head provided with an aperture, said frame being slotted longitudinally on its upper side, a marginal rail surrounding the end of the head and extending at the sides thereof and provided with undercut guide ways, of a push rod lying in said frame slot having a hemostat plate located between the rail sides which is provided with a slot extending rearwardly from its forward end in the plane of the rail guide ways, an operating rod underlying the push rod in the frame slot, a knife blade lying in the slot of said plate with its edges engaging the rail guide ways and attached to the operating rod, and means at the outer end of the frame for advancing and retracting said rods on the frame.

2,436,990
CARGO HOOK
Louis H. Darling, Vallejo, Calif., assignor to Fol-Gaf Limited, a partnership composed of Robert H. Allen, Lathrop, and Peter J. Wallace, Stockton, Calif.
Application March 11, 1946, Serial No. 653,538
4 Claims. (Cl. 294—26)

1. In a foldable cargo hook, a shank comprising a handle portion, bent laterally intermediate its length to provide a substantially straight end portion-attached section and a handle-carrying section, and an end portion having a handle portion-attaching, substantially straight end section, and an arcuate, bill-carrying section, means pivoting said portions together at the end of each of said straight sections so that when said hook is folded the point of said bill will contact said handle portion at the bend thereof, and the longitudinal axes of said straight sections will form substantially a right angle.

2,436,991
COMBINATION BICYCLE SEAT AND LUGGAGE CARRIER
Ole A. Dirksen, Spencer, Iowa
Application August 19, 1946, Serial No. 691,565
6 Claims. (Cl. 224—31)

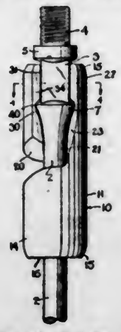


1. A convertible carrier attachment for cycles comprising a flat bottom plate designed to provide a seat, said bottom plate having a straight front edge, a wall around the bottom from the front edge and a front wall pivotally mounted adjacent the bottom edge thereof in side portions of said first-mentioned wall, which portions extend beyond the front edge of said bottom plate, whereby said front wall may be raised from a position of rest on the bottom plate to an erect substantially vertical plane with respect to said bottom plate and in front of said front edge of the said plate.

2,436,992
SOLENOID WITH PLUNGER
Walter Ernst, Mount Gilead, Ohio, assignor to H-P-M Development Corporation, Wilmington, Del., a corporation of Delaware
Application June 16, 1944, Serial No. 540,724
4 Claims. (Cl. 175—341)

1. In combination with a member reciprocable between end positions wherein it is subject to friction tending to retain it in said end positions; an actuating device comprising an electromagnet having an armature movable therein and connected with said member and operable when said electromagnet is energized to move said member in one direction into one of said end positions, a fixed abutment, a first spring means bearing between said member and said abutment and adapted continuously to urge the said member in the other direction, a second abutment carried by said member and movable relative thereto and positioned between said member and said fixed abutment, and a second spring bearing between said member and said second abutment, said abutments being adapted for engagement during movement of said member toward said one end position whereby the movement of said member by said armature is opposed first by said first spring and then by both of said springs, said actuating device being characterized by a force curve which increases in magnitude as said armature is moved by the energization of said electromagnet.

2,436,993
APPARATUS FOR INJECTION MOLDING
John R. Fisher, Jr., Dayton, Ohio, assignor to H-P-M Development Corporation, Wilmington, Del., a corporation of Delaware
Application August 4, 1945, Serial No. 608,904
4 Claims. (Cl. 18—30)



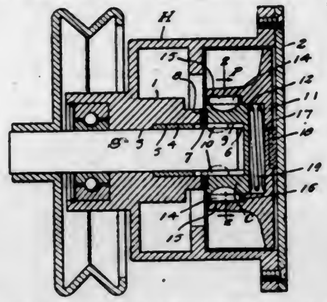
1. An apparatus for molding material which becomes plastic when heated comprising; a multi-part die having a cavity and a transverse parting plane; an electrically conductive container; means for yieldably supporting and spacing said container on said die comprising a plurality of bores in said die, springs in said bores engaging the under side of said container and pins carried by said container extending into said bores; means for heating the material to molding temperature comprising an induction coil about the container for heating the container and therethrough the material; a restricted passage in said container and a passage aligned therewith in said die for permitting the flow of material from the former to the latter; a single pressing plunger operable in one stroke to clamp the die together, to move the container against the die, to transfer the material into the die cavity, and to exert pressure on the material within the die cavity, the material pressing area of said plunger being greater than the projected area of said cavity for maintaining a clamping thrust on said die throughout a pressing cycle; and a shoulder on said plunger to engage said container and therethrough positively to hold said die clamped at the end of a working stroke of the plunger.

2,436,994
SUCKER ROD GUIDE
J. W. Gillespie, Henderson, Tex.
Application August 24, 1944, Serial No. 551,039
6 Claims. (Cl. 308—4)

1. A sucker rod guide comprising an integral body of material, a slot along the axis of the body, said slot being of an inverted bell shape to have a portion open out through the body for one half of the block, another portion open out

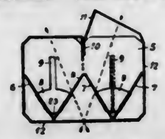
through an opposite side for the other half of the body and having an inclined portion joining the two first portions so that the body may be tilted and moved laterally to pass said inclined slot portion over the rod and the body then

turned to pass the first two portions over the rod to lock the guide to the rod so long as the guide is retained in a pipe, one of said slots being shaped to interfit a portion of the rod to hold the guide fixed on the rod.



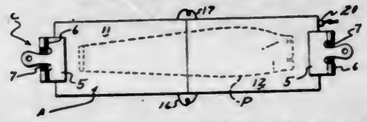
2,436,995
ILLUMINATING DEVICE
James Drummond Hamilton, Winnipeg, Manitoba, Canada
Application October 6, 1944, Serial No. 557,411
3 Claims. (Cl. 67—55)

1. An illuminating device comprising a base having a laterally extending peripheral shoulder thereon, an outer ornamental casing seated on the shoulder, the portion of the base above the shoulder extending into and engaging the inner surface of the casing whereby the latter is supported on the base in manually detachable relation therewith, a container for combustible fluid within the casing, a wick extending from the container and beyond the casing, and exchangeable means for supporting the container in spaced relation to the base, said means being unconnected to the base and container.



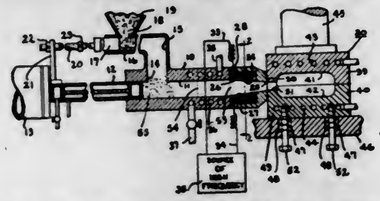
2,436,996
SEALED DRIVING BUSHING
Walter M. Howser, Indianapolis, Ind.
Application December 11, 1944, Serial No. 567,673
7 Claims. (Cl. 103—103)

1. A mounting for an impeller upon its shaft comprising a cupped bearing slidably mounted on an extremity of the shaft, means for holding said bearing on the shaft for rotation therewith, means for slidably mounting the impeller on the bearing but held thereto for rotation



therewith, and means coacting with the impeller and the bearing for placing the bearing under tension to resist the thrust imposed upon the impeller.

2,436,997
CARDBOARD BOX FOR EGGS
Peter Emil Vilhelm Jacobsen, Copenhagen, Denmark
Application September 10, 1938, Serial No. 229,247
In Denmark September 18, 1937
Section 3, Public Law 690, August 8, 1946
Patent expires September 18, 1957
2 Claims. (Cl. 229—29)

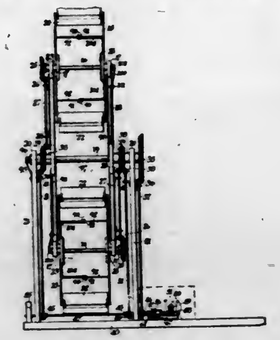


1. In a cellular carton having bottom and opposite side walls and hinged cover means, a plurality of compartment-forming transverse partitions, a sector-shaped cut-out adjacent the bottom of each of said partitions, a slit extending upwardly from said cut-out, a longitudinal V-shaped partition foldable along its apex to form a trough adapted to be inserted through said slit when in folded condition, and a plurality of slits in said V-shaped partition for engaging said transverse walls and said sector-shaped cut-out when said V-shaped partition is unfolded.

2,436,998
PORTABLE FOLDING ELECTRIC CLOTHES PRESSER
Semen Kronhaus, Los Angeles, Calif.
Application November 13, 1944, Serial No. 563,181
1 Claim. (Cl. 219—19)

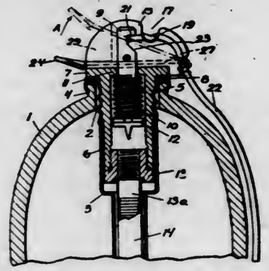
A pressing device comprising a pair of complemental plates adapted to receive therebetween a garment to be pressed, each of said plates consisting of a pair of sections disposed end to end and secured together at their adjacent end edges by a hinge joint allowing swinging movement of each of the sections from their plane-surface-conforming position only towards the opposite section of the opposite plate, and clamp means urging said plates towards each other, each of said sections being hollow and carrying at its interior an electric heating element, the heating elements of said sections being conductively connected together at the hinged joint.

2,436,999
METHOD AND APPARATUS FOR PLASTIC INJECTION
Howard F. MacMillin, Walter Ernst, and George A. Waldie, Mount Gilead, Ohio, assignors to H-P-M Development Corporation, a corporation of Delaware
Application April 23, 1943, Serial No. 484,140
8 Claims. (Cl. 18—30)



1. An apparatus for heating and molding plastic material that includes, a heating cylinder, means for feeding measured charges of plastic material to said cylinder, means for advancing the charges of plastic material through the cylinder in predetermined increments, means for producing a field of high frequency in the forward end of said cylinder consisting of a pair of electrodes adapted to be connected to a source of high frequency that are positioned in insulating means within said cylinder, and a discharge opening for said cylinder of large size capable of passing large quantities of plasticized material with minimum resistance to flow when relatively low pressure is applied upon the plastic material within the cylinder.

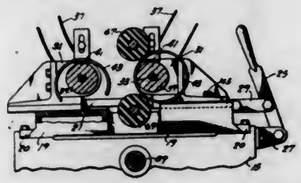
4. A method of heating and molding resins in an injection molding machine that comprises, feeding measured charges of resin substantially equal to the volume of a mold to be filled into the injection cylinder of an injection machine, moving the resin charges through the injection cylinder in increments equal to the volume occupied by the individual charges in the injection cylinder, holding the temperature of the resin in its movement through the injection cylinder to a temperature below a satisfactory plasticizing molding temperature except at the discharge end of the injection cylinder, producing a zone of high frequency energy in the discharge end of the injection cylinder equivalent to the space occupied by a single charge of resin therein to heat the said entire charge simultaneously and uniformly throughout its mass while within the injection cylinder to an elevated plasticizing molding temperature, and discharging the complete said heated charge from the injection cylinder by said incremental movement of all charges therein.



2,437,000
TOY FERRIS WHEEL
Charles L. McBride, Tampa, Fla., assignor to Joy Toys, Inc., Tampa, Fla., a corporation of Florida
Application August 13, 1946, Serial No. 690,152
16 Claims. (Cl. 272—38)

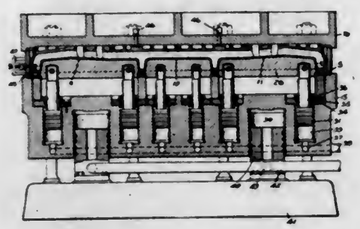
1. An amusement device comprising a standard, a supporting element mounted on said standard for rotatable movement about a horizontal axis, a plurality of supporting members mounted on said supporting element for rotatable movement about horizontal axes, each having carriers pivotally mounted thereon, a motor,

drive means connecting said motor with said supporting element and each of said supporting members to cause them to rotate about their axes, and means for separately disconnecting the drive means for said element and for each of said members.



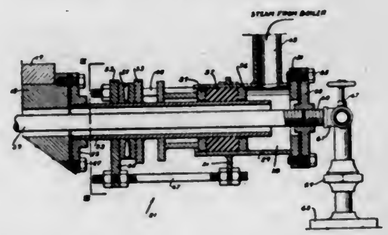
2,437,001
HAND GRENADE
Tor Petersén, Stockholm, Sweden
Application January 21, 1946, Serial No. 642,518
In Sweden July 3, 1944
4 Claims. (Cl. 102—64)

1. A hand grenade of the character described, comprising, in combination, a grenade body having an opening, a head screwed into said opening and having, on top of it, two spaced approximately semi-circular lugs, a spring-pressed striker mounted in said head and having a notched end projecting into the space between said lugs, a throw safety lever which has pivot pins received in notches provided in the edges of said lugs, and which, when in its safety position, has one end engaged with the projecting notched end of the striker to hold the latter in cocked position against its spring, and a fight safety member in the form of a resiliently expansible, approximately rectangular wire loop which, when in its safety position, embraces the projecting lugs adjacent their base and holds the throw safety lever in its safety position, and which has the ends of the wire at one end of the rectangle engaged with the throw safety lever, the wire being formed into a coil at the other end of the rectangle, so that the loop may be swung upwardly around the first end of the rec-



tangle out of its safety position by pressing said coil upwardly by the thumb of the throwing hand, and returned to its safety position by pressing the coil in the opposite direction.

2,437,002
RING GRINDING MACHINE
John H. Riedling, Memphis, Tenn., assignor of one-half to Margaret Wilkerson, Memphis, Tenn.
Application January 27, 1947, Serial No. 724,611
5 Claims. (Cl. 51—103)

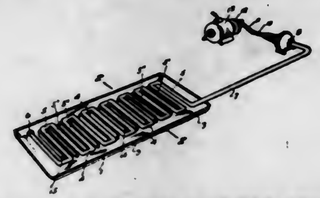


1. A machine for grinding piston rings, including ring grinding means, elastic faced ring rotating means, means for driving said grinding means, means for driving said ring rotating means, dual means for independently supporting groups of rings out of contact with said grinding means, and said driving means, means carrying both said ring-supporting means, and manually operable means for shifting said carrying means to bring rings carried by either one of said supporting means at option into rotating and grinding contact respectively with said rotating and grinding means, and rings carried by the other of said supporting means concurrently away from said contacts and into accessible position for removal of rings from, and placement of additional rings on, said supporting means.

2,437,003
MACHINE FOR MOLDING CONCRETE UNITS
Arthur Ernest Ruegg, Zurich, Switzerland
Application October 21, 1941, Serial No. 415,898
In Switzerland July 27, 1940
Section 3, Public Law 690, August 8, 1946
Patent expires July 27, 1960
5 Claims. (Cl. 25—41)

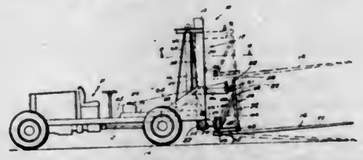
1. An arrangement for making concrete blocks and other units, comprising in combination, a mold including a displaceable cover adapted to close the top of the mold and steel helmets movably inserted into and forming part of its bottom, a hydraulic press including a stationary crosshead adapted to cooperate with said mold cover, a movable press plate adapted to support the bottom of said mold, press heads displaceable relative to said press plate to engage into said steel helmets, and means to displace successively said press plate to press the cover on the mold and said press heads to advance said steel helmets into the mold, means to vibrate at least part of said mold during the pressure operation, suction means and a suction manifold connecting said suction means with openings provided in the walls of said mold, said openings being of a size to permit the air and water eliminated from the concrete mixture in said mold by vibration and pressure to escape from said mold through said openings while the entire mass of concrete is retained in the mold.

2,437,004
STEAM HEAD FOR DRIER DRUMS
William J. Rutledge, Lucy, Tenn.
Application September 9, 1946, Serial No. 695,780
3 Claims. (Cl. 34—124)



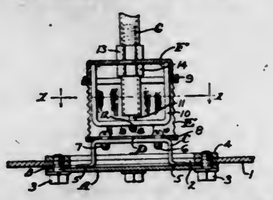
1. In a drier as for paper stock, a hollow drum having a cylindrical barrel and heads, and means, including a hollow trunnion journalling said drum; a tubular cylindrical member open at its outer end, secured to and extending axially from and turning with said trunnion, a steam head including a nonrotatable hollow casing embracing the open end of said tubular member, a stuffing box forming part of said casing embracing said member adjacent its open end and effecting a seal between said member and said casing, a plate rigidly secured to and closing the outer end of said casing, and a steam line leading into said casing; a condensation discharge pipe rigidly secured to said plate and opening therethrough, said pipe extending from said plate axially through said tubular member and said trunnion and within said drum curving downwardly to bring its intake end into adjacency to said drum barrel, said pipe being relatively much smaller than the bore of said tubular member and trunnion to leave an annular space therearound for the passage of steam through said member and for adjustment of alinement of said pipe relatively to said member and trunnion; and means for restraining displacement of said casing from and adjusting angularity of said discharge pipe with respect to said tubular member and adjacency of the intake end of said pipe to said drum, including bolts and anchor means therefor respectively secured to said head and said tubular member, one of said anchor means being rigidly secured to said steam head, and the other thereof including an abutment rigidly attached to said tubular member, a relatively rotary flange and an interposed thrust bearing, said bolts having nuts thereon and extending from said rigidly secured anchor means to said flange, said nuts being adjustable to vary the angularity of said head and said discharge pipe carried thereby with respect to said tubular member, and the adjacency of the intake end of said discharge pipe to the barrel of said drum.

2,437,005
PROCESS FOR THE PRODUCTION OF PRINT PICTURES ON PRINT BODIES
Egon Herbert Schwarz, Zurich, Switzerland
No Drawing. Application June 4, 1941, Serial No. 396,620. In Switzerland May 29, 1940
Section 3, Public Law 690, August 8, 1946
Patent expires May 29, 1960
4 Claims. (Cl. 101—149.2)



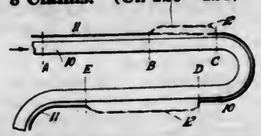
1. A method of producing print pictures on metallic printing surfaces comprising the steps of treating the metallic surface on which the picture is to be produced with a lye, applying to the surface a layer of sensitized emulsion, copying the desired picture on the sensitized surface, developing the picture, and coating the surface carrying the picture with a solution containing a salt of a metal the position of which in the displacement series is below that of the metal of the printing surface, said metal salt being capable of forming an ink receptive metal deposit.

2,437,006
INVALID PAD
William T. Simpson, St. Clairsville, Ohio
Application September 13, 1944, Serial No. 553,878
3 Claims. (Cl. 128—33)



1. A mattress for invalid persons comprising a container, a series of closely spaced expansible tube sections filled with a pressure fluid and arranged substantially at the same level, a pump connected with the expansible tube sections, means for driving the pump, means arranged within said pump for producing periodic pressure variations in said pressure fluid, inflating and deflating the expansible tube sections, and partition walls inserted between said expansible tube sections in said container with their upper edges below the level occupied by the transverse tube sections when inflated during expansion due to pressure increase but at one level with said tube sections when deflated upon pressure decrease to a predetermined extent.

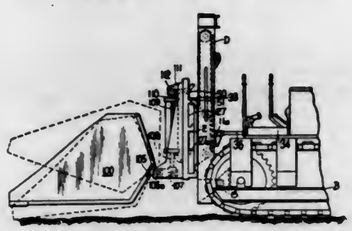
2,437,007
HAYING MACHINE
Phillip Milton Thorns, Clements, Calif.
Application May 4, 1945, Serial No. 591,949
9 Claims. (Cl. 214—113)



1. In a haying machine including a push or buck rake, transport and stacker, comprising a tractor having a front wheel drive, an upright guide frame supported at the front of the tractor, a lift operable in said guide frame, a rake pivotally and slidably mounted at the lower end of the guide frame to extend forwardly therefrom and adapted for limited pivotal and slidable movement up and down at its pivoted end independently of the lift, means on the tractor for raising and lowering the lift in the guide frame, said rake being adapted for tilting movement downwardly and upwardly at its forward end, an upright member on the rake near its pivoted end, releasable means engageable with said upright member to hold the same in a rearwardly tilted position or to release the same to a downwardly and forwardly tilted position, and means cooperative between the upright member of the rake and the upright frame, to retain the rake in any desired elevated position.

2,437,008
OIL FILTER SCREEN
George van Doehren, Fredericksburg, Iowa
Application August 7, 1946, Serial No. 688,944
3 Claims. (Cl. 210—149)

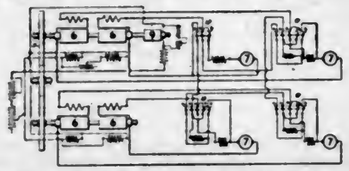
2. For use in the crankcase of an engine having an oil circulating system provided with an inlet tube in the crankcase, a strainer comprising a support having its top elevated above the crankcase bottom, a plate on said support, a tubular screen the lower edge of which rests in a channel-way about the periphery of the upper face of said plate, a cover for said screen having an inverted U-shaped channel-way about the periphery of its under side which receives and rests on the upper edge of said screen and closing the upper end thereof, two U-shaped braces secured to the under side of said cover at 90° intervals and extending downward adjacent to the walls of the tubular screen to different depths within the screen so that one crosses over and within the other thus preventing the inward collapse of said screen caused by the suction pressure of the inlet tube which extends through the cover and terminates within the screen in spaced relationship above the plate.



2,437,009
ILLUMINATED SIGN
Arthur Richard Warner, London N. W. 8, England
Application March 9, 1938, Serial No. 194,772
In Great Britain March 15, 1937
Section 3, Public Law 690, August 8, 1946
Patent expires March 15, 1957
8 Claims. (Cl. 126—124)

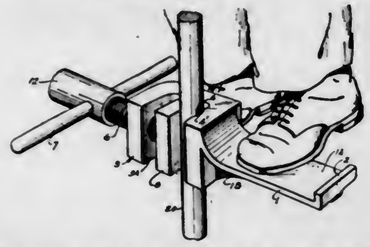
4. An illuminated sign comprising a vapour discharge tube, electrode means for supplying a high frequency alternating current to said tube, and a flexible conducting member effectively connected to one of said electrodes and follow-

ing the convolutions of said tube, said conducting member being adjustable in a direction towards or away from said tube over at least a portion of the length of said tube, and being arranged generally to approach said tube as the distance from said connected electrode increases whilst being arranged more closely to said tube at curved portions thereof.



2,437,010
SHOVEL LOADER
Glenn W. Way, Delaware, Ohio
Application December 29, 1945, Serial No. 638,244
4 Claims. (Cl. 214—113)

1. A scoop attachment for an industrial truck which includes a chassis carrying an upright standard having a lift carriage mounted thereon for vertical movement, comprising a vertically disposed supporting frame adapted to be attached to the carriage, said frame including a plurality of vertically spaced transversely extending cross bars, a plurality of vertically disposed supports having channel-shaped bracket portions at their rear sides which slip over the ends of said cross bars, means for securing said vertically disposed supports in selected positions laterally of said cross bars, each of said vertical supports being provided with forwardly projecting vertically disposed laterally spaced ribs having forwardly projecting pivot lugs on their lower ends, a forwardly directed scoop carried by said frame for movement about a horizontal axis, rocker arms rigidly attached to said scoop and extending rearwardly therefrom, said rocker arms extending between said ribs on said vertical supports, pivot pins extending through pivot openings in said lugs and through cooperating openings formed in said rocker arms intermediate their ends, means for controlling movement of the scoop about said pivot pins, said means comprising a vertically disposed fluid cylinder and piston unit carried by each of said vertical supports between the ribs formed thereon, hanger means for pivotally suspending the upper end of each of said units from the upper end of the associated support, and means for pivotally connecting the lower end of said fluid unit to the rear end of the associated rocker arm.

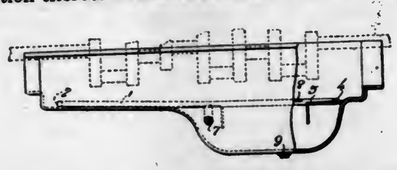


2,437,011
GAS TURBOELECTRIC LOCOMOTIVE
Heinrich Weier, Ennetbaden, Switzerland, assignor to Aktiengesellschaft Brown, Boveri & Cie, Baden, Switzerland
Application March 8, 1945, Serial No. 581,683
In Switzerland February 3, 1944
Section 1, Public Law 690, August 8, 1946
Patent expires February 3, 1964
6 Claims. (Cl. 290—14)

1. Gas turbine locomotive comprising a gas turbine driving a compressor, a plurality of traction motors, a plurality of generators driven from said gas turbine over gearing, circuit means arranging said generators to supply power to said motors for driving said locomotive, and means rearranging at least one of said generators to

function as an exciter for said motors during regenerative braking operation of said locomotive, the remainder of said generators at such time operating as motors for driving said compressor.

2,437,012
SUPPORTING STEP
Raymond J. White, Longview, Tex.
Application August 13, 1946, Serial No. 690,237
2 Claims. (Cl. 304—28)

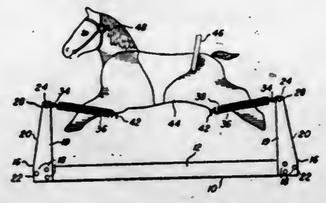


2. A detachable supporting device for attachment to a vertical polish rod of oil well pumping equipment comprising an elongated foot supporting step having a flanged outer edge, said step having a C-shaped portion formed integrally with the remaining end of the step, the said C-shaped portion having three inner faces and being of sufficient width and depth to loosely engage the said rod, a rod engaging groove in the face of the C-shaped portion nearest the step, said groove being substantially perpendicular to the step, a threaded aperture directly opposite the groove in the opposed face of the C-shaped portion, a screw operatively positioned in the threaded aperture, a rod engaging block attached to the end of said screw, said block having a rod engaging groove substantially perpendicular to the step and directly opposite and parallel to the said first mentioned rod engaging groove, and a lever which passes through the opposite end of the screw to rotate the screw and force the block against the rod and thereby bring both grooved rod engaging surfaces into clamping engagement with said rod.

2,437,013
COMBINATION OIL PAN AND INTERNAL ENGINE CLEANER
Alva Adams, Connersville, Ind.
Application September 19, 1946, Serial No. 697,884
2 Claims. (Cl. 123—198)

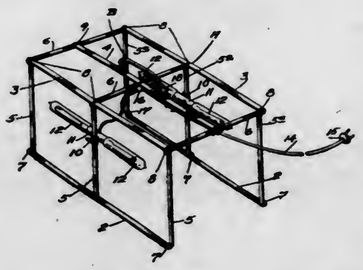
2. In combination with an internal combustion engine oil pan having side walls with outwardly disposed flanges on the upper edges, end walls with semi-circular recesses in the upper edges, a horizontally disposed lower surface with a portion thereof dished downwardly, and having outwardly extending flanges around the semi-circular recesses at the ends, an endless perforated

tube in the pan positioned on the lower surface extending along the sides, and across the ends, and having a downwardly disposed intermediate section thereof connecting the sides intermediate



of the end and positioned in the downwardly dished portion of the lower surface, and a supply connection to the tube extending through a side wall of the pan.

2,437,014
DENTAL AND SURGICAL HAMMER
Walter A. Arnesen and Bernhard Hertweck, Flushing, and Spencer W. Doty, Baldwin, N. Y., assignors, by direct and mesne assignments, to National Electric Instrument Company, Inc., Elmhurst, Long Island, N. Y., a corporation of New York
Application August 19, 1944, Serial No. 550,236
5 Claims. (Cl. 128—303)

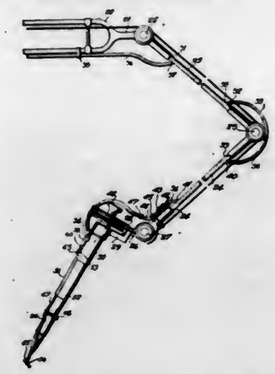


1. An instrument of the type described comprising a cylinder, a piston slideable in said cylinder, a tool carrying rod slideably secured in one end of said cylinder, means for limiting sliding movement of said rod, said cylinder having a longitudinally extending slot in the wall thereof intermediate the ends of the cylinder, an outwardly biased pin movable radially in said piston and having a portion fitting in and extending partially through said slot, a spring captive at one end of said piston, and a member extending partially through said slot and engaging said portion to move it and said piston in a direction to compress said spring, said tool carrying rod being normally held by said piston at the outer end of its limit of movement and being biased to follow said piston to the inner end of its limit of movement as the piston compresses said spring, said portion being disengaged from said member by progressive engagement with the end wall of said slot whereby said piston is freed to impart a blow to said rod and drive it from one end of its limit of movement to the other end thereof.

2,437,015
SUSPENDED HORSE
William Baltz, Pocahontas, Ark.
Application March 29, 1945, Serial No. 585,558
1 Claim. (Cl. 272—52)

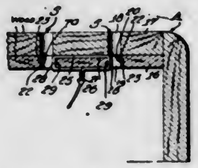
A device of the character described, comprising a rectangular base having opposed side rails and end rails intermediate the ends of said side rails, uprights secured to said base on the outer surface of said side rails at the four corners of said base, said uprights having a straight side and an inclined side and the bottom of the upright is of a greater thickness than the top thereof, plates secured to the inner top edge of said uprights, coil springs having one end thereof secured to said plates, an artificial horse, plates secured to said horse at right angles thereto, the opposite ends of said springs connected to said plates at an angle thereto and adapted to support said horse thereby with relation to said uprights.

2,437,016
THERAPEUTIC APPARATUS
Harry E. Christensen, San Francisco, Calif.
Application July 10, 1945, Serial No. 604,203
3 Claims. (Cl. 219—45)



1. In an apparatus of the character described, a frame comprising a pair of vertical side sections, a plurality of electric lamp bulbs carried by the side sections, means for vertically adjusting the lamp bulbs with relation to each side section, and means for connecting said side sections for lateral and longitudinal movement with respect to each other.

2,437,017
AIR OR WATER ATTACHMENT FOR DENTAL ENGINES
Robert E. Cunningham, Jackson, Miss.
Application February 21, 1947, Serial No. 730,102
3 Claims. (Cl. 32—28)



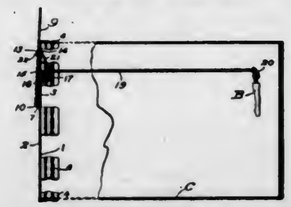
1. A device of the character described, in combination with a dental engine having a hand piece and a dental tool in the hand piece, of a plurality of hinged hollow control rods connected to

said hand piece, a flexible conduit mounted in said control rods for supplying a fluid to said hand piece adjacent the tool therein, a valve in said

conduit for cutting off the supply of fluid to said hand piece and a valve on the hand piece for controlling the amount of fluid supplied thereto.

2,437,018
CIRCUIT CLOSER FOR ELECTRICAL INDICATING APPARATUS OR THE LIKE
Jesse Lincoln Dodson, Kingston, Pa., assignor of one-half to Harry Hoder, Scranton, Pa.
Application August 13, 1945, Serial No. 610,574
3 Claims. (Cl. 173—328)

1. In a mounting for electrical devices, a mounting having openings arranged in a plurality of rows, said mounting having communicating grooves in one face thereof intersecting said openings, a conductor disposed in said grooves and crossing said openings, said conductor at each opening having an arcuate portion firmly pressed into and interfitted with the defining wall of the opening below said face to form an arcuate retaining groove, conductors looped through an opening of each row partially interfitted in the adjacent walls of the openings and occupying grooves in said face.

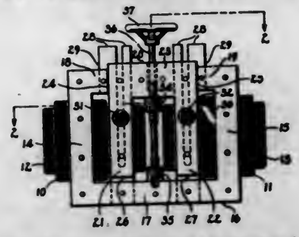


2,437,019
COLOSTOMY RECEPTACLE
Sebastian Eich, Chicago, Ill.
Application December 26, 1946, Serial No. 718,361
2 Claims. (Cl. 128—283)

1. A receptacle for the collection of the discharge draining from a bodily incision and which is adapted to be held over the incision by an elastic belt without causing an appreciable protuberance, which comprises a shallow cup-like member having an annular groove in its edge, and a removable annular soft rubber-like tubular sealing member having a portion fitting snugly in said groove and retained therein solely by the friction and elasticity of the sealing member, said sealing

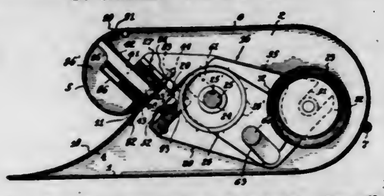
member having a rounded surface for contact with the body.

2,437,020
TRAP
Charles J. Ford, New York, N. Y.
Application August 21, 1944, Serial No. 550,453
1 Claim. (Cl. 43—61)



An article of manufacture for use in connection with an empty can open at one end, including a plate having an inlet, spring wings on the plate adapted for gripping the open end portion of the can to hold it assembled with the plate, a door normally closing the inlet, a hinge connecting the door to one side of the plate for swinging movement toward or from the plate, a spring carried by the hinge and adapted to hold the door normally closed, there being openings in the plate and door positioned to register when the door is in full open position, a bait carrying arm pivotally connected to the other side of the plate and adapted to be positioned for insertion into the engaged can, an arm movable with the bait carrying arm and extended at an angle thereto, and a finger extending from said angularly disposed arm positioned for movement in one direction into the openings to engage the door and hold it in open position against the action of the spring, and in the opposite direction to withdraw from the door opening to release the door, said door, when open, being positioned against and extended beyond the edge of the plate.

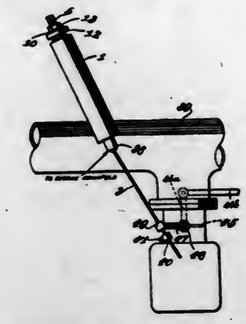
2,437,021
TRANSFORMER WITH REGULATABLE LEAKAGE REACTANCE
Eduard Fries, Zurich-Oerlikon, Switzerland
Application October 6, 1945, Serial No. 620,731
10 Claims. (Cl. 171—777)



3. A transformer providing for substantial variation of its secondary reactance in response

to a variation of its secondary current, comprising, a first pair of legs and a first yoke to form therewith a unitary substantially U-shaped primary magnetic core, a second pair of core legs and a second yoke to form therewith a unitary substantially U-shaped secondary magnetic core inverted relative to and coplanar with and reciprocable within said primary core, said second yoke being located and arranged between the open ends of said primary core to provide with the latter a magnetic circuit of substantially constant reluctance for all relative positions of said cores,

the intermediate portion of said first yoke providing a magnetic bridge including a pair of variable air gaps between the open ends of said secondary core, a pair of primary windings each encircling one of said first pair of legs, and a pair of secondary windings, each secondary winding encircling one of said first pair and the corresponding leg of said second pair of legs and having its inner circumferential wall spaced from the outer circumferential wall of the respective primary winding to afford passage therethrough of the respective leg of said secondary pair of legs.



2,437,022
APPARATUS FOR USING ADHESIVE TAPE
George H. Fritzinger, West Orange, N. J., assignor of one-half to Harold G. Kendall, Brooklyn, N. Y.
Application December 2, 1942, Serial No. 467,616
30 Claims. (Cl. 164—91)

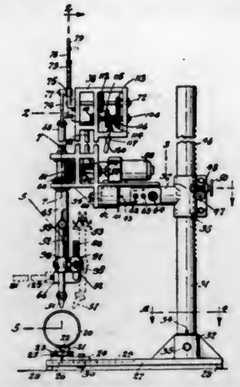
1. In a machine of the character described: the combination of upper and lower cooperating dies, the upper one of said dies comprising a plate terminating in a cutting edge at one side thereof and said lower die including a cutting member cooperable with said cutting edge; means to hold a sheet adjacent to the face of said upper die in position wherein an edge of the sheet is aligned with said cutting edge; and guide means carried by said lower die for directing an adhesive tape across said cutting member for application to said sheet.

2,437,023
AUTOMATIC STARTING SWITCH
Lewis W. Gilbert, Seneca Falls, N. Y.
Application October 13, 1931, Serial No. 568,572
18 Claims. (Cl. 123—179)

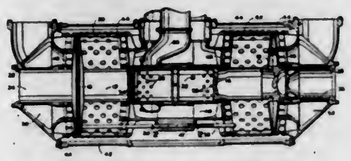
1. In an electric starter system for an internal combustion engine, pressure and vacuum responsive switch means, means connected to the pressure and vacuum responsive switch means to provide unbalanced pressure therein whereby said switch may be opened, and means connect-

ed to the vacuum and pressure responsive device to open said switch mechanically by the accelerator rod independent of said unbalanced pressure.

2,437,024
WHISTLE
Robert Y. Grant, Jr., Townsend, Mass.
Application October 17, 1947, Serial No. 780,545
1 Claim. (Cl. 46—117)



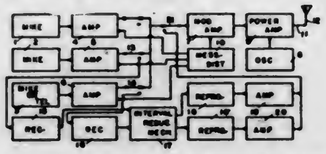
A toy whistle comprising a hollow bird figure and a hollow support for said figure defining a liquid holding chamber, a tail on said figure, an angularly disposed tube extending directly into said hollow support with the lower wall of said tube terminating adjacent the bottom of said chamber, said tail merging with and being joined to said tube to support the tube in connection with said hollow support, said tube having an opening at a point above said support providing a sharp edge adjacent said opening, and a beak on said bird figure provided with a constricted hole, the interior of said hollow figure being in direct communication with said constricted hole.



2,437,025
MACHINE FOR CUTTING HOLES IN PIPES AND SIMILAR ARTICLES
Herman Hatten, Buffalo, N. Y.
Application March 21, 1945, Serial No. 584,006
5 Claims. (Cl. 33—21)

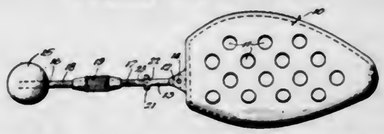
4. A machine for cutting pipes and similar articles, comprising a cutting tool, a frame, a tubular shaft journaled on said frame so that it can turn therein but not move axially relatively thereto, a turret supporting said cutting tool and compelled to turn with said shaft but movable axially thereon by means including a sleeve forming a part of the turret and surrounding said shaft and a spline interposed between said shaft and sleeve; and means for reciprocating said turret lengthwise of the shaft including a shifting rod arranged in the shaft and provided with a collar having an annular groove, and pins ar-

ranged on the turret and engaging with said groove, a shaft journaled on the frame and having a crank, and a connecting rod connecting said crank and shifting rod.



2,437,026
RACK FASTENING FOR FREE-PISTON UNITS
Ralph J. Hooker, Manchester, Conn., assignor to United Aircraft Corporation, East Hartford, Conn., a corporation of Delaware
Application May 11, 1946, Serial No. 669,089
8 Claims. (Cl. 123—46)

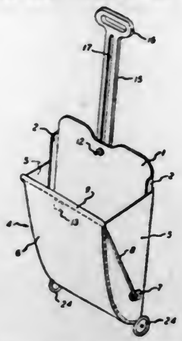
7. In a free-piston unit, opposed piston assemblies including engine pistons and compressor pistons movable therewith a rack projecting from each piston assembly and a pinion interconnecting said racks to cause said assemblies to move symmetrically, each of said racks being guided adjacent to the pinion in combination with means for supporting each rack in the compressor piston to provide for a limited amount of lateral movement of the rack within the compressor piston said means including a bore in the compressor piston larger in diameter than the rack and in which the end of the rack is positioned, a flange on said rack engageable axially with the compressor piston and a cap on the end of the rack having a flange engaging axially with the side of the compressor piston opposite to the flange on the rack and spacer rings positioned between the compressor piston and one of the flanges for controlling the axial position of the rack within the piston.



2,437,027
TIME DIVISION MULTIPLEX COMMUNICATION SYSTEM
John H. Homrighous, Oak Park, Ill.
Application January 12, 1943, Serial No. 472,105
12 Claims. (Cl. 250—9)

1. In a multiplex communication system, a transmitter, means at said transmitter to produce a carrier wave, means at said transmitter to produce a first series of successive saw tooth waves, including control signals to terminate the waves, means to select different recurrent periods of time in said saw tooth waves for controlling the transmission of different signals in the recurrent periods, said last means comprising apparatus and suitable circuits to select amplitude measurements in the said saw tooth waves for both initiating and terminating each of the said periods, means to transmit signals representative of different messages and said control signals modulated on said carrier wave during a number of the said recurrent periods, a receiver, means to receive said signals, means at said receiver to

produce a second series of successive saw tooth waves under the control of said control signals, means to select recurrent periods in the said second series of saw tooth waves corresponding to said recurrent periods at the transmitter for controlling the reception of different signals in the said recurrent periods, said last means comprising a message signal amplifier for each of the said recurrent periods, and a plurality of relay tubes under control of said second series of saw tooth waves to interrupt substantially current through the several relay tubes in successive rotation for controlling said amplifiers to reamplify said signals representative of different messages in successive rotation.



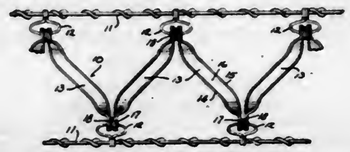
2,437,028
SHOE TREE
William F. Horsting, Wilmette, Ill.
Application December 8, 1945, Serial No. 633,687
2 Claims. (Cl. 12—128.6)

1. A shoe tree comprising a hollow toe piece of relatively thin plastic curving downward at its forward end and sides and having a straight cross piece at its back connected to the sides and extending through the full depth of the toe piece, the toe piece being open at the bottom and having openings through its upper surface, a pair of ears extending outward from the back surface of the cross piece, a rod having a flattened end extending between and pivotally pinned to the ears, a heel piece, a rod connected to the heel piece, the ends of the rods being formed with threads of opposite hand, a turnbuckle threaded on the rods to adjust the effective length thereof, and a hinge in one of the rods to enable the rods to swing upward relative to the toe and heel pieces.

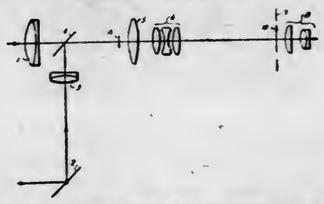
2,437,029
COLLAPSIBLE SHOPPING CART
William B. Howard, La Jolla, Calif.
Application January 12, 1946, Serial No. 640,845
1 Claim. (Cl. 280—36)

In a shopping cart the combination of a back of sheet material, wheels mounted on the said back at the lower end thereof, a vertically disposed channel secured to the said back, a slidable handle positioned within the said channel, lateral grooves in the said handle, an opening in the

back of the said channel for registering with the said grooves, and a spring actuated latch for extending through the said opening and engaging any of the said grooves.



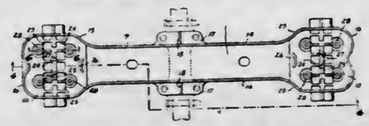
2,437,030
ATTACHMENT OF RUBBER SOLES TO UPPERS OF SHOES
John Hoza, Belcamp, Md.
Application June 19, 1946, Serial No. 677,785
11 Claims. (Cl. 36—14)



1. A shoe, including an upper having its lower portion turned inwardly horizontally to form part of the shoe bottom, the terminal edges of the upper extending downwardly and outwardly at an angle toward the side edges of the shoe, an inner sole extending between the turned-in portions of the upper and in the same horizontal plane to complete the bottom of the shoe, the marginal edges of the inner sole extending downwardly and outwardly at an angle corresponding to and contacting with the correspondingly turned terminal edges of the upper, stitches uniting the contacting terminal edges of the upper and inner sole to form an anchor, a mass of rubber providing an outer sole vulcanized to the inner sole and that portion of the upper forming part of the shoe bottom and also vulcanized to the lower portion of the shoe upper proper to provide an edge protective portion for the upper, and said anchor and stitches being enclosed in the mass of rubber to secure the meeting edges of the turned-in portion of the upper and of the inner sole, said stitches uniting such parts against breakage or separation during use of the shoe.

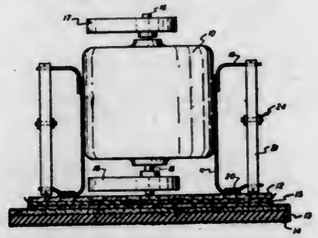
2,437,031
TIRE CHAIN
Pearley A. Jasmer, Milwaukee, Wis.
Application May 28, 1945, Serial No. 596,291
1 Claim. (Cl. 152—228)

In a device of the character described, a cross-link having a channel formation and eyes one in each end thereof, an angular planar bend of the link adjacent one end thereof, and a planar oppositely directed bend adjacent the other end thereof both bent portions being inclined rearwardly of said channel to conform to a tire curvature.



2,437,032
VARIABLE FIELD RANGE AND VIEW FINDER
Edward K. Kaprelian, Alexandria, Va.
Application August 9, 1945, Serial No. 609,840
4 Claims. (Cl. 88—2.4)

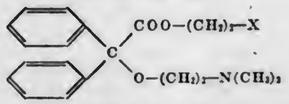
1. In a combined viewfinder and rangefinder system for photographic cameras, lens means for forming an image of the viewfinder field of view at a given magnification in a given plane, lens means for forming an image of a rangefinder field of view at the same magnification in the same plane, the area of said viewfinder field of view being less than that of the rangefinder field of view, means for obtaining registry between the rangefinder field of view and the corresponding portion of the viewfinder field of view, a single ocular for viewing said images simultaneously, said ocular and lens means producing an image at a fixed distance in space, and means for altering the magnification of the system from approximately 0.3 to 6 times to thereby vary to a considerable extent the size of the viewfinder field of view and the rangefinder field of view while maintaining the same image distance in space, said means comprising two or more axially displaceable lens elements between the ocular and the plane of the view finder and range finder images.



2,437,033
SPRING PLANK
Rudolph Leppla, Pittsburgh, Pa., assignor to McConway & Torley Corporation, Pittsburgh, Pa., a corporation of Pennsylvania
Application April 3, 1946, Serial No. 659,356
4 Claims. (Cl. 105—190)

1. A one piece cast metal spring plank having an elongated body portion and widened end portions, the upper faces of which provide seats for coil spring groups, said plank having a marginal upwardly projecting flange extending along its sides and around its ends, the portions of the flange bordering the spring seats having rounded

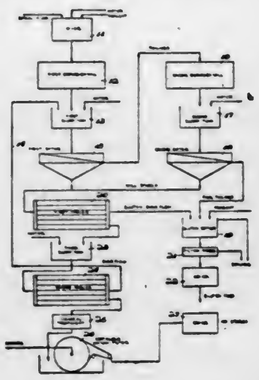
spring positioning portions, said body portion of the plank having laterally projecting stiffening and attachment flanges intermediate its ends, said end portions each having upwardly projecting centrally disposed spring positioning lugs.



2,437,034
POLISHING MACHINE
Gotthold Harry Meinzer, Glendale, Calif.
Application September 6, 1944, Serial No. 553,126
2 Claims. (Cl. 51—170)

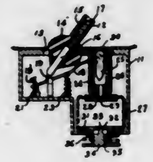
1. A device adapted to smoothing solid surfaces, comprising: a platen; a motor rigidly mounted on said platen with its shaft perpendicular thereto; a pair of eccentric weights attached to said shaft, rotating therewith and positioned on opposite sides of the center of mass of the system, said weights being at least substantially in phase and being so proportioned and positioned as to produce vibration of the system in planes parallel to the plane of said platen; a handle, and resilient means for attaching said handle to said motor on opposite sides thereof.

2,437,035
ETHER-ESTERS OF ORGANIC HYDROXY DIPHENYL ACETIC ACID AND PROCESS FOR MANUFACTURE OF SAME
Alexander Lang Morrison and Marianne Königstein, Welwyn Garden City, England, assignors to Hoffmann-La Roche Inc., Nutley, N. J., a corporation of New Jersey
No Drawing. Application April 1, 1947, Serial No. 738,734. In Great Britain March 30, 1946
Section 1, Public Law 690, August 8, 1946
8 Claims. (Cl. 260—472)



1. Derivatives of [β-dimethylaminoethoxy]-diphenylacetic acid of the formula

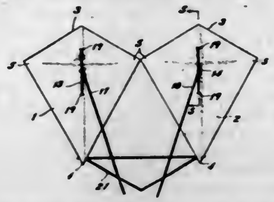
wherein X is selected from the group consisting of dimethylamino, diethylamino and piperidino radicals.



2,437,036
PRODUCTION OF STARCH FROM CEREAL GRAINS
Harvey K. Murer, Summit, and William A. Mitchell, Cedar Grove, N. J., assignors to General Foods Corporation, New York, N. Y., a corporation of Delaware
Application December 22, 1943, Serial No. 515,284
22 Claims. (Cl. 127—67)

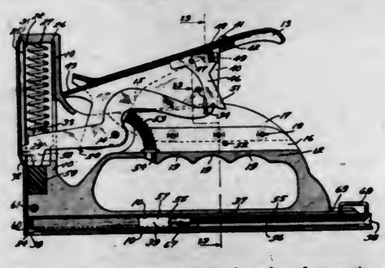
1. A process of producing cereal starch from unsteeped grain which comprises mixing the grain with water and subjecting it to mechanical treatment in a colloidizing apparatus, whereby the

gluten is jellified and dispersed to release the starch granules, and then separating and recovering the starch.



2,437,037
DELAYED ACTION ELECTRIC SWITCH
Perley A. Nelson and William R. Nelson, El Segundo, Calif.
Application April 12, 1946, Serial No. 661,548
4 Claims. (Cl. 200—34)

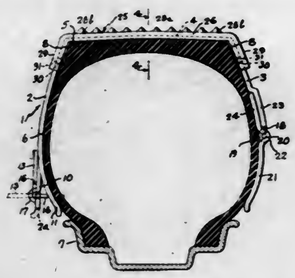
1. In an electric switch, a movable contact arm, a spring biasing said contact arm to a first position, a rockable resilient member engaging said contact arm, said rockable member being formed and arranged to exert a force at times urging said arm towards a second position, a normally open collapsible air container in the path of said arm as it moves toward said second position, means carried by said arm formed and arranged to substantially close said container as the arm begins its movement toward said second position, and a restricted exhaust opening in said container through which air is expelled under the influence of said force as said arm continues its movement toward its second position.



2,437,038
KITE
Wilfred A. Nowka, Hastings, Nebr.
Application November 18, 1946, Serial No. 710,589
5 Claims. (Cl. 244—153)

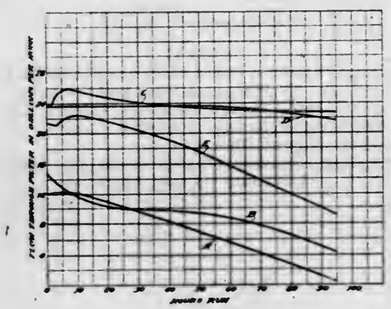
1. A kite comprising twin surface forming sections substantially diamond shaped, a frame common to both sections and to which said sections are secured in side by side coplanar relation, said frame comprising a pair of side sticks in the longitudinal axes of said sections, and a

pair of leading and trailing cross sticks connecting said side sticks together.



2,437,039
STAPLE DRIVING IMPLEMENT
Roy E. Peterson, Norwalk, and Howard M. Larsen, Fairfield, Conn., assignors, by mesne assignments, to Hotchkiss Realty Corporation, Norwalk, Conn., a corporation of Delaware
Application March 16, 1945, Serial No. 583,108
20 Claims. (Cl. 1—49)

1. In a portable staple driving implement, pawl operated staple driving mechanism including the combination with an implement frame of, a handle lever pivotally mounted on said frame to swing about an axis, a power lever pivotally mounted to swing about said pivotal axis, a staple driver impellably related to said power lever, and driving connection shiftably carried on one of said levers and arranged to transmit impelling force from said handle lever to said power lever in only one direction of lever swinging movement, a power spring stationed by said frame arranged to urge said power lever in the opposite direction of swinging movement, and an auxiliary spring stationed by said frame arranged to urge said handle lever in said opposite rotary direction.

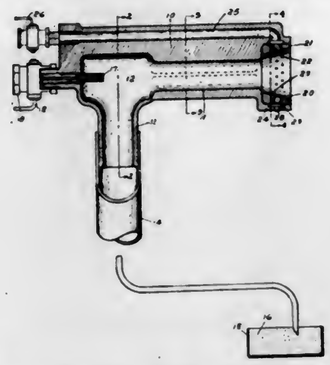


2,437,040
NONSKID DEVICE FOR TIRES
Gerard T. Prevost and John M. Downes, Bridgeport, Conn.
Application July 3, 1947, Serial No. 758,940
10 Claims. (Cl. 152—230)

10. A nonskid device for vehicle tires comprising a clamp including a strap member provided with spaced legs to engage opposite sides of a tire and a connecting bar to pass over the tread, manually operable means on one leg to clamp the legs against the sides of the tire, an insert tread member including a body portion over the connecting bar provided with road gripping lugs, said tread member including portions overlapping the outer portions of the leg members adjacent the connecting bar, said overlapping portions and the leg members being provided with cooperating lugs and openings to hold the tread member in position by spring action of said member, and a cam lever pivoted to one of said members and

adapted to force an end of the tread member outwardly to separate the adjacent lugs and openings.

2,437,041
HYDROCARBON FUEL OIL
Wayne A. Proell, Chicago, Ill., assignor to Standard Oil Company, Chicago, Ill., a corporation of Indiana
Application February 29, 1944, Serial No. 524,473
10 Claims. (Cl. 44—66)



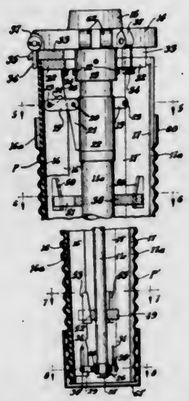
1. A normally liquid hydrocarbon fuel oil, normally susceptible to the formation of non-casual sediment and which normally causes clogging of small apertures, containing a filtered technical grade phosphatide substantially free of liquid hydrocarbon precipitable constituents, obtained by dissolving said phosphatide in a hydrocarbon solvent, and filtering the mixture, said filtered phosphatide being used in small but sufficient amounts to inhibit the clogging tendency of said hydrocarbon fuel oil.

2,437,042
MATERIAL PROJECTING APPARATUS
Robert A. Prosser, Riverside, and Arthur S. Nichols, Oak Park, Ill., assignors to The Illinois Clay Products Company, Joliet, Ill., a corporation of Illinois
Application May 29, 1944, Serial No. 537,917
3 Claims. (Cl. 91—44)

1. Apparatus for projecting light weight granular solids and the like comprising in combination a tubular member having a straight bore with an open discharge end, a suction chamber extending at an angle from the entrance to said bore, said chamber being connected with a con-

duit leading to a supply of said light weight solids, an air jet at the entrance end of and in alignment with said bore discharging a stream of air down said bore and adapted to create a suction in said chamber sufficient to cause said solids to

be forced into said conduit and sent into said chamber to join said air stream and to be carried thereby out the discharge end of said bore, and means at said discharge end and around the stream of solids for adding liquids thereto as they leave said discharge end.



2,437,043

COLLAPSIBLE PILE-DRIVING MANDREL

Edmund W. Riemenschneider and Douglas T. Greth, Canton, Ohio, assignors to The Union Metal Manufacturing Company, Canton, Ohio, a corporation of Ohio

Application November 2, 1945, Serial No. 626,194

4 Claims. (Cl. 61—79)

1. In combination, a corrugated pile shell, a mandrel for driving said shell into the ground by engaging the inner surface of the shell, said mandrel including a plurality of circumferentially arranged segments having soft rubber facings, and means for forcing said segments radially outward to squeeze said facings into the corrugations, said facings having sufficient radial thickness to substantially fill said corrugations when the segments are forced radially outward.

2,437,044

PROCESS OF TANNING WITH CHROMIATES OF LIGNIN SULFONIC ACIDS

Edwin A. Robinson, Chatham, and Ralph M. Beach, Florham Park, N. J., assignors to Nopco Chemical Company, Harrison, N. J., a corporation of New Jersey

No Drawing. Original application November 21, 1941, Serial No. 419,944. Divided and this application August 2, 1945, Serial No. 608,607

6 Claims. (Cl. 8—94.26)

1. In the process of tanning leather, the step which comprises subjecting the leather to the action of an aqueous solution of a chromiate produced by reacting a water-soluble dichromate with a compound selected from the class consisting of lignin sulfonic acid and formaldehyde condensation products thereof, the quantity of dichromate used being not more than 20% based on the weight of the solids in the lignin compound.

2,437,045

DETERMINATION OF HYDROCARBON CONCENTRATION IN SOIL SAMPLES

Edwin E. Roper, Tulsa, Okla., assignor to Stanolind Oil and Gas Company, Tulsa, Okla., a corporation of Delaware

Application April 24, 1944, Serial No. 532,427

5 Claims. (Cl. 23—232)

1. A method for determining an index of the concentration of hydrocarbons sorbed on a soil sample, comprising subjecting each of a plurality of de-aerated, substantially similar portions of said soil sample to an artificial atmosphere, each of said atmospheres initially containing a different known concentration of hydrocarbons, maintaining each of said atmospheres in contact with the corresponding portion of said soil sample for a substantial period of time sufficient to establish substantial equilibrium between the partial pressures of the hydrocarbons in the artificial atmosphere and the hydrocarbons sorbed on the soil sample, then determining the concentration of hydrocarbons in each of said atmospheres, whereby said index may be determined.

2,437,046

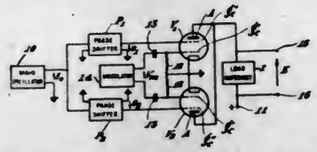
STABILIZATION OF POLYESTERS

David A. Rothrock, Jr., and Richard F. Conyne, Philadelphia, Pa., assignors to The Resinous Products & Chemical Company, Philadelphia, Pa., a corporation of Delaware

No Drawing. Application October 15, 1943, Serial No. 506,432

7 Claims. (Cl. 260—75)

1. In the stabilization against change in molecular weight of a linear polyester consisting of chains from a saturated dicarboxylic acid with a chain of four to fourteen carbon atoms and carboxyl groups as the sole reactive functional groups and a saturated dihydric alcohol with a chain of two to twelve carbon atoms and alcoholic hydroxyl groups as the sole reactive functional groups, the steps which comprise reacting by condensing under the influence of heat the acid and the alcohol until polyesterification has taken place, then reacting under the influence of heat as the sole reactants the resulting linear polyester and from 0.0015 to 0.075 gram mol per kilogram of said polyester of a phosphorous compound from the group consisting of alkyl phosphite esters in which the alkyl group has one to eight carbon atoms and phenyl and alkylphenyl phosphite esters wherein the alkyl substituent is joined to the phenyl group and contains one to eight carbon atoms.



2,437,047

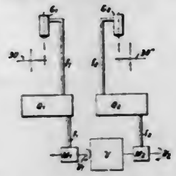
PHASE MODULATION

Leon Rubin, Buenos Aires, Argentina, assignor to Hartford National Bank and Trust Company, Hartford, Conn., as trustee

Application December 23, 1943, Serial No. 515,446

9 Claims. (Cl. 179—171.5)

1. The method of varying the phase of an electrical oscillation in accordance with the amplitude variations of a modulating potential, which comprises the steps of generating a main oscillation, deriving from said main oscillation two partial oscillations having a phase difference smaller than π radians, antiphasally varying the amplitudes of said partial oscillations in accordance with the amplitude variations of a predetermined portion of the period of said modulating potential, antiphasally maintaining the amplitudes of said partial oscillations substantially constant during the remaining portion of the period of said modulating potential, and vectorially adding said non-linearly amplitude modulated partial oscillations to produce an electrical oscillation having a phase angle substantially proportional to the amplitude of said modulating potential.



2,437,048

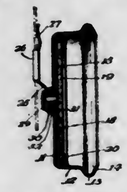
APPARATUS FOR DETERMINING THE RELATIVE DIFFERENCES OF SPEED OF TWO ROTARY ELEMENTS

Jaime Sallés, Montevideo, Uruguay

Application January 16, 1945, Serial No. 573,126

2 Claims. (Cl. 235—103.5)

1. Apparatus for testing the speed of a rotating member, such as a shaft, disc of a meter and similar apparatus, in comparison with the speed of a rotating standard member, wherein a band of alternating light-absorbing and light-reflecting marks is provided on each of said members, and wherein two photo-electric heads are provided each one adapted to scan one of said bands and to convert the sequence of light fluctuations scanned at the rotation of the appertaining member into a sequence of electric impulses, a synchronous motor being associated with each one of said photo-electric heads and adapted to be electrically driven under frequency-control by the electric impulses of said sequences synchronously therewith, for thus producing at the shaft of each of said motors a speed proportional to the speed of said rotating member associated therewith; characterized by differential gear means being coupled to the rotary member for producing the differential of both said motor speeds, said apparatus further including a computing device adapted to be actuated by said differential speed and the speed of said motor associated with said standard member for thus computing the relation of the speed difference of said member to be tested and said standard member to the speed of said standard member.



2,437,049

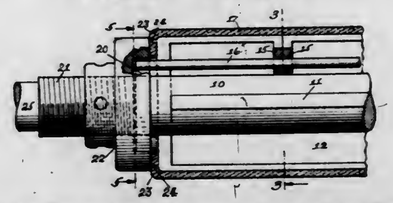
EAR PROTECTOR

Robert Henry Salisbury and Edward Martin Oehser, San Diego, Calif., assignors to Consolidated Vultee Aircraft Corporation, San Diego, Calif., a corporation of Delaware

Application January 5, 1945, Serial No. 571,399

1 Claim. (Cl. 128—152)

An ear protector comprising, a cup of relatively thin elastic material, with a substantially flat back-wall and an integral annular rim adapted to extend around the ear and the bony structure thereof, a supporting device, means, including cup-shaped washers of different diameters and engaging the opposite faces of said back wall and a screw, for clamping the washers against the central portion of the elastic back-wall and connecting said portion of the back-wall to the device, with the circumferentially outward portion of the back-wall free to be flexed angularly relatively to its central portion, a substantially flat stiffening plate having one of its faces fitting against, and free for angular movement with, said outward portion of the back-wall, a substantially flat sound-damping disk fitting against the other face of the plate, and an annular member in the annular rim, for removably confining the plate and disk between the back-wall and said member and in outwardly spaced relation from the free end of the rim.



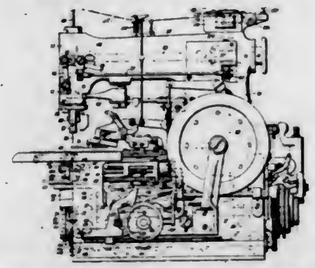
2,437,050

DAMPENING ROLLER

Armand C. Schulz, Milwaukee, Wis.

Application February 5, 1945, Serial No. 576,275

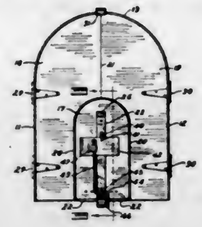
3 Claims. (Cl. 91—67.8)



1. A dampening roller comprising a longitudinal bearing shaft having three spaced radially extending longitudinal ribs; two semi-cylindrical roller sections hinged along one longitudinal edge to the central of said ribs and arranged to swing into and out of contact with the other ribs; complementary hub sections arranged at the ends of the two semi-cylindrical roller sections; and a holding cap threaded on each end of said longitudinal bearing shaft and arranged to engage over said complementary hub sections when in closed relation; an absorbent covering for the two

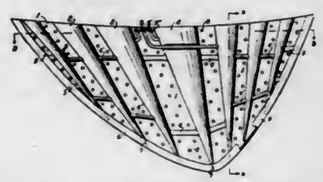
semi-cylindrical roller sections having its longitudinal edges turned in around the longitudinal edges of said sections; and means for securing said sections in closed relation.

2,437,051
HYDROGENATION OF CARBON MONOXIDE
Eugene E. Sensel, Beacon, and Roland A. Beck, Glenham, N. Y., assignors, by mesne assignments, to The Texas Company, New York, N. Y., a corporation of Delaware
No Drawing. Application March 24, 1944, Serial No. 528,004
2 Claims. (Cl. 260—449.6)



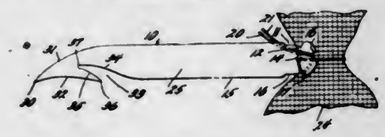
1. In the process for reacting carbon monoxide and hydrogen at elevated temperatures by contact with a catalyst, the method of increasing the yield of relatively unsaturated liquid hydrocarbons which comprises contacting a mixture of carbon monoxide and hydrogen at a temperature within the range of from about 392° F. to about 450° F. with a solid catalyst consisting of a major proportion of metallic cobalt in admixture with thorium oxide, and with an amount of sodium carbonate within the range corresponding to from about 0.55 to about 2.85 per cent sodium by weight based on the weight of the cobalt, supported on a siliceous supporting material, and correlating said contact temperature with the sodium content of said catalyst, said temperature being higher within said range as the amount of sodium is increased, thereby obtaining a maximum production of unsaturated liquid hydrocarbons.

2,437,052
THREAD-CONTROLLER FOR SEWING MACHINES
Edward P. Spaine, Bridgeport, Conn., assignor to The Singer Manufacturing Company, Elizabeth, N. J., a corporation of New Jersey
Application May 18, 1946, Serial No. 670,801
9 Claims. (Cl. 112—241)



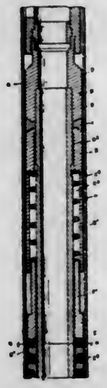
1. A two-thread sewing machine having work-holding means and stitch-forming mechanism which are relatively movable to space stitches, said stitch-forming mechanism including an endwise reciprocatory and laterally vibratory thread-carrying needle, a threaded looper and a non-threaded looper adapted alternately to enter thread-loops presented by said needle, loop-retainers for seizing thread-loops from said loopers and presenting them for entrance by said needle, means for actuating said stitch-forming mechanism including a driving bar operatively connected to said loop-retainers, thread-guiding means carried by said driving bar for directing thread to said threaded looper, and a thread-controller adapted to engage the thread between said thread-guiding means and said threaded looper.

2,437,053
MAILBOX
Clark F. Swanson, Cologne, Minn.
Application March 27, 1946, Serial No. 657,382
5 Claims. (Cl. 232—25)



1. A door structure for a rural mail box having an open front end, comprising a center door hinged to swing forward and downward and adapted to close only a lower center part of said open end, and side doors hinged to swing outwardly and forwardly and adapted to cooperate to close the remaining side and upper portions of said open end.

2,437,054
INFLATABLE ORTHOPEDIC SHOULDER PAD
Ladislao Soboslay Tatai, Habana, Cuba
Application January 14, 1946, Serial No. 641,114
In Cuba July 2, 1945
8 Claims. (Cl. 2—268)

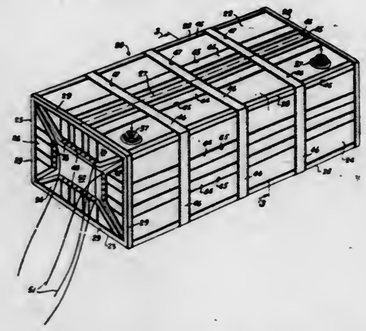


1. An inflatable shoulder pad comprising, a substantially semicircular foundation of flexible material, a plurality of hollow, spaced, substantially conical members having their bases in line with the straight side of said foundation and their apexes fixed to points at the periphery of said foundation, a plurality of links connecting each of said members to the adjacent one and the outlying members to said periphery, and means for inflating said members.

2,437,055
BAG SEAL AND HANDLE
Clifford J. Thompson, Davenport, Fla.
Application July 15, 1946, Serial No. 683,688
4 Claims. (Cl. 224—57)

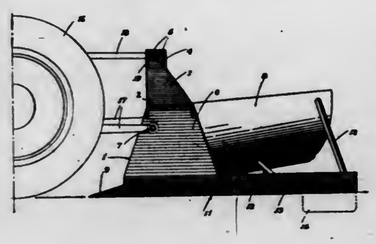
1. A handle for a bag of netted material and closed by a drawstring, comprising an elongated strip of flexible material having at one end a point formed by the junction of a concave curved edge and a convex curved edge, meeting in an acute angle, having a deep recess extending toward the point forming a hook adjacent the concave edge portion, having at the end farthest from the point a recess and on each of the two sides near said farthest end a cord receiving slot ending in an eye, whereby when the two cords of the draw string are inserted in one of the eyes and the strip is pressed down to the bag while holding the free ends of the draw string the bag is closed and may be held closed by winding the string through the other slot and the recess and back through the first eye and the strip may therefore become a handle by catching the hook in the net at a convenient point, the distance between the hook and the slots being at least as great as the width of an adult hand.

2,437,056
PISTON CONSTRUCTION
John C. Vroman, Detroit, Mich.
Application June 10, 1946, Serial No. 675,733
5 Claims. (Cl. 309—4)



1. In a pump, the combination with a barrel and a plunger for reciprocation therewithin, of a series of packing rings sleeved on said plunger and forming peripheral sealing contact with said barrel, resilient means normally holding said series of rings in fixed relation to said plunger but permitting independent axial movement of the latter in case the rings adhere to the barrel, and a shoulder on said plunger for delivering an impact on said series of rings after a predetermined relative movement thereof.

2,437,057
HEAT SEALING METHOD
Harry F. Waters, New York, N. Y.
Application May 11, 1942, Serial No. 442,528
1 Claim. (Cl. 154—42)

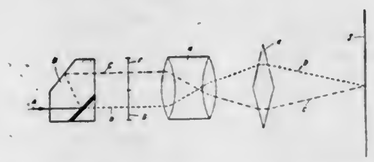


The method of forming heat seals comprising juxtaposing heat-sealable faces of sheet material, and applying heat and pressure to interfuse the same in a continuous seam with a flaring, generally V-shaped excess of the interfused sheet material formed as a dam interiorly and longitudinally of the seam.

2,437,058
COLLAPSIBLE CONTAINER FOR AIR TRANSPORTATION OF FLUIDS
Harry F. Waters, New York, N. Y.
Application July 3, 1943, Serial No. 493,340
3 Claims. (Cl. 150—0.5)

3. A flat-foldable cover for collapsible liquid containers, comprising longitudinal panel sections of fabric, rectangular stiffening inserts within the sections, at least two opposed sections being bipartite and all of the sections being joined by hinge lines, and separate end sections comprising trapezoidal segments secured to the ends of the panel sections and having their free ends covered with binding tape, the said tape extending along the longitudinal edges of the cover and being secured thereto.

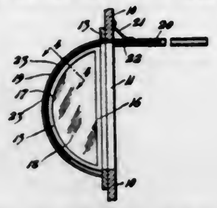
2,437,059
GROUND WORKING IMPLEMENT
Marvin L. Williams, Tulare, Calif.
Application May 7, 1945, Serial No. 592,485
2 Claims. (Cl. 37—98)



1. A ground working implement comprising a cross beam, a downwardly projecting vertically disposed plate at one end of the cross beam, a longitudinally disposed landside fixed to the lower edge of the plate and projecting rearwardly therefrom, a mold board fixed to the forward edge of the plate and projecting rearwardly and diagonally therefrom, a plow share fixed to the forward end of the mold board, a trunnion projecting outwardly from the plate and the opposite end of the cross beam respectively and adapted to be connected to draft links, an upstanding post disposed centrally of the cross beam, and means at the upper end of the post for connecting it to a compression link.

2,437,060
PROCESS OF RECOVERING GAMMA GLOBULINS FROM HUMAN BLOOD SERUM
John W. Williams and Harold F. Deutsch, Madison, Wis., assignors to the United States of America, as represented by the Secretary of War
No Drawing. Application October 23, 1945, Serial No. 624,102
5 Claims. (Cl. 260—112)

1. The method of recovering human serum gamma globulins which contain immune bodies from mixtures of human serum beta and gamma globulins which comprises, forming a suspension of a mixture of human serum beta and gamma globulins, adding a compound selected from an acid and acid buffer solution to adjust the pH to from 4.0 to 5.1, adjusting the pH to from 5.08 to 5.18, stirring said suspension, adding 0° C. pyrogen-free water containing sufficient electrolyte to provide a predetermined low level of ionic strength until the volume is approximately 20 liters per kilogram of said mixture suspended, adding ethanol until the ethanol concentration is from 15 to 17% and the ionic strength is 0.010 to 0.015 to precipitate the beta globulins, centrifuging to remove said precipitate, adjusting the pH of the effluent to from 7.0 to 7.2, adding ethanol to said effluent until the ethanol concentration is from 20 to 25% to precipitate the gamma globulins, and centrifuging to recover said gamma globulins.

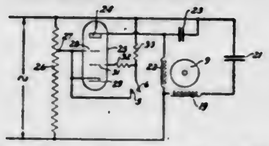


2,437,061
PROJECTION OF STEREOSCOPIC IMAGES
Edwin Herbert Wright, Farnham Common, England
Application June 5, 1946, Serial No. 674,481
In Great Britain September 7, 1945
2 Claims. (Cl. 88—16.6)

1. A system for the projection by means of a single light beam of stereoscopic cinematograph images consisting of left and right eye-view images arranged side-by-side on successive frames on a single width film, comprising means disposed in said beam between the light source and the film for dividing said beam into two parallel and contiguous beams polarized in planes mutually at right angles, said polarized beams passing through the left and right eye-view images respectively, a single objective and means for superimposing the respective eye-view images on the screen.

2,437,062
WIND SCREEN
Glen D. Wyble, Maywood, Calif.
Application November 1, 1945, Serial No. 626,037
2 Claims. (Cl. 160—91)

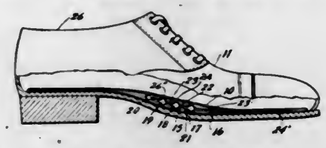
1. The combination with the side wall of the cab of a locomotive having a window opening therein, of a wind screen for inclosing said opening with obstructing clear vision therethrough which comprises a frame adapted to be attached to the outer face of the wall of the cab adjacent the window opening, an arched frame hinged to each vertical side bar of the first mentioned frame and extending outwardly from the outer side thereof, a transparent panel in each hinged frame, and a flexible member of transparent ma-



terial carried between the hinged frames and adapted to form a convex housing to protect the operator of the locomotive from the elements when he is occupying the normal driving position in the locomotive cab.

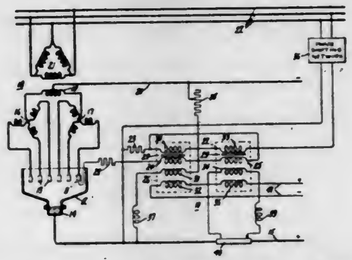
2,437,063
NONDIFFUSING 1-PHENYL-5-PYRAZOLONE COUPLERS FOR COLOR PHOTOGRAPHY
Walter Zeh, Wolfen, Kreis Bitterfeld, and Wilhelm Schneider and Alfred Fröhlich, Dessau, Germany, assignors to General Aniline & Film Corporation, New York, N. Y., a corporation of Delaware
No Drawing. Application February 17, 1942, Serial No. 431,263. In Germany August 8, 1940
7 Claims. (Cl. 95—6)

1. A silver halide emulsion for color forming development containing as the dyestuff former for red a soluble salt of 1-phenyl-5-pyrazolone containing in the 3-position of the pyrazolone nucleus a radical producing fastness to diffusion and in the phenyl nucleus at least one group increasing the solubility in water and in the positions of said phenyl nucleus selected from the group consisting of the 3-, 4- and 5- positions at least one substituent selected from the class consisting of alkyl, alkoxy, alkthio, alkseleno, aryloxy and halogens.



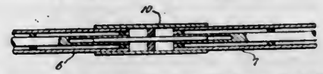
2,437,064
TWO-PHASE MOTOR CONTROL
John H. Andresen, Jr., Port Washington, N. Y., assignor to Square D Company, Detroit, Mich., a corporation of Michigan
Application January 29, 1946, Serial No. 644,136
10 Claims. (Cl. 318—31)

1. In a motor control system for controlling the direction of rotation of a two phase motor fed from a single phase alternating current source, means for feeding one phase of the motor from the source through a condenser, means for feeding the second phase of the motor from the source through a second condenser having a lower capacity than said first-mentioned condenser so that the current in the second phase of the motor leads the current in said one phase of the motor in time-phase relation to produce motor rotation in one direction, and means for feeding said second phase from the supply through a circuit



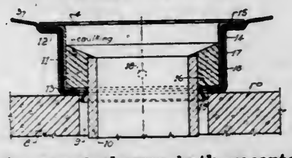
of substantially no capacity so as to produce a current in said second phase following in time-phase relation the current in said one phase to effect a rotation of the motor in the opposite direction.

2,437,065
BREATHING SHOE
Seneca B. Austin, Balboa, C. Z.
Application February 7, 1946, Serial No. 646,088
2 Claims. (Cl. 36—3)



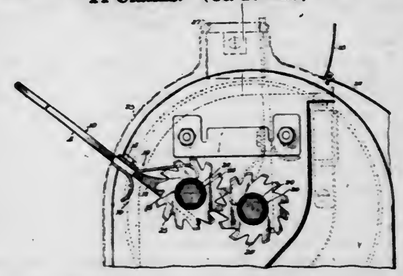
1. In combination with a shoe, of a removable insole therefor including a flexible casing, a resilient rubber filler therein having intersecting transverse and longitudinal interiorly disposed channels adjacent the instep portion thereof providing oppositely disposed similarly shaped vertically spaced lugs, and said insole being formed with an air inlet port through its upper surface connected with one of said transverse channels and with a plurality of outlet ports through its lower surface adjacent the toe end of said insole.

2,437,066
ELECTRIC CONTROL CIRCUIT
Georges Belfils, Belfort, France, assignor to General Electric Company, a corporation of New York
Application December 31, 1942, Serial No. 471,808
In France August 5, 1941
8 Claims. (Cl. 175—363)



1. In combination, a supply circuit, a load circuit, at least one of said circuits being an alternating-current circuit, electric translating apparatus interconnecting said circuits including electric valve means having a control member, a control circuit for energizing said control member to control the transfer of energy between said circuits comprising a supply of alternating voltage having the same frequency as said alternating-current circuit, an impedance, a pair of saturable inductance devices each including an impedance winding and a control winding, means connecting said impedance windings and said impedance in series and across said supply of alternating voltage, means connecting said impedance in circuit with said control member, and means for energizing said control windings respectively in accordance with different electrical conditions to regulate said valve means selectively in accordance with said conditions.

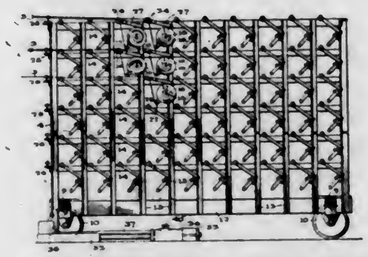
2,437,067
ADJUSTING MEANS FOR TRANSMISSION LINES
Frank J. Bingley, Philadelphia, Pa., assignor, by mesne assignments, to Philco Corporation, Philadelphia, Pa., a corporation of Pennsylvania
Application November 17, 1943, Serial No. 510,671
6 Claims. (Cl. 178—44)



4. A co-axial transmission line comprising two main sections, an adjustable movable section for varying the length of the line, and two coupling sections, all of said sections being connected in series, said coupling sections each having an electrical length equal to a quarter-wave length, and each interposed lengthwise between and interconnecting one of said main sections and one end of said adjusting section, each of said coupling sections having a characteristic impedance equal to the geometric mean of the characteristic impedances of the said sections to which it is immediately connected.

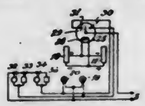
2,437,068
DRAIN CONNECTOR FOR SHOWER BATH RECEPTORS
Benjamin F. Birdwell, Louisville, Ky., assignor to Porcelain Metals Corporation, Louisville, Ky., a corporation of Kentucky
Application October 5, 1944, Serial No. 557,342
7 Claims. (Cl. 4—146)

1. An improved shower bath receptor of the type having a floor of sheet metal of relatively light gauge and containing a drain opening comprising: a metal connector integrally connected to the floor to depend from the periphery of the drain opening, said connector being composed of floor metal.



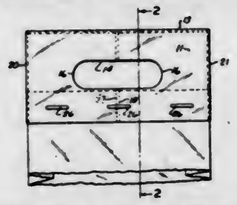
2,437,069
CLEANING TOOL FOR FOOD TENDERING MACHINES
Oscar Brownsey, La Porte, Ind., assignor to U. S. Slicing Machine Company, La Porte, Ind., a corporation of Indiana
Application October 16, 1943, Serial No. 506,484
14 Claims. (Cl. 17—25)

10. A tool of the character described, embodying a handle, a shaft engaging stirrup forming



an extension of said handle, and a plurality of spaced fingers disposed on one side of said stirrup and inclining upwardly from the handle and away from said stirrup, the extremities of said fingers being curved in a direction towards but spaced from said stirrup.

2,437,070
PORTABLE LOOM CREEL AND ADJUSTING MEANS THEREFOR
Leslie E. Bryant, Auburn, N. Y., assignor to Nye-Wait Company, Inc., Auburn, N. Y., a corporation of New York
Application July 26, 1945, Serial No. 607,179
4 Claims. (Cl. 139—97)



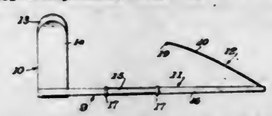
1. A portable loom creel comprising a wheeled frame having means for rotatably supporting a plurality of yarn packages, in combination with jack means for anchoring the creel against movement in the direction of delivery of the yarns from the yarn packages, said jack means being fixedly anchored at one end and having an adjustably movable part for abutting engagement with the creel.

2,437,071
MULTIPLE SMOKE DETECTOR
Clarence Noel Cahusac, Newark, and Frank B. Allen, Verona, N. J., assignors to C-O-Two Fire Equipment Co., Newark, N. J., a corporation of Delaware
Application October 2, 1945, Serial No. 619,743
6 Claims. (Cl. 177—311)

1. Apparatus for the purpose described comprising, a casing having a plurality of compartments with dividing walls arcuately arranged around a centrally located chamber, each compartment having an inlet for air and smoke and an outlet to said chamber, a source of light in said chamber, the chamber having an outlet for air and smoke and openings into each compartment whereby light rays from said source may pass through said openings into each compartment, a lens mounted in alignment with each opening to direct a beam of light across its compartment, a current generating photo-electric cell for each compartment and mounted therein in operative relationship to the beam of light therein, an indicating instrument mounted in the wall between two adjacent compartments and having an actuating coil connected across the series connecting leads joining the photo-electric cells of said adjacent compartments, said instrument having a movable member responsive to current from one of said cells with a pair of oppositely disposed cooperating contacts each connected to an alarm device.

2,437,072
BAG AND BAG HANDLE CONSTRUCTION
Norman H. Campbell, Toronto, Ontario, Canada
Application August 31, 1945, Serial No. 613,916
2 Claims. (Cl. 229—68)

1. In an assembled bag and handle structure, a handle consisting of a sheet of foldable stiff material of appreciable tensile strength, and folded to provide two major panel elements, each panel element being provided with an elongate hand aperture, and the line of fold between the panel elements being so located as to bring the hand apertures into register, an internal reinforcing sheet located between the major panel elements, and formed so as to avoid obstruction of the hand apertures, a bag or sack presenting a doubled portion of material along its upper margin and extended between the lower margins of the major panel elements, and holding means extending through the panel elements and the material of the bag adjacent said upper margin.

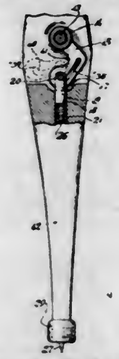


2,437,073
ELECTRIC CABLE CLAMP AND BOX
George Carlson, Bridgeport, Conn., assignor to General Electric Company, a corporation of New York
Application May 21, 1946, Serial No. 671,255
10 Claims. (Cl. 285—24.5)

1. An electric cable box having side and bottom walls with knockout openings adjacent the intersection thereof, a screw mounted in the box at the intersection and a clamping member loosely mounted on said screw, said clamping member having substantially flat walls extending at an angle to each other, said clamping member being movable to permit a cable to be inserted through either of said knockout openings so that one of the clamp walls engages and clamps the cable against the surface of the corresponding wall of the box upon tightening of the screw.

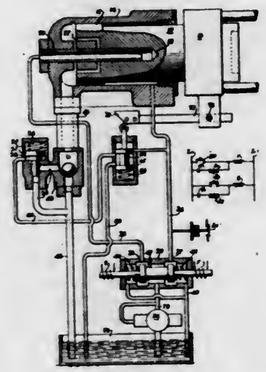
2,437,074
BOOKMARK
Harold E. Chapin, Los Angeles, Calif.
Application October 24, 1946, Serial No. 705,426
7 Claims. (Cl. 116—119)

2. A bookmark comprising mounting means for separable connection to a book cover, a flat spring arm extending laterally from said means to span diagonally across the thickness of a number of pages of said book, and a spring page marker carried by the free end of said arm and angularly directed toward the mounting means, said marker comprising a spring wire having less



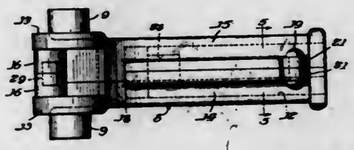
spring tension than the spring arm, whereby said marker, upon turning the page with which it is engaged, is flexed toward the spring arm and snaps back into engagement with the next topmost page.

2,437,075
GLYCERIDE OIL REFINING WITH FOOTS SOFTENING AGENT
Benjamin Clayton, Houston, Tex., assignor, by mesne assignments, to Benjamin Clayton, Houston, Tex., doing business as Refining Unincorporated
Continuation of application Serial No. 398,489, June 17, 1941, which is a division of application Serial No. 296,685, September 26, 1939. This application January 5, 1945, Serial No. 571,509
11 Claims. (Cl. 260—428)



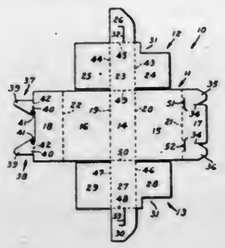
1. In the art of refining animal and vegetable oils wherein impurities are removed in the form of aqueous foots by centrifugal separation, the improvement which comprises the step of separating the foots by centrifugal separation in the presence of a softening agent for said foots selected from the group consisting of abietic acid, naphthenic acid, and water soluble soaps of such acids, the amount of said agent being sufficient to substantially soften said foots.

2,437,076
CRUTCH
Jerome H. Clemens, Chicago, Ill.
Application February 3, 1945, Serial No. 575,997
9 Claims. (Cl. 135—53)



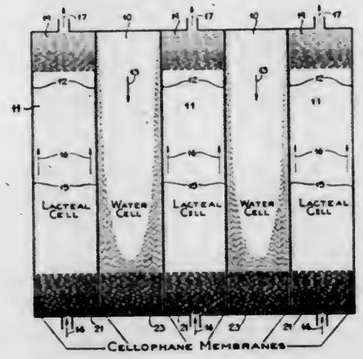
1. In a crutch having a tip, bowed supports, cam actuated prod means projectable beyond said tip, and a hand hold rotatably mounted between the said bowed supports, the said hand hold provided with an extension; slotted cam means in said extension, a forked member mounted on the upper end of said prod means and slidably secured to the extension of the said hand hold, and pin means articulately securing the said forked member to the said slotted cam means.

2,437,077
HYDRAULIC CIRCUIT FOR HALTING RECIPROCABLE RAMS
Lyndon C. Cole, Cleveland, Ohio, assignor to H-P-M Development Corporation, Wilmington, Del., a corporation of Delaware
Application January 18, 1946, Serial No. 641,991
6 Claims. (Cl. 60—52)



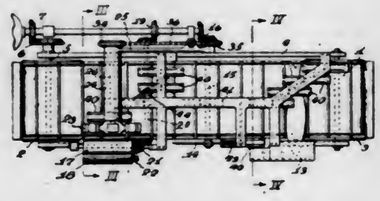
4. In a hydraulic system, a fluid motor having an inlet and an outlet; a pressure connection to said inlet and an exhaust connection to said outlet; a normally closed bypass valve means connected to said outlet; means responsive to a predetermined pressure of said inlet for actuating said valve means into an open position, said motor having a cam; other valve means having a part projecting into the path of said cam responsive to a predetermined movement of said motor; said cam being constructed and adapted to actuate said part for disconnecting said bypass valve means from said inlet pressure, and connecting the same to said exhaust.

2,437,078
LIFTING JACK
Charles A. Crane, Chicago, Ill.
Application April 17, 1946, Serial No. 662,815
3 Claims. (Cl. 74—523)



1. In a pawl carrier of the type described, the combination of an elongated member divided into two separable sections, one end of said member being provided with handle engaging means thereon, the opposite end of said member being forked to provide two spaced opposed ears, one ear being carried by each section of said member, axially aligned trunnions extending outwardly from the respective ears, a pair of axially aligned abutting pawl supporting members inwardly extending from the opposed faces of the respective ears and integrally formed with the latter, the axis of said pawl supporting members being spaced from the axis of said trunnions, and means for securing said sections together.

2,437,079
CONTAINER
Frank R. Curtiss, New Haven, Conn.
Application July 11, 1944, Serial No. 544,351
1 Claim. (Cl. 229—16)

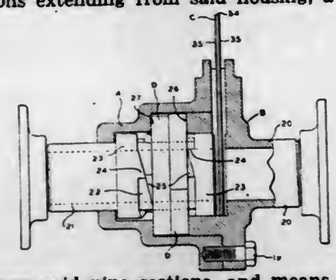


A blank for a folding carton comprising foldably joined front, top, rear and bottom panels; a pair of end panels foldably joined to opposed edges of said rear panel, a bottom flap foldably joined to each of said end panels and adapted to substantially cover said bottom panel interiorly of the erected container, and a clearance recess in each of said bottom flaps at the outer edge thereof, including a front locking panel foldably related to an edge of said bottom panel and having a pair of tabs for engaging a pair of locking flaps foldably joined to said end panels whereby said box may be secured in erected but open top condition for filling, and a pair of locking slits provided in the fold line between said bottom panel and said locking panel, including a pair of tabs foldably joined to a free edge of said front panel and insertable into said locking slits by virtue of the clearance provided by said clearance recesses in said bottom flaps.

2,437,080
FRACTIONATION OF LACTEAL LIQUIDS
Frederick K. Daniel, Kew Gardens, N. Y., assignor, by mesne assignments, to Sun Chemical Corporation, New York, N. Y., a corporation of Delaware
Application March 10, 1944, Serial No. 525,943
5 Claims. (Cl. 99—57)

1. A continuous osmotic diffusion and gravity stratification dialysis procedure comprising placing a lacteal fluid selected from the class consisting of cows' milk and cows' whey between vertical permeable membranes and placing water on the other sides of said membranes, permitting the free mineral salts and diffusable materials in the vertical layer of said lacteal fluid immediately adjacent the membrane to pass through the membrane into the water and water through the membrane into said vertical layer, whereby the specific gravity of said vertical layer will be reduced and then permitting said layer of reduced specific gravity to flow upwardly along the membrane and stratify at the top of the fluid, removing the reduced specific gravity upper strata from the top and introducing additional lacteal fluid at the bottom while maintaining the internal circulation due to change of specific gravity resulting from osmotic diffusion and without turbulence, the circulation within said fluid being solely due to gravity stratification.

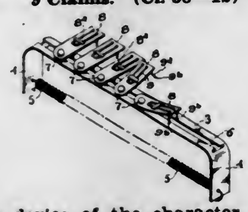
2,437,081
FISH DRESSING MACHINE
Paul Danielsson, Stora Essingen, Sweden, assignor to Arenco Aktiebolag, Stockholm, Sweden, a joint-stock company of Sweden
Application July 10, 1944, Serial No. 544,204
In Sweden July 13, 1943
1 Claim. (Cl. 17—3)



In a fish dressing machine, a conveyor for feeding the fish laterally, and a plurality of yielding members disposed above and extending longitudinally of said conveyor and having a successive relative displacement transversely as well as longitudinally of said conveyor to successively and yieldingly engage the upper side of a fish passing beneath them and displace the fish longitudinally by jamming over the tapered rear portion of the body of the fish.

2,437,082
WASH RESISTANT FILTER MEDIA
Herbert Leroy Davis, Highland Park, N. J., and Laurence R. B. Hervey, West Concord, Mass., assignors to Johnson & Johnson, a corporation of New Jersey
No Drawing. Original application April 18, 1942, Serial No. 439,550. Divided and this application July 11, 1944, Serial No. 544,473
2 Claims. (Cl. 210—203)

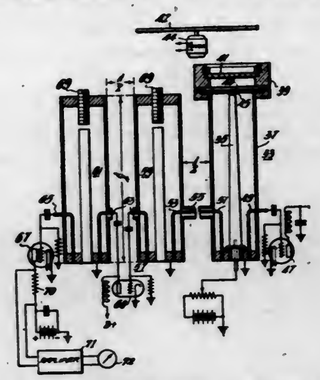
1. Wash resistant filter media, comprising a sheet-like structure of loosely associated fibers, the fibers near and at the surface of the sheet having wash resistance and being physically bonded at their points of contact by a sodium silicate bond having the property of being cold water non-dispersible upon drying and imparting said wash resistance to the surface of said sheet, the interstices between the points of contact of said fibers at and near the surface of said sheet and the interior fibers of said sheet being relatively free of said bond whereby fluids may be filtered through said sheet.



2,437,083
PIPE COUPLING
Eddie M. Dons, Tulsa, and Jesse V. Stevens, Oakhurst, Okla.
Application December 8, 1945, Serial No. 633,756
7 Claims. (Cl. 138—45)

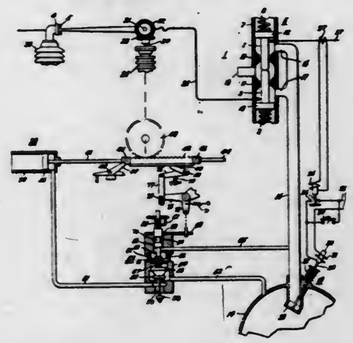
1. A pipe coupling comprising a housing, pipe sections extending from said housing, a gasket

between said pipe sections, and means for detachably clamping the gasket between said pipe sections, said clamping means comprising an oscillatory operating ring surrounding one of said pipe sections, the last mentioned pipe section being provided with cam members at opposite sides of said oscillatory operating ring, cam members carried by said opposite sides of the oscillatory ring cooperating with the first mentioned cam members to clamp and release the gasket, said oscillatory operating ring being confined in said housing at one side of said gasket so as to limit lateral displacement of said ring with relation to the housing, and a driving member extending from said operating ring, said driving member being movable in opposite directions to provide for said clamping and release of the gasket.



2,437,084
PLEAT HOLDING OR CLAMPING DEVICE
Simon Esecson, Malden, Mass.
Application July 9, 1946, Serial No. 682,402
9 Claims. (Cl. 38—12)

1. In a device of the character described, a strap member adapted to overlie a pressing board, spring means for securing said strap member to said board, elements riveted to said strap at spaced intervals, and pleat-securing members supported by said elements, said members having pointed portions adapted to be pushed through the pleats of a garment and into said board, said elements normally disposed in substantially the same plane as said strap member.



2,437,085
HEAT DETECTION DEVICE
John Evans, Kingston, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application March 12, 1943, Serial No. 478,969
13 Claims. (Cl. 73—362)

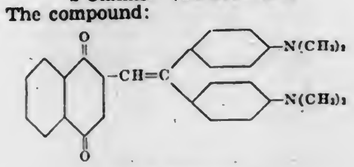
4. A heat detection device including in combination a radio frequency generator including a quarter wave concentric line, one end of said line including a capacitive element, said element having a heat absorption surface whereby the capacity of said element varies as a function of the heat to be detected, means effectively connected to said quarter wave line for amplifying

said radio frequency changes, detection means connected to said amplifier for converting said amplified radio frequency currents into a current corresponding to the frequency changes produced by the capacity changes of said element, and means for indicating said converted currents whereby said heat is indicated.

2,437,086
CONTROL FOR PRESSURE OPERATED SWITCHES
Edward J. Frank and Charles S. Keller, Springfield, Pa., assignors to General Electric Company, a corporation of New York
Application November 30, 1944, Serial No. 565,835
3 Claims. (Cl. 200—82)

1. In an electric circuit interrupter comprising a pair of relatively movable arcing contacts and a pair of relatively movable isolating switch contacts serially arranged with said arcing contacts, a first fluid motor for causing relative movement of said arcing contacts, a second fluid motor for causing relative movement of said isolating contacts, a source of fluid under pressure, means including a blast valve for interconnecting said source and said first fluid motor, means including a switch opening valve for interconnecting said source and said second fluid motor, means for opening said blast valve, means responsive to the

opening of said blast valve for opening said opening valve, a latch for holding said opening valve in the open position, means for causing said latch to perform said latching function upon operation of said last mentioned means, and means operative when said isolating contacts reach their open position for releasing said latch with the resultant closing of said opening valve.



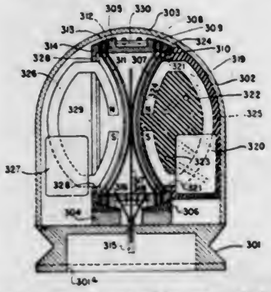
2,437,087

CONDENSATION PRODUCTS OF QUINONES WITH ACTIVE ETHYLENE COMPOUNDS

Marshall De Motte Gates, Jr., Arlington, Va.

No Drawing. Application December 22, 1944, Serial No. 569,423
2 Claims. (Cl. 260—396)

2. The compound:

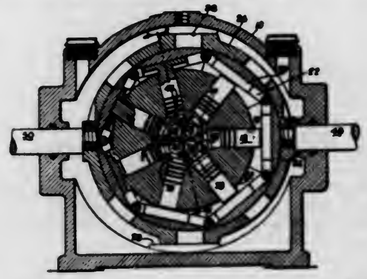


2,437,088

MICROPHONE ASSEMBLY

Gabriel M. Giannini, West Los Angeles, Calif., assignor, by mesne assignments, to Automatic Electric Laboratories, Inc., Chicago, Ill., a corporation of Delaware

Original application March 22, 1943, Serial No. 480,028. Divided and this application October 8, 1945, Serial No. 621,062
5 Claims. (Cl. 179—116)



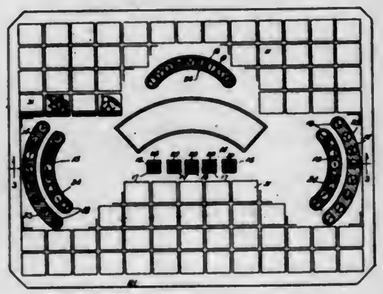
1. A microphone assembly comprising a casing, a frame disposed in said casing, a first diaphragm supported by one side of said frame, a second diaphragm supported by the other side of said frame, first magnetic structure disposed between said first diaphragm and one side wall of said casing and cooperating with said first diaphragm, a first winding coupled to said first magnetic structure, second magnetic structure disposed between said second diaphragm and the other side wall of said casing and cooperating with said second diaphragm, a second winding coupled to said second magnetic structure, and a block of water impervious material sealing said one side of said frame to said one side wall of said casing and embedding said first magnetic structure and said first winding, said block being spaced from said first diaphragm to define a chamber therebetween and having sound passages formed therein out of contact with said first magnetic structure and said first winding and communicating between said chamber and the exterior through connecting openings provided in said one side wall of said casing, whereby said first diaphragm communicates directly with sound from the exterior, said other side wall of said casing partially shielding said second diaphragm from sound from the exterior.

2,437,089

PINTLE PORTING

George M. Geiger and Walter Ernst, Mount Gilead, Ohio, assignors to H-P-M Development Corporation, Wilmington, Del., a corporation of Delaware

Application October 27, 1944, Serial No. 560,676
8 Claims. (Cl. 103—161)



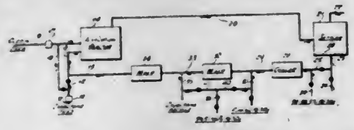
1. In a fluid operable pump having a valve member and variable capacity pumping means adapted for transferring fluid from an inlet to an outlet in said valve member, the improvement comprising forming said inlet so that communication is had between said inlet and said pumping means until the latter has attained its maximum capacity and has commenced discharging.

2,437,090

EDUCATIONAL TOY

Ira Gold, Chicago, Ill.

Application October 5, 1945, Serial No. 620,476
1 Claim. (Cl. 35—74)



An educational toy comprising a base, a pair of spaced pins attached to opposite portions of said base, a major disc rotatably mounted on each of said pins, a minor disc rotatably mounted on each of said pins, spacers spacing said major discs vertically from said minor discs, a third pin attached to said base between said pair of pins, a third disc rotatably mounted on said third pin, all of said discs having a marginal circle of spaced letters and spaced inwardly therefrom a ring of letters, said circle of said minor discs spaced from said ring of said major discs so as not to overlap same, a cover attached to said base, said cover having curved slots for exposing portions of said rings of letters of all of said discs so that said discs may be turned from the front of the toy, said cover also having a plurality of spaced windows each exposing one at a time of the letters of said circles of each of said discs, said windows being in alignment so that the letters exposed through said windows may spell out a word, said discs adapted to be moved until desired letters of said rings are positioned at the lowermost corners of said slots to produce corresponding letters of said marginal circles to be exposed through said windows.

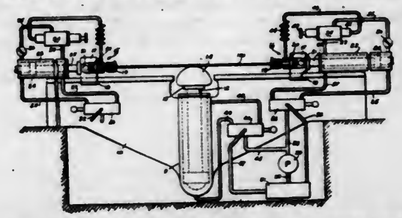
2,437,091

SULFURIC ACID FORTIFICATION IN ISOPARAFFIN ALKYLATION

Arthur R. Goldsby, Beacon, and Claude W. Watson, Eastchester, N. Y., assignors to The Texas Company, New York, N. Y., a corporation of Delaware

Application January 23, 1945, Serial No. 574,137
5 Claims. (Cl. 260—683.4)

1. In the continuous alkylation of an isoparaffin with an alkylating agent in the presence of H_2SO_4 catalyst of alkylation strength in a reaction zone, wherein alkylation reaction products from the reaction zone are separated into hydrocarbon and catalyst phases, and a substantial proportion of the separated catalyst phase is recycled to the reaction zone and the balance is discharged, the improvement which comprises chilling the recycle acid stream to about 20–30° F., adding to the chilled recycle acid stream a stream of fuming sulfuric acid, promptly agitating the mixed streams to avoid localized overheating, controlling the strength and amount of fuming acid added in accordance with the water content of the recycle acid to thereby reduce the water content of the latter to less than 1% by weight while avoiding any residual free SO_3 in the fortified recycle stream, controlling the chilling of the recycle acid and the mixing of the fuming acid therewith so that the heat liberated does not raise the temperature of the agitated mixture above about 40° F., and returning the resultant fortified recycle acid to the reaction zone in an amount to maintain the system acid therein at a titratable acidity between 80 and 90%, with a water content of less than 4% by weight.



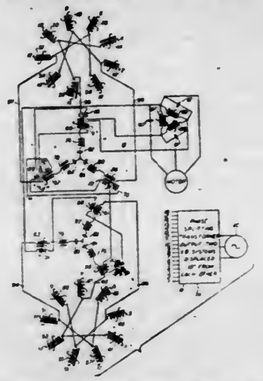
2,437,092

METAL-STRETCHING PRESS

Arthur M. Greene, Jr., Princeton, N. J., and Walter Ernst, Mount Gilead, Ohio, assignors to H-P-M Development Corporation, Wilmington, Del., a corporation of Delaware

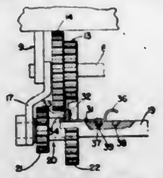
Application September 22, 1944, Serial No. 555,238
11 Claims. (Cl. 153—48)

10. A method of forming workpieces from sheet material which comprises, rigidly gripping a sheet of material along at least two edges thereof, effecting relative movement between said sheet and a forming member so as to form the workpiece, and automatically maintaining a positively controlled tension in said sheet at a substantially predetermined constant amount throughout the whole of said relative movement and the entire formation of said workpiece by automatically positively paying out said rigidly gripped edges of said sheet at substantially right angles to the plane of said forming member in response to said tension.



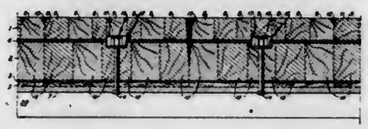
2,437,093

MAGNETIC FREQUENCY CHANGER



Henry Martin Huge, Lorain, Ohio, assignor, by mesne assignments, to Lorain Products Corporation, Lorain, Ohio, a corporation of Ohio

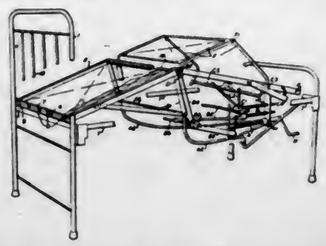
Application May 13, 1944, Serial No. 535,479
31 Claims. (Cl. 172—281)



29. In combination, a saturable magnetic core structure comprising a plurality of core members in three sections arranged magnetically in series, each section having three primary core members in parallel with each other, and in parallel with a secondary core member, a primary winding on each of said primary core members adapted to be energized from a polyphase source of alternating current, the three primary windings in each section being star-connected to a substantially symmetrical three-phase system, the phase displacement between the induced voltage from adjacent primary core members magnetically in series with each other being substantially twenty electrical degrees, the phase displacement between the induced voltages from adjacent primary core members in parallel with each other being substantially 120 electrical degrees, a secondary winding on each secondary core member, the three secondary windings being adapted to have induced in them three-phase voltage of a frequency three times the frequency of the alternating current source, and three capacitors in series with the three secondary windings in a star-connected circuit connected to the three star-midpoints of the primary windings, output circuit means comprising substantially equal output windings on each of said secondary core members, the output windings being connected in series, and a fourth capacitor shunted by a saturable inductance energized from said output windings.

2,437,094
GEAR SHIFTING MECHANISM FOR GRAIN DRILLS OR THE LIKE
William A. Hyland, Horicon, Wis., assignor to John Deere Van Brunt Company, a corporation of Wisconsin
Application December 22, 1945, Serial No. 636,840
3 Claims. (Cl. 74—342)

1. In a grain drill, a shaft, a gear member slidable thereon, said shaft having a pair of axially spaced recesses therein, and gear shifting and holding means comprising a flat spring member adapted to extend for the major portion of its length along said shaft and having at one end a radially outwardly turned portion and means securing said outwardly turned portion to said gear, the opposite end portion of said spring member having a lug thereon engageable in either one or the other of said recesses in the shaft, depending upon the position of said gear thereon, and said spring member having outwardly of said stud an integral radially outwardly curved generally hook shaped section serving as a finger hold by which said spring member may be swung outwardly to disengage the stud from the recess and when the lug is so disengaged said finger hold may be used to shift said gear into another position on said shaft.

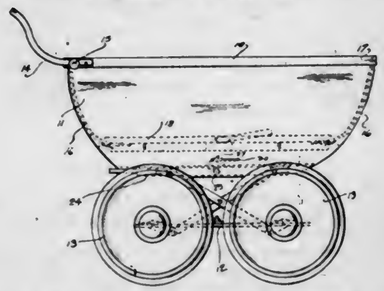


2,437,095
WOODEN DECK COVERING ON SHIPS
Gustaf Kähr, Stockholm, Sweden
Application November 29, 1943, Serial No. 512,227
In Sweden September 29, 1943
4 Claims. (Cl. 114—85)

1. In a ship, a floor structure comprising a series of supporting beams arranged transversally of the ship and a wooden deck covering composed of comparatively long and narrow boards with grooves between them and fixed to the upper surfaces of the beams, a filling of glue in the majority of the grooves between the long and narrow boards and a filling of fibrous material having an elastic action in the remaining grooves between the boards, the number of which grooves is only a small fraction of the grooves filled with glue.

2,437,096
HOSPITAL BEDSTEAD
Hassanally Khimji Khakiani, Bombay, British India
Application June 11, 1943, Serial No. 490,501
In British India June 11, 1942
15 Claims. (Cl. 5—69)

1. In a hospital-type bedstead installation, the combination of a mattress supporting frame, leg-rest and back-rest mattress sections arranged end to end and supported upon said frame, means pivotally connecting the adjacent ends of the sections, operating means for applying a force to the pivoted end of the leg-rest section and tending to move the same in an inclined longitudinal direction, means at the footend of the leg-rest

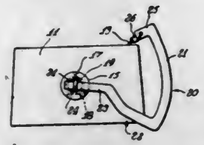


section to restrain the latter from moving longitudinally whereby the force applied by the operating means is rendered effective to variably elevate the pivoted end of the leg-rest section, and operating means for moving the back-rest section about said pivot means.

2,437,097
GETTER STRUCTURE
Aden J. King, Syracuse, N. Y., assignor to King Laboratories Inc., Syracuse, N. Y., a corporation of New York
No Drawing. Application January 5, 1945, Serial No. 571,537
3 Claims. (Cl. 250—27.5)

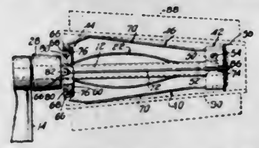
1. A getter structure comprising a support formed of thin sheet nickel, a quantity of getter material positioned on said support, said material comprising a mixture of

	Parts by weight
Powdered alloy (25 to 75% barium, 75 to 25% aluminum)	100
An oxide of nickel	15 to 40



2,437,098
BABY CARRIAGE WITH DETACHABLE BODY
Samuel Kroll and Nathan J. Kroll, Chicago, Ill.
Application June 26, 1944, Serial No. 542,123
2 Claims. (Cl. 296—35)

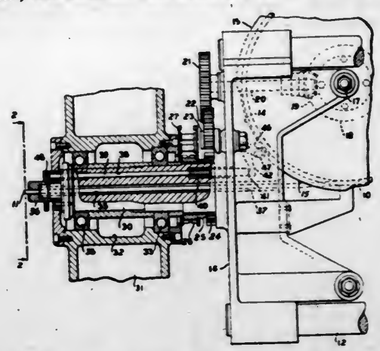
1. A baby carriage including a chassis having opposite side rails, a member extending transversely of the chassis and supported by the side rails, a keeper lug carried by said member and extending upwardly therefrom, a carriage body, a mounting member in said body and having an elongated slot formed therein registering with an elongated slot formed in the body, said keeper lug being adapted to project through said slots



when said body is mounted on said side rails, and a latch lever pivotally carried by said mounting member and adapted to have latched engagement with said keeper lug for releasably latching said body upon said side rails.

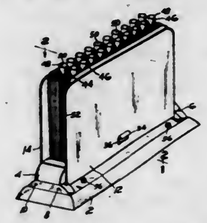
2,437,099
COMBINATION HANDLE AND CLOSURE MEANS FOR HANDBAGS
Louis Krupp, Brooklyn, N. Y.
Application July 25, 1945, Serial No. 606,951
4 Claims. (Cl. 150—42)

4. In a hand bag having a front wall and a rear wall and slide fastener closure means therefor, a combination rigid substantially L-shaped handle member and closure operating means comprising a hand grip leg and a substantially right-angular arm depending therefrom, said closure means including a grip tab, means connecting said grip tab with the forward end of said hand grip leg, a swivel mounted in said front wall, the lower end of said arm being secured to said swivel.



2,437,100
AUXILIARY BOBBIN SUPPORT FOR USE ON THE SHANK OF A BOBBIN HOLDER
Fritz Lambach, Tenafly, N. J.
Application October 16, 1944, Serial No. 558,838
19 Claims. (Cl. 242—130)

1. An auxiliary bobbin support adapted to be mounted on a bobbin holder having a shank provided with bowed springs having their free ends slidably engaging the shank for receiving a cylindrical bobbin tube, comprising a substantially conical-shaped body for the support of a conical bobbin tube, said body having a first aperture near one end adapted to be passed over said bowed springs into a mounting position near one end of said shank, and said body having a second aperture spaced from said first aperture and adapted to be engaged with the other end of said shank.

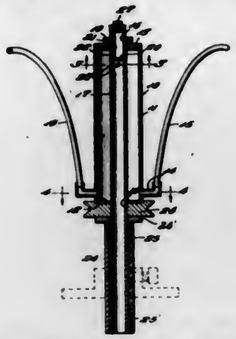


2,437,101
LENGTH MEASURING APPARATUS IN COMBINATION WITH A TWISTING MACHINE
Elmer J. Larsen and Oscar G. Nelson, Baltimore, Md., assignors to Western Electric Company, Incorporated, New York, N. Y., a corporation of New York
Application July 23, 1942, Serial No. 452,028
7 Claims. (Cl. 33—129)

4. A measuring apparatus in combination with a twisting machine having a flier to twist advancing material, a hollow shaft to rotatably support the flier and a rotatable member in the flier to advance the material, which comprises a counter unit to register the length of the twisted material, the counter unit being mounted externally

of the flier, an element in the flier movable with the material, and mechanism extending from the counter unit, through the said shaft and into the flier for actuation by the element to actuate the counter unit.

2,437,102
INDEX DEVICE
Raymond B. Larter, Los Angeles, Calif., assignor of one-half to Leonard J. Hull, Los Angeles, Calif.
Application December 29, 1945, Serial No. 638,021
7 Claims. (Cl. 129—15)



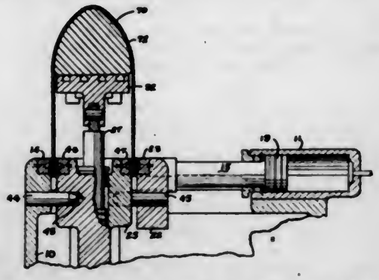
2. In an indexing device of the class described comprising a longitudinal base, a pair of upright members each mounted upon the respective end of said base, a pair of hinged covers mounted between said pair of uprights and providing a space therebetween, a longitudinal plate mounted between said uprights and within said space between said covers, a lock means at each side of said plate for engaging a passage in said covers, a spring at each end of said plate for holding said covers in locked position by urging said lock means into place, a pair of rings mounted upon said longitudinal plate for mounting index cards and index sheets thereon, and selector means on each of said index cards for selectively actuating the disengagement of said lock means and thereby causing said covers to open.

2,437,103
CENTRIFUGAL PUMP
John F. Leach, Childress, Tex.
Application March 2, 1946, Serial No. 651,527
3 Claims. (Cl. 103—113)

1. A centrifugal pump comprising a tubular supporting member, a feed pipe, one end of the feed pipe being mounted in the tubular support-

ing member to rotate about its longitudinal axis, an elongated tubular chamber carried by and enclosing a portion of the feed pipe that projects beyond the supporting member, said feed pipe having radial openings near its end remote from the supporting member, said openings establish-

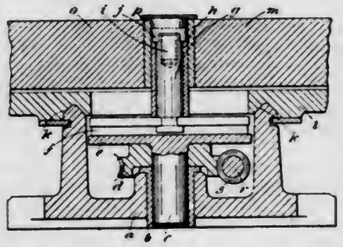
ing communication between the pipe and the chamber, discharge nozzles radiating from the tubular chamber adjacent the end nearest the supporting member and means on the pipe between the supporting member and the chamber to impart rotary motion to the feed pipe and the chamber.



2,437,104
FOOD PRODUCT AND PROCESS OF PRODUCING SAME
Royal Lee, Milwaukee, Wis., assignor to Lee Foundation for Nutritional Research, Milwaukee, Wis., a corporation of Wisconsin
No Drawing. Application September 4, 1943, Serial No. 501,281
6 Claims. (Cl. 99—206)

1. A process for producing a dry, water-soluble, fruit juice concentrate, which comprises admixing a calcium-bearing phytate in a fruit juice containing an organic acid of the class consisting of citric and malic acids to form a liquid solution, the proportions of phytate and acid of the juice being of the same order of magnitude and said phytate and juice solids constituting essentially the entire portion of the solids in the solution, and dehydrating the liquid so formed into a dry, relatively non-hygroscopic, water-soluble product.

2,437,105
METAL-STRETCHING PRESS HAVING SLIDABLE PLATEN SUPPORTS PROVIDED WITH CLAMPING FACES
Robert J. Lindsey, Mount Gilead, Ohio, assignor to H-P-M Development Corporation, Wilmington, Del., a corporation of Delaware
Application December 8, 1944, Serial No. 567,159
13 Claims. (Cl. 153—48)

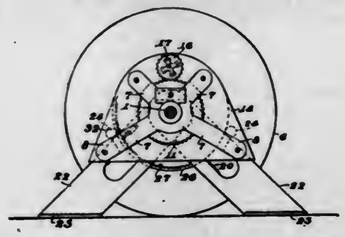


1. In a stretching press, a press block having a plurality of parallel cylinder bores therein, a plunger reciprocable in each bore, a platen, a pivotal connection between one plunger and said platen, a sliding pivotal connection between each remaining plunger and said platen, said block having generally parallel clamp faces along opposite sides thereof in planes substantially parallel to the plane of said plungers, and a press frame, having track means on which said block is guided for translation substantially normal to said planes.

11. A stretching press comprising a press block, a platen, motor means for effecting relative movement between said block and platen, said block having a pair of clamp faces on opposite sides thereof, a press frame slidably supporting said block and having a clamp face cooperable with one of the faces on said block, a press bar slidable on said frame and having a clamp face

cooperable with the other of the clamp faces of said block, motor means for forcing said cooperable clamp faces together to clamp a workpiece therebetween, and cooperating means carried by said frame, bar and block and operable when said clamp faces have been forced together to maintain the said frame, bar and block substantially rigid against the thrust of said platen on the clamped workpiece.

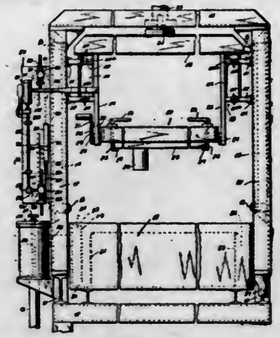
2,437,106
GRINDING OR LIKE MACHINES
Harry Livingstone, Longsight, Manchester, and William Edward Rogers, Timperley, Altrincham, England, assignors to Manchester Repetition Engineers Limited, Longsight, Manchester, England, a British company
Application September 7, 1946, Serial No. 695,498
In Great Britain September 20, 1945
4 Claims. (Cl. 51—166)



1. Means for obtaining a circular movement of a tool or of a workpiece, comprising a base which is fixed with respect to a machine tool, a slotted table rotatably mounted on the base, a lower slide arranged to slide in a fixed direction with respect to the base and having a central aperture, a top slide adapted to carry a tool or workpiece and arranged to slide on the lower slide in a direction at right angles to the direction of movement of the lower slide, and a driving pin having one end fixed in the slot of the table in an eccentric position and adjustable with respect to the axis of the table and the other end journalled in the top slide, and passing through the aperture of the lower slide, so that rotation of the table produces a circular movement of the top slide.

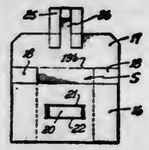
2,437,107
APPARATUS FOR FORMING AXLE BEARINGS
Lee J. Lyons, Webster Groves, Mo.
Application February 23, 1944, Serial No. 523,512
4 Claims. (Cl. 22—123)

1. In apparatus for casting liner metal in a railway axle journal bearing, a mandrel arranged to cooperate with the bearing to form a mold for liner metal, a holding member abreast of but spaced from the mandrel far enough to freely accommodate the positioning of a bearing between the mandrel and the member, a device carried by said member and operable to clamp the bearing against the mandrel, the member forming a conduit for cooling fluid and having outlets adjacent said device for discharging the fluid against the back of the bearing.



2,437,108
CHOCK FOR AIRCRAFT AND OTHER VEHICLES
Martin J. Madison, Oteen, N. C.
Application June 27, 1945, Serial No. 601,855
6 Claims. (Cl. 188—5)

1. The combination of a vehicle frame, a wheel rotatably carried by said frame, a pair of chocking members also carried by said frame and restrained to move in paths angularly related to each other and radially with respect to said wheel, and means to simultaneously shift said members into extended and retracted positions.

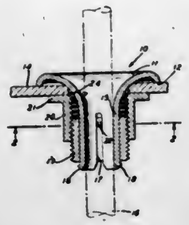


2,437,109
DIPPING MACHINE
Lloyd E. Maquat, Easton, Conn., assignor to The Black Rock Manufacturing Company, Bridgeport, Conn., a corporation of Connecticut
Application February 25, 1941, Serial No. 380,452
9 Claims. (Cl. 18—24)

1. In a dipping machine, a receptacle, a frame, a carrier mounted by said frame for guided movements toward and from the contents of the receptacle, means for mounting forms on said carrier, hydraulic means for moving said carrier in the frame to carry the forms into and out of the contents of the receptacle, said hydraulic means including a piston and cylinder construction, a source of liquid under pressure, valve means for distributing such liquid to the cylinder at opposite sides of the piston to lower and raise the carrier, a pair of valves comprising a fast and a slow valve controlling the passage of said liquid under pressure to the distributing valve, means whereby said fast valve is open and said slow valve is closed during movements of the forms toward and from the contents of the receptacle and said fast valve is closed and said slow valve is open during movement of the forms

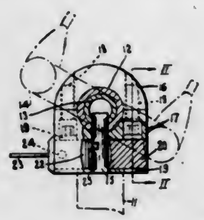
into and out of and while in the said contents of the receptacle, and said means for opening said slow valve including a cam whereby the rate of opening of said slow valve is controlled by the contour of said cam.

2,437,110
PACKAGE
Milton T. Marler, Los Angeles, Calif.
Application June 24, 1944, Serial No. 541,864
1 Claim. (Cl. 229—37)



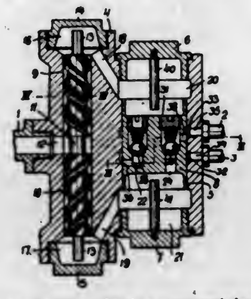
A package comprising: a blank of paper or like material having a back section; a front section foldable on the back section, a closure flap; end flaps on the ends of the back section foldable inwardly between said front and back sections; and fastening means for securing said closure flap folded on said front section, comprising a strap secured at its ends to said front section, an H-shaped extension on said closure flap foldable transversely along a line coinciding with that edge of the transverse portion thereof adjacent the closure flap, said extension extendable in its folded form beneath said strap a distance sufficient to project that edge of said transverse portion nearest the closure flap beyond that edge of said strap furtherest from the closure flap, and a tongue on said closure flap between the legs of said extension, said tongue extendable over said strap and then beneath said transverse portion at that projecting edge thereof nearest the closure flap.

2,437,111
CABLE CLAMP
Edward E. McKeige, Cranford, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a corporation of New York
Application December 6, 1944, Serial No. 566,925
8 Claims. (Cl. 24—115)



2. A cable clamp comprising a hollow body for receiving a cable extending longitudinally therethrough, the body being receivable in an aperture

of a support and having outwardly projecting ends, one of which is longitudinally slotted to form resilient portions, and operatively connected elements disposed upon the body and movable relative to each other to respectively engage the



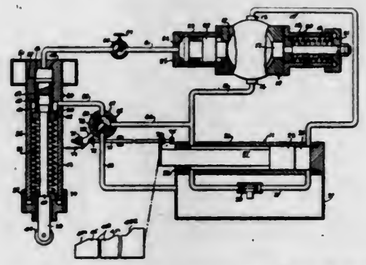
support and the slotted end to cause the resilient portions to clamp the cable and cause clamping of the support adjacent the aperture between the other outwardly projecting end and the adjacent element.

2,437,112
CYCLE OR LIKE LOCKING MECHANISM
Alfred Milwain, Coventry, England, assignor of two-thirds to Herbert Harold George Hitchcox and Annie Hitchcox, both of Coventry, England
Application November 29, 1946, Serial No. 713,147
In Great Britain June 16, 1943
Section 1, Public Law 690, August 8, 1946
Patent expires June 16, 1963
5 Claims. (Cl. 70—185)

1. A locking means for a cycle or the like having a fixed steering head and, supported therein, the stem of a steerable front fork, the locking means comprising a casing having parts adapted to be clamped together so as to embrace the steering head, a key-actuated lock secured in the casing, the lock having a movable element to coact with a catch to hold the catch either in an operative position in which it is adapted to extend through a hole in the steering head into a hole in the stem of a front fork or in an inoperative position in which the catch will be free from engagement with the hole in the stem of the front fork, members for clamping the parts of the casing together housed in the interior of the casing, one of said members being normally covered by the lock, and a plug located in the casing by interengagement with the catch in all positions of the latter, the plug normally covering the other of said members to thereby prevent removal of the casing without disturbing the lock and the plug.

2,437,113
FLUID REGULATING DEVICE
Carl Oscar Josef Montelius, Stockholm, Sweden, assignor to Aktiebolaget Imo-Industri, Stockholm, Sweden, a corporation of Sweden
Application June 2, 1943, Serial No. 489,344
In Sweden May 20, 1942
1 Claim. (Cl. 137—166)

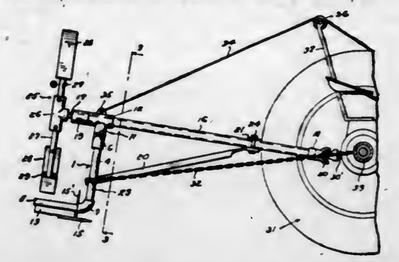
A fluid regulating device comprising two positively operating hydraulic motors mechanically connected to each other, a common fluid piping connected to one end of each of said motors, a cylinder, a piston movable in said cylinder, a conduit for connecting the other end of one of said motors with one side of said piston, a conduit for connecting the other end of the other one of said motors with the other side of said piston, two separate fluid pipings connected to said cylinder, the areas of connections of said pipings to the cylinder being controlled by said piston, four passages in said piston, one pair of said passages communicating with one of said conduits and one of said separate pipings, the other pair of said passages communicating with the other one of said conduits and the other one of said separate pipings, a non-return valve in each of said passages, the non-return valves in each pair of passages being arranged to permit flow of fluid in opposite directions, and said piston being arranged to be displaced in said cylinder in response to differences in pressure on opposite sides of the piston to vary the cross-sectional area for the flow of fluid between said motors and said separate pipings to increase throttling action upon flow through the motor having a lowered pressure occurring at its discharge, whereby to reestablish the normal proportion of flow through said separate pipings.



2,437,114
CONTAINER
George Arlington Moore, New York, N. Y., assignor to National Biscuit Company, New York, N. Y., a corporation of New Jersey
Application December 10, 1942, Serial No. 468,502
2 Claims. (Cl. 229—5.5)

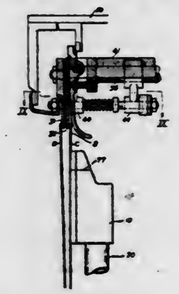
1. A container having an open ended rectangular body formed from a single piece blank of fibrous material having transverse score lines to provide five panels, two of which overlap to form one side wall, a cover made of fibrous material having a rectangular base set in from an end

of the body and fitting against the four walls, four upturned flanges extending from the four sides of the base to the end of the body walls and in contact therewith, an outer flange joined to each of the four upturned flanges by an intermediate flared section and lying against the outside of the body walls, said intermediate flared sections contacting the edges of the body and the edges of adjoining flared sections abutting, all abutting edges and surfaces of said body and cover being coated, bound together and waterproofed by a heat sealed thermo plastic coating.



2,437,115
MECHANICALLY ACTUATED HYDRAULIC CONTROL SYSTEM FOR PUMP CONTROL
Johan A. Muller and Warren R. Tucker, Dayton, Ohio, assignors to H-P-M Development Corporation, Wilmington, Del., a corporation of Delaware
Application November 11, 1943, Serial No. 509,853
7 Claims. (Cl. 60—52)

7. In a fluid flow controlling apparatus, a source of fluid pressure, a reversible motor, hydraulic connections between said source and said motor including control means movable from a first position causing operation of said motor in one direction, through neutral, to a second position causing operation of said motor in a reverse direction, yielding means urging said control means into said first position, force transmitting means operable from a first to a second position to move said control means into said second position, means operated by said motor in one position, including energy storing means for urging said transmitting means into said second position, a pressure connection from said source operable to maintain said force transmitting means in said second position, and means operated by said motor in a second position to vent said connection and permit said yielding means to return said control means to first position.

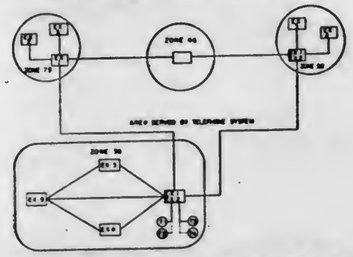


2,437,116
SNOW PLOW
Parnell H. Oppegaard, McIntosh, Minn.
Application June 24, 1946, Serial No. 679,015
6 Claims. (Cl. 37—43)

1. In a snow plow for attachment to a tractor having a rear power take-off shaft, a drag frame adapted to be pulled forwardly by the tractor, a scraper blade on said frame adapted to dig forwardly into snow in the path of travel of said frame and pick up the same, a platform member on said frame in the rear of said blade adapted to accumulate snow thereon picked up by said blade, and means to break up the snow on the platform member and scatter the same to one side of the path of travel of the frame including a rotary operating shaft having a rear end journalled on said frame against endwise movement forwardly thereof to exert a pull on said frame

and provided on the front end thereof with a universal coupling adapted to be connected to said take-off shaft.

2,437,117
BAG FEEDING MACHINE WITH BAG OPENING AND EXPANDING MEANS
Gustaf Örström, Alsten, Sweden, assignor to Arenco Aktiebolag, a Swedish joint-stock company
Application March 13, 1943, Serial No. 479,114
In Sweden March 20, 1942
1 Claim. (Cl. 226—59)



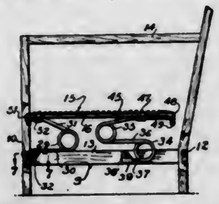
In a bag opening and suspending mechanism for machines for feeding and filling bags each having a notch in one side wall at the upper end thereof, a pair of clamp members, a pair of flat plates located between said clamp members, said clamp members being normally spaced from the respective adjacent plates, said plates having flat tongues narrow enough to pass through said notch of said bag wall and projecting beyond one of the juxtaposed clamp members and being located in a position corresponding to said notch of said bag wall, a suction head for holding a collapsed bag by its wall having said notch, means for moving said suction head transversely past said juxtaposed clamp member and both said plates to allow the bag wall having the notch to pass said plates by lateral movement and to cause the other bag wall to engage and be detained by one of said tongues to partially open the mouth of the bag, means for then shifting the direction of movement of said suction head to move longitudinally of and towards said plates and thereby to slide the bag thereon, means for then moving said clamp members towards said plates to clamp the bag walls thereto, and means for then moving said plates together with said clamp members apart to complete the opening of the bag.

2,437,118

AUTOMATIC TELEPHONE SYSTEM HAVING RATING INDEPENDENT OF ROUTING

John E. Ostline, Chicago, Ill., assignor to Automatic Electric Laboratories, Inc., a corporation of Delaware

Original application August 26, 1940, Serial No. 354,301. Divided and this application July 20, 1942, Serial No. 451,622
25 Claims. (Cl. 179—7.1)



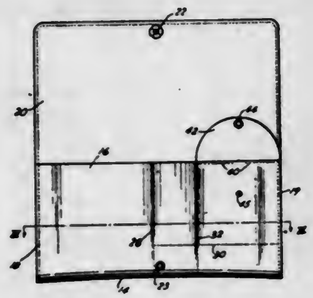
1. In a telephone system including a plurality of exchanges, switching apparatus for establishing connections between said exchanges, and register mechanism individually included in said exchanges; the register mechanism included in any given exchange comprising means for registering a code including either a first number of digits or a second number of digits, means for translating said registered code into an appropriate routing control corresponding to a predetermined route between said given exchange and the particular exchange designated by said registered code, means for governing said switching apparatus in accordance with said routing control, thereby to establish a connection between said given exchange and said particular exchange via said predetermined route, and means controlled in accordance with the code registered in said registering means and independent of said predetermined route translated by said translating means for establishing a rate factor applicable to said established connection.

2,437,119

SPRING SEAT CONSTRUCTION

Stanley Overby, Inglewood, and Charles S. Viall, Sr., Los Angeles, Calif.; said Viall assignor to said Overby

Application October 15, 1943, Serial No. 506,328
2 Claims. (Cl. 155—50)



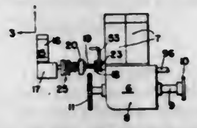
1. In a seat construction, a framework, a frame for supporting a seat, resilient means supporting the frame on the framework, said means including spring elements each of which comprises two vertically disposed and oppositely wound coils having a horizontally disposed leg connecting the coils in laterally offset relation to each other, the upper coil having an upwardly inclined terminal leg extending from the upper coil and provided with an angular extension, and the lower coil having a terminal leg projecting in a direction substantially opposite to that portion of the terminal leg that stems from the upper coil, the terminal leg of the lower coil being provided with an angular extension, means clamping the first-named terminal leg and its therewith angular extension to the frame, and a channeled bracket for clamping the second terminal leg and its therewith angular extension to the framework to prevent vertical and rotative movement of said leg, to functionally interpose both coils in the spring support of the seat-supporting frame.

2,437,120

COMPACT

Ruth F. Parker, Memphis, Tenn.

Application January 2, 1947, Serial No. 719,740
2 Claims. (Cl. 132—79)



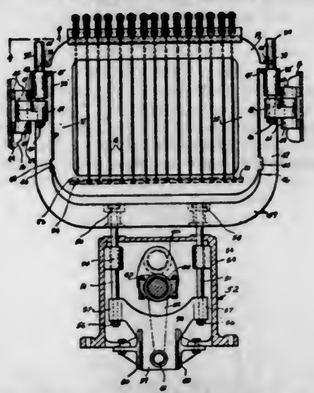
1. A compact, including a rectangular sheet as of leather, folded to establish a front, a back and a cover of an elongated holder, said front and back being stitched together along their end edges to complete said holder, said cover being adapted to overlie said back and means detachably securing the lower edge of said cover to said back; a pair of linings within said holder, both said linings being interposed at one end between said front and back and secured by one said end stitchings, a first of said linings being coextensive in length with said holder and being interposed between the opposite ends of said front and back and secured by the other said end stitching, the second said lining being interposed between said first lining and said back, both said linings being secured intermediate the length of said holder to said back by a vertically disposed line of stitching to establish between said first lining and said back a vertical pocket as for the reception of a package of cigarettes, and between said linings a pocket for a powder puff, the second said lining between the first said intermediate line of stitching and the first secured ends of said linings being secured to said back by a second intermediate vertically disposed line of stitching, effecting with said back a pocket for face powder, and a pocket as for a lip stick, said second lining being secured to said back along the lower edge of said lining to establish a bottom at least for said powder pocket, said second lining having therethrough a window for passage of powder from said powder pocket to a puff within said puff pocket, and a restraining screen as of fine mesh cloth secured over said window, said window being offset longitudinally of said holder with respect to the center of said puff pocket to effect delivery of powder to an edge portion only of said puff.

2,437,121

STARTING CONTROL MECHANISM FOR INTERNAL-COMBUSTION ENGINES

Harry E. Petersen, Waterloo, Iowa, assignor to Deere Manufacturing Co., a corporation of Iowa

Application November 19, 1945, Serial No. 629,614
12 Claims. (Cl. 123—179)



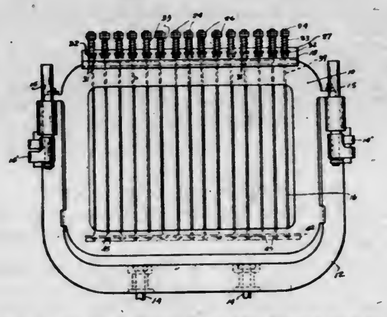
1. In starting mechanism for an internal combustion engine having a starting gear, the combination of a starting motor, a drive shaft, a clutch for disengageably connecting said starting motor with said drive shaft, a pinion mounted on said drive shaft to be driven thereby and shiftable axially thereon into and out of engagement with said starting gear, means for braking said pinion and drive shaft responsive to shifting said pinion away from said drive gear, and control elements connected with said clutch and said pinion, respectively, said elements having parts interengageable when said braking means is in braking position to prevent movement of said clutch control element into clutch engaging position, said parts being disengaged by moving said pinion control element to disengage said braking means.

2,437,122

KNIFE FRAME ATTACHING MEANS FOR MULTIPLE RECIPROCATING BLADE BREAD SLICING MACHINES

Charles H. Petskeyes, Davenport, Iowa, assignor to Gellman Manufacturing Company, Rock Island, Ill., a corporation of Illinois

Application June 9, 1945, Serial No. 598,457
1 Claim. (Cl. 146—153)



A bread slicing machine including a housing comprising a pair of saddles adapted to reciprocate in opposite directions with respect to each other, means for reciprocating said saddles in said opposite directions with respect to each other, frame members carried by said saddles and reciprocable therewith, slicing members carried by said frame members, means providing hinged connection between said frame members, to permit said frame members to have horizontal self-adjustment relative to each other to adjust themselves in position upon said saddles, said last-named means comprising arms arranged in pairs and pivotally connected together by vertically extending lugs fixed to the housing at each side of the saddles, posts extending upwardly from the other ends of the said arms, and bearing sleeves carried by the frames and slidable on the posts to provide a reciprocable connection between said posts and said frames.

2,437,123

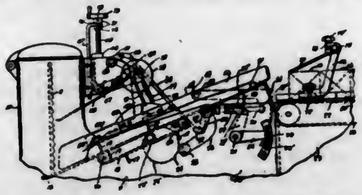
BLADE MOUNTING MEANS FOR MULTIPLE BLADE BREAD SLICING MACHINES

Charles H. Petskeyes, Davenport, Iowa, assignor to Gellman Manufacturing Company, Rock Island, Ill., a corporation of Illinois

Application June 9, 1945, Serial No. 598,458
1 Claim. (Cl. 146—153)

Means for connecting corresponding upper end portions of a plurality of spaced knives to the upper rail of the frame of a slicing machine comprising a mounting bar fixed to the upper rail and having an inclined upwardly extending portion provided with a plurality of open slots spaced equally apart with respect to each other, a plurality of levers removably fulcrumed on said bar in said slots, and having corresponding end portions bifurcated and opposite end portions each provided with a notch adapted to removably receive the hanger pin carried by a slicing knife, spaced mounting studs carried by the mounting plate and projecting through the bifurcated portions of the levers to stabilize said levers, and spring means carried by the mounting studs and engageable with adjacent portions of said levers to pivot said levers upon said bar in a direction opposite to the pivotal movement of said levers by action of the slicing knives.

2,437,124



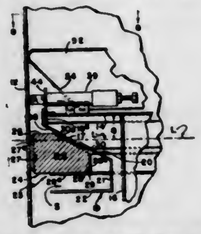
FEEDING DEVICE FOR MULTIPLE BLADE BREAD SLICING MACHINES

Charles H. Petskeyes, Davenport, Iowa, assignor to Gellman Manufacturing Company, Rock Island, Ill., a corporation of Illinois

Application June 9, 1945, Serial No. 598,460
1 Claim. (Cl. 146—158)

The combination with a bread slicing machine having a plurality of reciprocating slicing knives and an inclined chute upon which loaves of bread to be sliced are adapted to be moved toward the slicing knives, means providing a guideway for movement of said loaves of broad down the chute, and means for conveying loaves of bread to be sliced to the upper end portion of said chute, of means for successively transferring said loaves of bread from said conveying means to the upper end of the chute comprising a tiltable plate, means for intermittently tilting said plate, and

anti-tilting means including a single blocking plate located adjacent the upper end of the chute and above the same, and in the path of the loaves of bread transferred to said upper end of the chute by said transfer means, means for moving the blocking plate substantially in the plane of said plate into and out of the path of the loaves



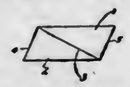
of bread, and means providing an operative connection between said blocking plate moving means and said plate tilting means whereby the anti-tilting means will be moved from the path of movement of the loaves of bread when the plate is moved to a position to receive a loaf of bread from the conveying means.

2,437,125

FLOATING ROOF FOR TANKS

Fred L. Plummer, Warren, Pa., assignor to Hammond Iron Works, Warren, Pa., a corporation of Pennsylvania

Application September 9, 1944, Serial No. 553,348
2 Claims. (Cl. 220—26)



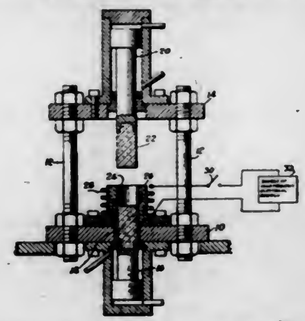
1. A circular storage tank for holding a body of liquid, provided with a pontoon-supported roof structure adapted to float on the liquid in the tank at substantially the liquid-level in the tank and vertically movable as that liquid-level fluctuates, an inverted conical skirt portion fixed to the roof and lying between the pontoons of the roof and the tank wall while extending from above the tank's liquid-level to below that level, spring pressed means for centering the roof in the tank, a freely floating sectionalized ring unconnected to either tank or roof and greater in width than the distance between the roof top and the tank wall so that the roof and ring are in overlapping relationship with the top of the ring being below the top of the roof whereby the ring has the sole function of sealing the space between tank wall and roof when there is liquid in the tank; said ring comprising buoyant sector blocks adapted to engage one another endwise to provide for substantially horizontal compensatory play therebetween, each block having an inner face complementary to the outer conical face of the skirt portion and having an outer face complementary to the wall of the tank, a representative specimen of said block being of a highly buoyant glass material deriving its buoyancy from innumerable shut-in minute air-bubbles constituting a rigidified foamlike mass which is non-absorbent, non-corroding, non-punctureable, chemically inert, and non-sinkable, as well as impervious to liquid and gas, such block being urged upwardly by vertical buoyant force of such magnitude as to insure lateral force components to exert a desired degree of self-sufficient sealing pressure with respect to said skirt portion and the tank wall respectively, and wearing strips on the blocks to engage slidably the respective complementary faces of the skirt and the tank wall.

2,437,126

CEMENTED OPTICAL ELEMENT HAVING LIGHT ABSORBING COATING

Joseph D. Reardon and Gustav E. Guellich, Buffalo, N. Y., assignors, by mesne assignments, to American Optical Company, Southbridge, Mass., a voluntary association

Application March 15, 1944, Serial No. 526,640
2 Claims. (Cl. 88—1)



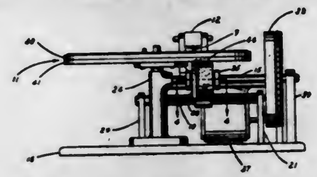
1. A cemented optical light refracting element comprising a plurality of independent component parts made of glass and having accurately formed light transmitting walls, certain of said walls being arranged in adjacent mating relationship and secured together by a transparent water-resistant cement formed of Canada balsam, other of said walls serving as light entrance and exit surfaces arranged so as to allow light rays to be transmitted along a predetermined path through said element, other external wall portions connecting said two surfaces, and a dull black opaque light absorbing coating upon said last-mentioned external wall portions of said cemented optical elements and the exposed edge portions of said cement, said coating comprising 5 to 15 per cent of lamp black in a vehicle of dewaxed shellac, said coating having been deposited from a solution containing aqueous ammonium hydroxide and no other solvent.

2,437,127

APPARATUS FOR POWDER METALLURGY

Lloyd D. Richardson, Dayton, Ohio, assignor to H-P-M Development Corporation, Wilmington, Del., a corporation of Delaware

Application October 1, 1945, Serial No. 619,654
3 Claims. (Cl. 219—3)



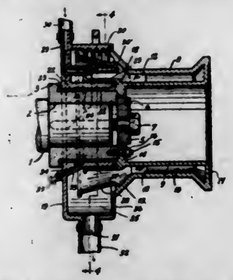
1. In an apparatus for forming workpieces from powdered metals; a substantially horizontal bed; a die of substantially electrically non-conductive material supported on said bed; an opposed pair of pressing members reciprocable in the cavity of said die and comprising at least end portions which are substantially electrically non-conductive; and an induction coil encircling the cavity of said die and adapted for being energized by a source of high frequency electrical energy; means for supporting one of said pressing members in spaced relation from said bed comprising strain rods, said bed having means for supporting said other pressing member, and means for reciprocating said pressing members comprising cylinders and pistons mounted on said strain rods and bed respectively.

2,437,128

VARIABLE-SPEED TRANSMISSION

William K. Rieber, Los Angeles, Calif.

Application May 28, 1945, Serial No. 596,393
7 Claims. (Cl. 74—194)



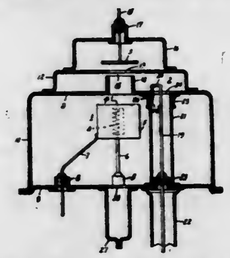
1. In phonographic apparatus of the class described and employing a record bearing turntable frictionally driven by the periphery of a drive wheel mounted in adjustable relationship to the said turntable, a magnetic means for maintaining frictional engagement pressure between said turntable and drive wheel, which means consists of the combination of: a turntable constructed of ferro-magnetic material; a drive wheel magnetized with one magnetic pole at the engaged periphery thereof; a non-rotating, ferro-magnetic pole piece mounted in fixed relationship with the axis of the drive wheel, but in adjustable relationship with the turntable, so that it moves with said drive wheel and forms a magnetic flux conducting path, which serves to lead a substantial portion of the flux to an area adjacent to the point of frictional engagement between the drive wheel and turntable.

2,437,129

ROTARY CATHEAD

John H. Schreiber, St. Louis, Mo.

Application January 22, 1945, Serial No. 573,953
1 Claim. (Cl. 254—150)



In a device of the class described, an adapter sleeve for a rotary shaft provided with an outer radial flange, a retainer member comprising an annular plate having a series of radial arms releasably attached to the end of said rotary shaft and said arms positioned to abut against the inner ends of said adapter sleeve, a stationary hub in which said adapter sleeve is mounted, a bearing member between said hub and said adapter sleeve and held against displacement by said outer radial flange on the adapter sleeve, a spool provided with an inner tubular extension fitted over said hub and having an internal flange abutting against the inner end of the adapter sleeve, and releasable means for connecting said spool with said adapter extending through said internal flange and into the adapter sleeve.

2,437,130

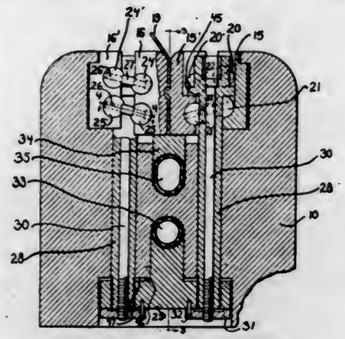
ULTRA HIGH FREQUENCY ELECTRIC DISCHARGE DEVICE

William J. Scott and Christopher J. Milner, Rugby, England, assignors to General Electric Company, a corporation of New York

Application October 6, 1944, Serial No. 557,451
In Great Britain July 3, 1942
Section 1, Public Law 690, August 8, 1946
Patent expires July 5, 1963
3 Claims. (Cl. 250—27.5)

1. An electron discharge device of the velocity modulation type having a cavity resonator integral therewith and a header terminating one end of said device, said resonator including a wall having an opening therein, a concentric output transmission line extending through said header and coupled to said resonator through said opening, said line having an outer conductor extending into proximity with said opening and a centrally disposed inner conductor, said inner conductor extending into said resonator and having one end secured to said outer conductor whereby assembly of said device is facilitated, and means for preventing leakage of electro-magnetic fields between said outer conductor and said resonator comprising an annular flange surrounding said outer conductor and said opening in closely fitting relationship to said outer conductor and said wall.

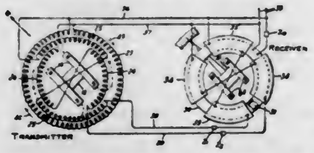
2,437,131



FLUID OPERABLE SHORT STROKE DEVICE

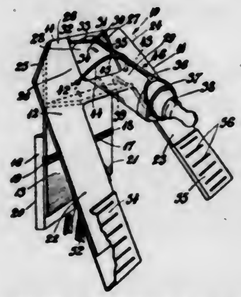
Victor S. Shaw, Mount Gilead, Ohio, assignor to H-P-M Development Corporation, a corporation of Delaware

Application February 20, 1943, Serial No. 476,653
11 Claims. (Cl. 24—249)



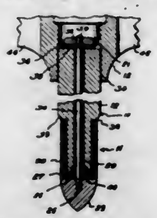
1. In a force-exerting device a bed having a wall, said wall having a first channel opening into one face of said wall, a second parallel channel opening into the opposite face of said wall, two plunger means each fitting a respective channel and forming chambers with the respective channels, a dilatable element in each chamber, pressure elements mounted on said bed for guided movement toward and from each other in intersecting paths away from said first channel, and positioned to be so moved in one direction

along their paths by the plunger in said first channel, whereby to press a work piece between said elements, and means on said bed, connected



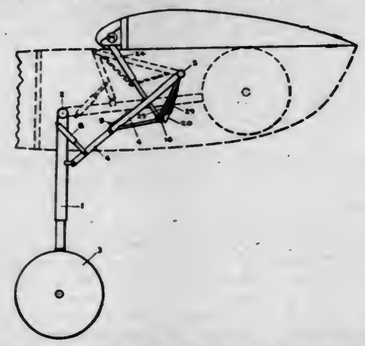
to be operated by said second plunger to engage and move said elements in the opposite direction along their paths as said element in said second channel is dilated.

2,437,132
REMOTE INDICATING COMPASS
Allen T. Sinks, Beach Bluff, Mass., assignor to General Electric Company, a corporation of New York
Application November 17, 1943, Serial No. 510,614
4 Claims. (Cl. 177—351)



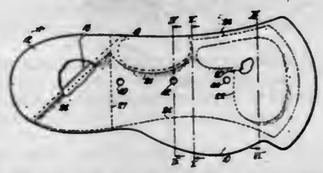
3. A telemetering system comprising a transmitter unit and a receiver unit, each unit comprising a stator member and a rotor member, each stator member comprising a ring core of saturable magnetic material carrying winding means thereon provided with polyphase second-harmonic connections and single phase excitation connections and each rotor member comprising a rotatable, poled permanent magnet, circuit means for connecting the single phase connections of the transmitter and receiver stator winding means to a common source of periodically varying current, circuit means interconnecting the polyphase connections of the transmitter and receiver stator winding means to permit flow of induced, second-harmonic currents between the transmitter and receiver units, a first phase-shifting impedance means electrically connected in the excitation circuit of one of said units to shift the relative phase angle of the transmitter and receiver excitation currents, and a second impedance means electrically connected in the circuit including said polyphase connections to shift phase angle of second harmonic currents flowing between transmitter and receiver units, said first and second impedance means being dimensioned so that the resulting phase shift causes the maximum and minimum values of the transmitter generated second-harmonic currents flowing in the receiver approximately to correspond in time phase with the minimum and maximum values of permeability in receiver core permeability variation cycle and the maximum and minimum values of receiver generated second-harmonic currents flowing the transmitter to be displaced approximately 90 electrical degrees in time phase from the maximum and minimum values of permeability in the transmitter core permeability variation cycle whereby rotation of the transmitter magnet is effective in producing in the receiver a torque tending to rotate the receiver magnet in angular correspondence with the transmitter magnet but rotation of the receiver magnet produces no feedback torque in the transmitter tending to rotate the transmitter magnet.

2,437,133
BABY FEEDER
Walter M. Sirks, Columbus, Ohio
Application November 1, 1945, Serial No. 626,079
6 Claims. (Cl. 248—105)



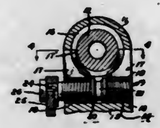
6. A baby feeder comprising an easel having a pocket formed in its upper end, means for holding a bottle seated therein, said means consisting of a harness attached to the easel and fitted upon the bottle in a manner to give the bottle universal movement, means for adjusting the angular position of the easel, means for adjustment of the height of the bottle, and said harness being elastic.

2,437,134
ELECTRODE ASSEMBLY FOR MOISTURE METERS
August L. Smith, Harrison, N. Y.
Application December 8, 1943, Serial No. 513,451
1 Claim. (Cl. 175—183)



An electrode assembly for use in measuring soil moisture which comprises a tubular composite shaft, a pointed metal electrode mounted at the lower end of said shaft, a metal tube extending substantially the length of said shaft insulated from said electrode and having a constricted portion just above said electrode, an insulating sleeve mounted outside said constricted portion having a diameter corresponding to the diameter of said electrode and a surface merging at its lower end into the surface of said electrode, a metal section forming part of said tube just above said insulating sleeve, having a diameter larger than that of said sleeve and said pointed electrode and having a surface which at its lower end tapers and merges into the surface of said sleeve, said tapered portion of said tube serving as a second electrode.

2,437,135
AIRPLANE LANDING GEAR AND EMERGENCY RELEASE MECHANISM THEREFOR
Gordon R. Steinhoff, Santa Monica, Calif., and James W. Blair, Tulsa, Okla., assignors to Boeing Airplane Company, Wichita, Kans., a corporation of Delaware
Application November 5, 1943, Serial No. 509,050
18 Claims. (Cl. 244—102)

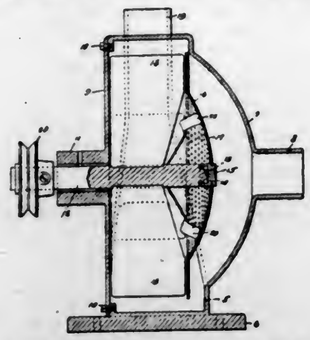


1. In a retractable landing gear, a landing gear member movable between retracted and landing positions, retracting means, means normally connecting said retracting means to said member to move it positively in both directions between retracted and landing positions, and releasable at will to disconnect said retracting means from said member for movement from retracted position into landing position independently of said retracting means, a reaction member and spring means engaged with and reacting between said reaction member and said landing gear member, stressed by initial downward movement thereof toward landing position after it is disconnected from said retracting means, and operable by relief of stress therein by reactive displacement of said spring during the terminal portion of the movement of said member toward landing position to assist completion of such movement.

2,437,136
FOOT LEVELER
Clarence H. Stemmons, Kansas City, Mo.
Application April 30, 1945, Serial No. 591,203
2 Claims. (Cl. 36—71)

1. An appliance of the character described comprising a number of pieces of superimposed sheet material formed to fit in a shoe beneath the foot of the wearer; and a heel pad, a cuboid pad and a metatarsal pillow, all formed from flexible material and all disposed between certain of the said pieces of sheet material, said heel pad being relatively thick at its outer edges and terminating at a thin edge extending diagonally across the appliance, said cuboid pad having a convex upper surface and extending from the heel pad adjacent one end of said thin edge thereof, said pillow being L-shaped and having one leg thereof beneath the second, third and fourth metatarsal heads, and the other leg thereof beneath the fourth metatarsal bone of the foot of the wearer, the free end of said other leg of the pillow extending from the cuboid pad in opposed relation to said heel pad.

2,437,137
GUN-BARREL LOCK
Carl G. Swebilius, Hamden, Conn.
Application August 31, 1945, Serial No. 613,868
1 Claim. (Cl. 42—75)

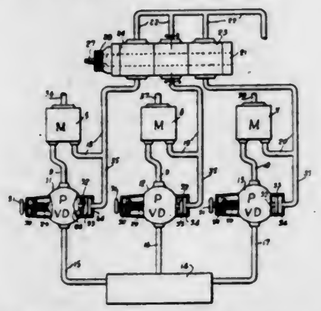


In a firearm, the combination of a receiver having an opening extending longitudinally of the same and a bore at right angles thereto, a barrel slidably received within said receiver opening and having within said opening a circumscribing groove, slots extending from the ends of said bore into said receiver opening, screw means rotatably mounted in said bore, clamp jaws slidable in said slots and threaded on said screw means whereby rotation of the same will move said jaws in opposite directions in said slots relative to said barrel circumscribing groove, said jaws having curved locking portions eccentric to the receiver opening axis whereby said portions engage said groove in the barrel to lock the same, means in said receiver and intermediate the ends of said screw means rotatably holding the same against movement axially of said bore, crank means secured to said screw means for rotating the same, and means releasably locking said crank means against rotation relative to said receiver.

2,437,138
PNEUMATIC GRAIN LOADER
Frank H. Theis, Hutchinson, Kans.
Application December 10, 1945, Serial No. 633,942
4 Claims. (Cl. 302—37)

1. A pneumatic grain loader comprising a drum-like housing having an inlet opening formed centrally thereof and having a tangentially formed outlet opening, a horizontal shaft extending into the housing, fan blades mounted on the shaft and adapted to create a suction through the housing, a screening member of a diameter to extend beyond the outer ends of the fan blades mounted on the forward end of the shaft, blades on the screening member against which air strikes on entering the housing, rotating the screening member independently of the shaft, said screening member separating the fan from the front wall and intake opening of the housing and adapted to obstruct the passage of

solids passing into the housing with air, whereby the solids fall to the bottom of the housing and



are directed through the outlet opening by the blast of air produced by the fan.

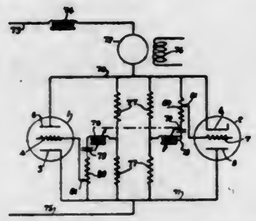
2,437,139

HYDRAULIC SPEED CONTROL APPARATUS

Warren R. Tucker, Dayton, Ohio, assignor to H-P-M Development Corporation, Wilmington, Del., a corporation of Delaware

Application February 23, 1944, Serial No. 523,505
9 Claims. (Cl. 60—97)

9. In a system for selecting and controlling the speeds of a plurality of fluid operable motors; a fluid pressure responsive control means associated with each of said motors; a flow responsive means serially connected with each of said motors and operable to create a pressure difference between its inlet and its outlet in proportion to the rate of fluid flow therethrough; means conveying the pressure difference generated by each of said flow responsive means to the control means associated with the same motor; means for adjusting each of said control means independently of the others and means selectively operable for adjusting all of said flow responsive means simultaneously and equally.



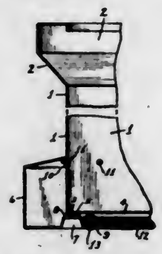
2,437,140

ELECTRONIC MOTOR CONTROL CIRCUITS

George A. Waldie, Edison, Ohio, assignor to H-P-M Development Corporation, a corporation of Delaware

Application October 20, 1943, Serial No. 506,983
1 Claim. (Cl. 318—257)

In combination in an electrical control circuit for varying the rate and direction of rotation of a direct current motor, a field winding, a direct current source for exciting said field winding, and an armature associated with said field winding, the combination of a first and second triode each having a cathode, an anode, and a grid, an alternating current supply including first and second leads, means connecting one side of said armature to said first lead and the other side of said armature to the anode of said first triode and the cathode of said second triode, means connecting said second lead to the cathode of said first triode and the anode of said second triode, two pairs of serially connected fixed resistors connected in parallel across said leads, a first variable resistor



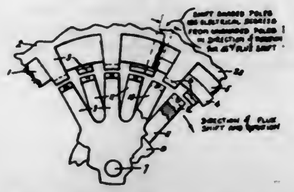
having one end connected to said first lead and its other end connected through a condenser and a first variable reactor to an intermediate point between the resistors of one pair of said fixed resistors, an adjustable tap on said first variable resistor connected to the grid of said second triode, a second variable resistor having one end connected to said second lead and its other end connected through a condenser and a second variable reactor to an intermediate point between the resistors of the other pair of fixed resistors, an adjustable tap on said second variable resistor connected to the grid of said first triode, and means for simultaneously differentially actuating said variable reactors.

2,437,141

CASKET CONSTRUCTION

Walter E. Wallace, Richmond, Ind., assignor to Bell and Wallace Manufacturing Corporation, Richmond, Ind., a corporation of Indiana

Application January 5, 1945, Serial No. 571,709
3 Claims. (Cl. 27—2)



2. In a casket construction with side and end members having their lower edges interlocked with the outer peripherial edges of the bottom member, a moulding assembly removably secured through the lower portions of the side and end members, a channel formed continuously in the under side of the moulding assembly and adapted to support the interlocked lower edges of the side and end members.

2,437,142

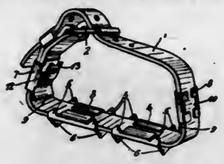
SHADED-POLE SYNCHRONOUS MOTOR

Alfred F. Welch, Fort Wayne, Ind., and John R. Enochs, Framingham, Mass., assignors to General Electric Company, a corporation of New York

Application June 11, 1946, Serial No. 675,864
11 Claims. (Cl. 172—275)

1. An alternating current synchronous motor comprising cooperating stator and rotor members, the stator having a magnetic core structure presenting a plurality of spaced salient pole pieces to the rotor and alternating current exciting winding means for producing alternating fluxes of alternating polarity in said pole pieces, and means for causing the flux in half of the pole pieces to differ in time phase with respect to the flux in the remaining stator pole pieces in an amount between 35 to 45 degrees, the pole pieces in which the flux is thus shifted having positions equivalent to between 120 and 150 electrical degrees displacement from the remaining pole pieces of the same polarity measured in the direction of flux shift, the rotor comprising a magnetic structure presenting salient poles to the stator salient poles even in number and spaced according to the stator pole piece spacing, and having permanent magnet means for polarizing the rotor pole pieces at alternate polarity.

7. A rotor structure for synchronous motors comprising a cylindrical permanent magnet having its axis coincident with the axis of rotation of the rotor and polarized along said axis, a pair of magnetic disk members extending radially from each end of said magnet, said disk members having radial slits therein so as to divide their peripheries into polar salient sections, the polar salient sections of one disk from each end of the magnet being bent into a circular formation of evenly spaced pole pieces of opposite magnetic polarity at one end of the rotor and the polar salient sections of the remaining disk from each end of the rotor being bent into another circular formation of evenly spaced pole pieces of opposite magnetic polarity at the other end of the rotor, the sections of opposite magnetic polarity which are thus required to pass each other in arriving at such formation interleaving with each other with sufficient clearance as to avoid any substantial shunting of the permanent magnet.



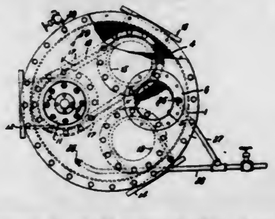
2,437,143

NONSKID DEVICE FOR SHOES

Bror With, Skoyen, near Oslo, Norway

Application April 5, 1946, Serial No. 659,903
2 Claims. (Cl. 36—62)

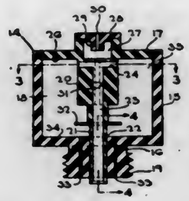
1. An improved nonskid device for shoes, comprising a strap adapted to be tightened around a shoe, sliding nonskid members on the said strap and provided with prongs, adapted to engage the underside of the sole of the shoe, and other prongs adapted to act against the ground, a pair of slides on the said strap being formed as gripping jaws and adapted to engage with the upper edge of the sole of the shoe and to act as lever arms for tightening the said strap, and means for adjustably locking the last mentioned gripping jaw slides to the said strap, said means consisting in a pressing member, adapted to engage the said strap at any point desired and being formed as an angularly shaped member pivoted in the said



slide with a short arm on the inside of the said slide and a longer arm extending out of the said slide through a transverse slot in the same, said slide opposite to said slot being provided with an aperture, adapted to allow the said strap to bulge out when the said pressing member is operated.

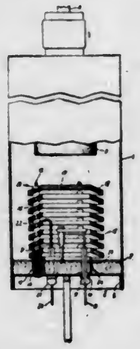
2,437,144

FLUID COOLED FOUR-WAY VALVE



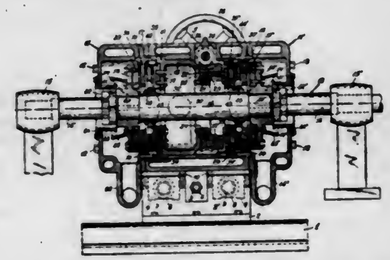
Frank M. Wolf, Madison, Wis., assignor to Wisconsin Alumni Research Foundation, Madison, Wis., a corporation of Wisconsin

Application August 21, 1944, Serial No. 550,468
1 Claim. (Cl. 251—87)



The reversing valve mechanism comprising, in combination, a pressure chamber, defined by a housing provided with an inlet port, and a cooperating substantially horizontal plane surfaced valve seat member provided with three ports opening from below, one of said valve seat ports being an exhaust port equidistant from the other two valve seat ports; within said chamber and spaced from said housing a substantially horizontally oscillatable valve member supported upon said valve seat and pivotally connected adjacent one end thereof to a part of said pressure chamber to provide in co-operation with said valve seat a passageway which is in permanent communication with said exhaust port and which is adapted to be in communication with either one of the two remaining valve seat ports; and means for oscillating said valve member about its pivot and in contact with said valve seat to bring said valve member into communication with first one and then the other of the two remaining valve seat ports and thereby to couple first one and then the other of the latter with said exhaust port, additionally characterized in that the under-surface of the valve seat member is webbed by projecting annular portions of said member about said ports and about the periphery of the member, in that there is attached to said projecting annular portions a plate member cooperating with said valve seat member and its projecting annular portions to define a closed space, and in that there are provided means for circulating a fluid coolant through said closed space.

2,437,145
NONSPILL VENT FOR STORAGE BATTERIES
Joseph Lester Woodbridge, Philadelphia, Pa., assignor to The Electric Storage Battery Company, a corporation of New Jersey
Application September 14, 1943, Serial No. 502,300
13 Claims. (Cl. 136—177)

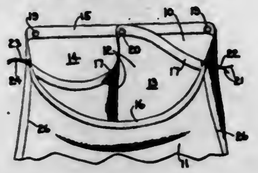


1. In a venting structure for a storage battery cell adapted to limit the escape of electrolyte when the cell is inverted by establishing a partial vacuum in the cell said structure including a vent passage from the cell terminating in and near the top of a chamber for trapping escaped electrolyte and a drain passage from the chamber into the cell, the combination of means for preventing the entrance of air into the cell when inverted comprising means for establishing a liquid seal by the escaped electrolyte at the exit terminus of the vent passage and the establishment of liquid surface tension in the drain passage.

2,437,146
ELECTRICAL DISCHARGE DEVICE EMPLOYING A POOL-TYPE CATHODE
Howard E. Zuvers, Scotia, N. Y., assignor to General Electric Company, a corporation of New York
Application November 20, 1946, Serial No. 711,144
6 Claims. (Cl. 250—27.5)

1. An electric discharge device including an envelope, a pool-type cathode retained within said envelope, an anode supported within said envelope in insulated relation with respect to said cathode, means for forming a cathode spot on the surface of said cathode, and a baffle structure surrounding said last-mentioned means and comprising a plurality of generally annular members each having a frusto-conical surface, said members being supported in a stack in such mutually spaced relation that the projections of said members on a plane extending longitudinally of the stack are overlapping and a member presenting a substantially continuous transverse surface supported between said stack and said anode.

2,437,147
COLLOIDAL MILLS OF THE MULTIPLE GRINDING UNIT TYPE
Ellsworth B. A. Zwoyer, Perth Amboy, N. J., assignor to Fuel Research Corporation, New York, N. Y., a corporation of Delaware
Application May 12, 1944, Serial No. 535,237
8 Claims. (Cl. 241—146)

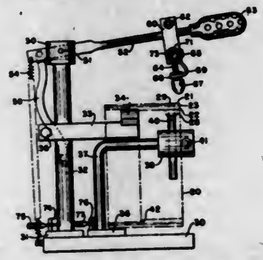


1. A colloidal disc grinding mill for material fed thereto under pressure comprising a shell, a rotatable shaft extending through said shell, means supporting said shell to enable movement thereof in the direction of the central axis of said shaft, a pair of spaced groups of cooperating grinding elements contained in said shell, the grinding elements of each group including a rotor mounted on said shaft and a stator supported by said shell, means intermediate said groups for feeding the material under pressure to both of said groups, the grinding elements in said groups being constructed and arranged with relation to said shaft and shell to shift the latter relative to each other when the pressures between the elements of each group become unbalanced to a relative position where such pressures will be balanced between the elements of both groups.

2,437,148
PREPARATION OF FLUORINE HYDROCARBON COMPOUNDS
Arthur Livingston Barney, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application January 11, 1944, Serial No. 517,837
4 Claims. (Cl. 260—653)

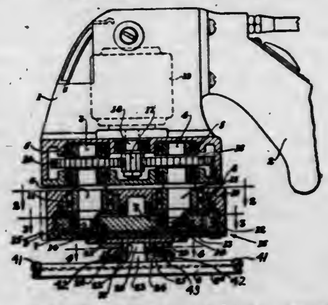
1. A process for synthesizing a vinyl fluoride which comprises subjecting in the vapor phase and at temperatures ranging from 20° C. to 150° C., an acetylenic hydrocarbon in admixture with hydrogen fluoride to contact with a catalytic composition consisting of mercury oxide at least partially combined chemically with an oxide of nitrogen supported on a water-insoluble alkaline earth metal salt as a carrier, which salt is substantially unreactive with said hydrogen fluoride and with said mercury compound and is selected from the group consisting of a fluoride, sulfate and phosphate, said catalytic composition having been obtained by roasting a mixture of a thermally-decomposable mercury compound with said alkaline earth metal salt, at temperatures from about 95° C.–400° C. and until the moisture content of the reaction mass is below about 2%.

2,437,149
COMPARTMENTED LAUNDRY BAG PROVIDED WITH IDENTIFYING LEGENDS
Howard F. Baxter, Grand Rapids, Mich.
Application September 28, 1945, Serial No. 619,137
2 Claims. (Cl. 150—1)



1. A laundry bag having a rear fabric panel, a front fabric panel and an intermediate panel all secured together at their bottom and side edges to form a pair of spaced compartments each having an open top, centrally located means along the top edge of the rear panel for supporting the rear panel, outwardly spaced means along the upper edge of the rear panel located a substantial distance from the side edges of the rear panel for supporting the rear panel, means offset lengthwise of the center of the intermediate panel for hanging the intermediate panel offset from the central means for hanging the rear panel and adapted to be supported therewith.

2,437,150
COMPRESSED CEREAL
Isadore A. Berg, Cincinnati, Ohio
No Drawing. Application September 16, 1944, Serial No. 554,543
8 Claims. (Cl. 99—83)



1. A method of producing a unitary self-sustaining compressed cereal food which is both sufficiently firm to withstand handling and packing and sufficiently friable to be crumbled in preparation for use, the said method comprising adding to said cereal composition prior to compression thereof a small quantity of a material selected from the group consisting of glycerine, and propylene glycol as a binder to hold the particles of cereal together following compression, and then compressing said mass.

2,437,151
ELECTRIC SOLDERING APPARATUS
Henry J. Braner, Dayton, Ohio, assignor to The National Cash Register Company, Dayton, Ohio, a corporation of Maryland
Application June 14, 1945, Serial No. 599,457
1 Claim. (Cl. 219—12)

In an apparatus for supporting electrically conductive work to be soldered, the combination of a base constructed of electrically non-conducting material; a first electrically conductive member supported on said base, said member having one terminal of a source of electrical energy connected thereto; an electrically conductive head on said member; an electrically conductive rod to support said work and movably mounted in said head to accommodate work of varying size and character; means for clamping the rod in any selected position; a second electrically conductive member mounted on said base, said second member having a terminal of a source of electrical energy connected thereto; an electrically conductive pivoted means supported on said second member; a flexible conductor connected between the second member and one end of the pivoted means; an electrical conductive bracket adjustably mounted adjacent the free end of the pivoted member; an electrode carried by the bracket; means to clamp the bracket to the pivoted means in any selected position corresponding to the position in which to normally maintain the pivoted means in a posi- said rod is positioned in said head; resilient means tion in which the electrode is disengaged from the work thereby holding the electrical circuit through said electrically conducting elements open; an electrically non-conducting support for the work adjustably mounted on said first member to accommodate work of varying sizes and character; and a handle on the free end of the pivoted means to enable the operator to lower the electrode into contact with the work on the rod to thereby close said circuit through the work and cause the work to be heated to a soldering temperature.

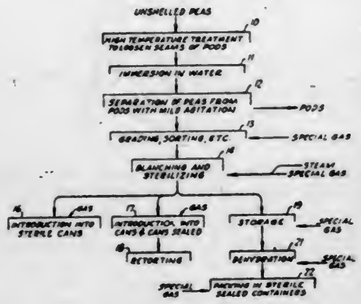
2,437,152
SANDING OR RUBBING MACHINE
Arthur C. Burleigh, Wellesley, Mass.
Application May 2, 1945, Serial No. 591,457
4 Claims. (Cl. 51—170)

1. A portable sanding machine comprising a supporting head, a pair of drive shafts mounted therein, each drive shaft having two crank portions situated 180° apart, a pad-carrying element mounted on one crank portion of each drive shaft, a sanding pad element secured to the pad-carrying element, a counterweight mounted on the other two crank portions of said drive shafts, and means to rotate said shafts, whereby both the pad-carrying element and the counterweight are given gyratory motions which are 180° out of phase with each other.

2,437,153
ELECTRIC FUSE LIGHTER
Alvin M. Cohan, Tamaqua, Pa., assignor to Atlas Powder Company, Wilmington, Del., a corporation of Delaware
Application May 13, 1943, Serial No. 486,895
8 Claims. (Cl. 102—28)

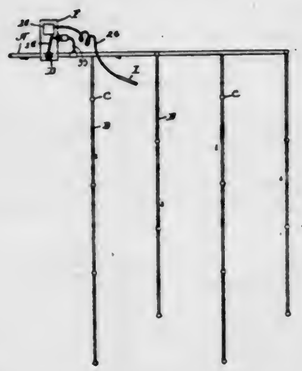
7. An igniting unit for safety fuse intended to be discarded after use and comprising a paper

tube, an electric match and a body of sealing material sealing said match rigidly within said tube, said match comprising a head of deflagrating material adapted when ignited to deliver a burst of very hot flame, one end portion of said tube being dimensioned to snugly embrace the end portion of a fuse to be spitted, said match head being located far enough away from said end portion of



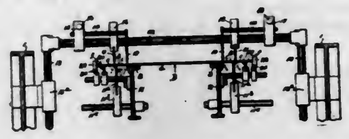
the tube to permit the end portion of the fuse to enter the tube and be supported by the tube along a portion of the length of the fuse, said match further comprising a pair of spaced metallic contact strips and an interposed body of insulating material all clipped rigidly together to form a stiff structure projecting beyond that end of the tube remote from the fuse receiving end.

2,437,154
VERTICALLY PIVOTED AUTOMOBILE SIDE-WINDOW LAMINATED MIRROR
Luke M. Dohanian, Somerville, Mass.
Application September 21, 1946, Serial No. 698,507
1 Claim. (Cl. 88—93)



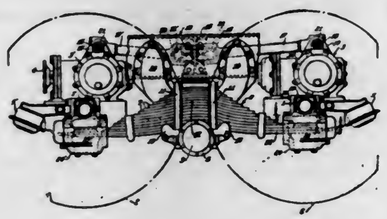
A vertically pivoted, automobile side-window structure which at least at the vertical free-edge rear portion of the window consists of two thicknesses of glass face-to-face and having a reflecting, relatively narrow coating applied to both of the meeting glass surfaces, but only at and throughout the said free, vertical, rear-edge portion of the said window, thereby leaving all the remainder of the window area devoid of such coating, one of said thicknesses of glass being of the full area of the said window and the other thickness of glass being of the full height of the first thickness of glass and of at least a width to provide, with said relatively narrow coating, a mirror of the full height of the said window but only of a width to provide a reflecting surface at a substantial portion of the window area along said rear-edge portion thereof by which, when the window is turned with its free rear edge outward, traffic approaching from the rear at the side of the automobile at which said window is located, can be observed, the said window construction providing a mirror at both the inner and the outer surfaces of the said window, but only at the said rear edge portion thereof, throughout the entire height of said window, whereby, when the said window is closed upon its said vertical pivot and the automobile is stationary, a person standing at the outside of the automobile may use the said mirror for self-inspection, and whereby, when the automobile is occupied and in motion and the said window is swung upon its said vertical pivot, so that its said free rear edge projects outward, the person seated next said window so swung upon its vertical pivot may accurately observe by said mirror a car approaching from the rear at that side of the automobile.

2,437,155
PROCESS FOR THE TREATMENT OF GREEN PEAS
Melville E. Dunkley, Modesto, Calif.
Application February 5, 1944, Serial No. 521,209
1 Claim. (Cl. 146—229)



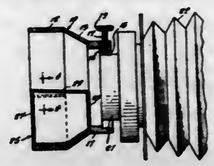
In a process for the treatment of green peas, the steps of momentarily subjecting the unshelled pea pods to a relatively high temperature of the order of 2000° F., for a relatively short period of time such as a period of the order of from two to four seconds, thereafter chilling the pods by contact with gater, gently agitating the pods while immersed in the water to remove the peas from the pods, and then removing peas from the pods by screening.

2,437,156
METHOD AND APPARATUS FOR COOLING BY EVAPORATION
Albion N. Frick, Los Angeles, Calif., assignor to Frederick G. Bradbury, Los Angeles, Calif.
Application July 11, 1942, Serial No. 450,625
3 Claims. (Cl. 62—6)



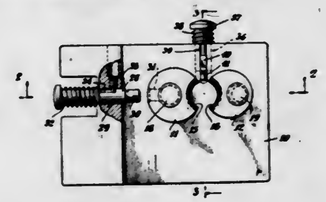
1. The method of cooling a surface by evaporation of a spray of cooling liquid which consists of spraying a thermostatically controlled flow of liquid upon such surface until the temperature influencing the thermostat drops a predetermined amount lower than the opening point, and of successively checking and releasing the spray of liquid in the meantime to cause successive flashes of evaporation of the liquid sprayed upon the surface independently of said thermostatic control

2,437,157
MACHINE FOR SETTING UP BOX BLANKS
Horace W. Gregoire, Boston, Mass., assignor to Oskar W. Wikstrom, Newton, Mass.
Original application June 5, 1942, Serial No. 445,887. Divided and this application November 2, 1944, Serial No. 561,577
5 Claims. (Cl. 93—49)



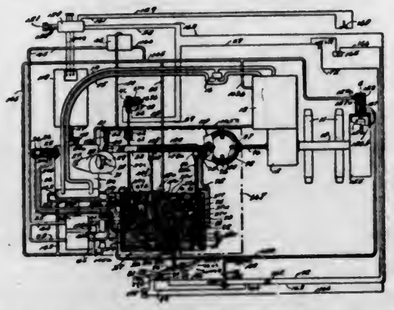
1. In a paper-box machine for setting up blanks having at one or more walls a plurality of flaps with aligned or parallel fold lines and of which flaps one at least partly encloses another, means to convey the blanks in a given path along the machine, a blank breaking or flexing station disposed in said path, said conveying means presenting the blanks successively in temporarily halted position at said station, and a vertically reciprocable breaker assembly at said breaking station, said assembly including breaker means adapted to flex one of the plurality of enclosingly related flaps supporting means at one side of the breaker means to hold in the plane of the blank the flap next inwardly adjacent the flap to be flexed, and means at the other side of the breaker means for simultaneously there retaining in the plane of the blank a flap of the enclosingly related plurality thereof so as to separate said last mentioned flaps along their non-folding edge portions.

2,437,158
YIELDABLE BOGIE SPRING MOUNTING
John W. Heiney, Allentown, Pa., assignor to Mack Manufacturing Corporation, New York, N. Y., a corporation of Delaware
Application February 7, 1944, Serial No. 521,320
9 Claims. (Cl. 267—30)



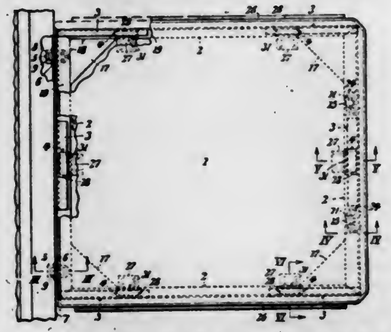
1. A spring cushioning unit including a spring leaf, a hollow casing having an open portion receiving an end portion of said spring leaf, resilient cushioning means including oppositely spaced resilient block members mounted in said casing and receiving said end portion therebetween and connected to said casing, one of said block members being secured to said end portion, stop means within said casing located exteriorly of said block members, and stop means pivotally secured to said end portion and located exteriorly of said first-mentioned stop means, for limiting retraction of said leaf spring end portion from said casing.

2,437,159
COMBINED SUNSHADE AND REFLECTOR FOR CAMERAS
Edward J. Herbert, Scarsdale, N. Y.
Application August 8, 1945, Serial No. 609,538
1 Claim. (Cl. 95—18)



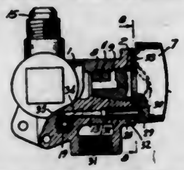
A combined sunshade and reflection producing device for attachment to the lens barrel of a camera or the like, and comprising a generally cylindrical housing provided with a rear section, a forward section of greater diameter and an intermediate tapered section, the inner surface of the rear section having a plurality of spaced, arcuate recesses, the rear section having threaded apertures terminating in such recesses, headed screws mounted within such apertures, and arcuate fingers rotatably mounted at the inner ends of such screws, whereby the housing may be secured to lens barrels of varying diameters, and a second member which is receivable in the forward section and provided with a mirrored upper wall disposed substantially midway between the upper and lower ends of the housing and being downwardly inclined towards the rear of such wall, such member being further provided with front and rear vertical walls and arcuate side walls, the side walls and the inner surface of the forward section of the housing being provided with cooperating splines and recesses receiving such splines.

2,437,160
PIVOTED JAW GAGE
Paul W. Johnson, Hartford, Conn.
Application June 15, 1943, Serial No. 490,835
18 Claims. (Cl. 33—174)



7. A gage comprising a frame, a gage member having gaging means which test a part at a plurality of points around the circumference thereof, a second gage member cooperating with the first gage member, means pivotally supporting the first gage member at a point spaced from the axis of gaging position and located so that this axis lies between the second gage member and the pivotal supporting means of the other gage member with the gaging means facing substantially radially outwardly from its pivotal supporting means and so that at least one gage member pivots away from the other to open the same for insertion of a part to be gaged and pivots in the other direction into gaging position upon a circular path radially spaced from the other gaging member, and means to arrest a pivoted gage member in gaging position.

2,437,161
HYDRAULIC HOIST SYSTEM
Garold A. Kane, Minneapolis, Minn., assignor to The Northern Pump Company, Minneapolis, Minn., a corporation of Minnesota
Application March 21, 1940, Serial No. 325,210
14 Claims. (Cl. 60—53)

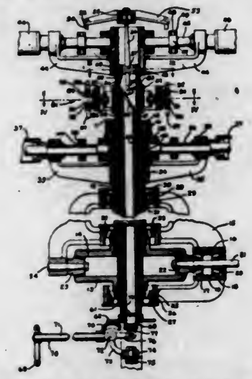


9. A hydraulic system for operating a hoist having in combination, a hydraulic power unit for moving said hoist, a variable stroke pump for driving said unit, means for changing the stroke of said pump for controlling the rate of movement of said hoist, a cam moved in accordance with the change in stroke of said pump for controlling the acceleration of said hoist and means driven in direct ratio with said unit and coacting with said cam after said hoist is in motion for controlling the deceleration of said hoist.

2,437,162
TABLE FOR VEHICLES
William M. Keller, Merion, Pa., assignor to The Pennsylvania Railroad Company, Philadelphia, Pa., a corporation of Pennsylvania
Application March 9, 1946, Serial No. 653,246
2 Claims. (Cl. 311—18)

1. A table for vehicles comprising a skeleton rectangular frame composed of angle bars having inwardly projecting flanges, and having means at one side for attachment to a wall of the vehicle, and means at the opposite side for supporting the frame in elevated position above the floor of the vehicle, a table top resiliently mounted within the open area defined by said angle bars and having brackets suspended from the table top and forming with the bottom surface thereof channels opening outwardly to accommodate said inwardly projecting flanges of the frame, and cushioning elements of sponge rubber or like material interposed between and secured to the flanges of the frame, the table top and the brackets therebeneath, said frame being otherwise wholly isolated from the table top.

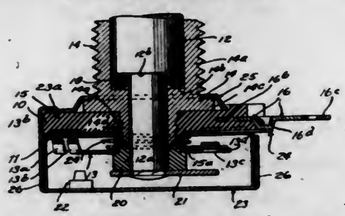
2,437,163
GAS VALVE SAFETY SHUTOFF
Ernst R. Koppel, Chicago, Ill., assignor to A. O. Smith Corporation, Milwaukee, Wis., a corporation of New York
Application June 2, 1945, Serial No. 597,263
4 Claims. (Cl. 158—117.1)



1. In a safety control for gas heaters having a main burner, a pilot burner, and a safety shut off valve operated thermostatically in response to a flame from said pilot burner to open position for supplying gas to the pilot burner and the main burner, the combination of a manually operable pilot valve to supply gas to the pilot burner when said safety shut off valve is closed, a main shut off valve having a handle to move the same between "closed," "start" and "open" positions to supply gas to said pilot valve when in start position, and a plunger connected by a cam to said handle at one end and extending into a groove in said pilot valve at the other end, said plunger being removed from said groove by said cam when the main shut valve is turned by said handle to "start" position to provide for operation of said pilot valve and disposed in said groove when the main shut off valve is turned by said handle to "closed" and to "open" positions to prevent operation of said pilot valve.

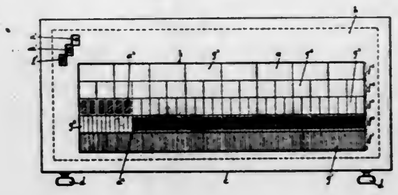
2,437,164
PROCESSING OF TITANIUM ORES
Edward N. Kramer, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application December 8, 1944, Serial No. 567,327
4 Claims. (Cl. 23—117)

4. A process for improving the grinding and air classification of beach sand Indian ilmenite preparatory to its acid attack to form soluble titanium compounds therefrom, which comprises mixing on the ilmenite basis about .02% to .2% of naphthenic acid with said ilmenite while the latter is being fed to a dry grinding mill equipped with an air separator, effecting the comminution and air separation of said ilmenite in the presence of said naphthenic acid consisting of naphthenic acids derived from petroleum oils, and thereafter reacting the comminuted naphthenic acid-containing ilmenite with sulfuric acid to convert said ilmenite to water-soluble titanium and iron sulfates.



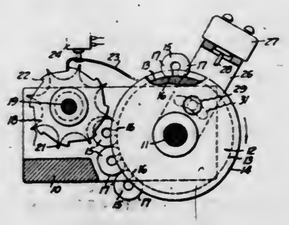
2,437,165
HELICOPTER LIFTING SCREW OPERATING MECHANISM
Arthur A. Locke, Detroit, Mich.
Application April 27, 1944, Serial No. 532,981
11 Claims. (Cl. 244—17)

1. In a helicopter, a hollow drive shaft, air screw blades supported and rotated by the drive shaft, said blades being movable to permit variation in angle of incidence, an arm adaptable for movement for changing the angle of incidence of each blade, means extending axially through the drive shaft and engageable with said arm, means operable by a pilot to impart axial movement to the means extending through the drive shaft, said means extending through the drive shaft being tiltable in part for simultaneously effecting a different angle of incidence of the



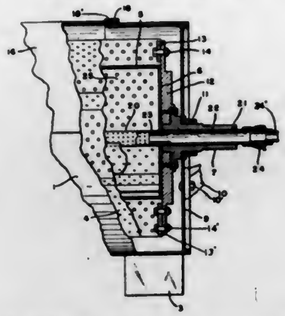
different blades, and means operable by a pilot comprising a member adaptable for vertically reciprocal and rotatable movement extending through said second named means for both positioning and actuating said tiltable portion in a directionally selected manner, each of said pilot operating means constituting a combined manual control and being actuable simultaneously or independently for effecting a uniform change in angle of incidence or a different change in angle of incidence of the different blades.

2,437,166
VOLUME CONTROL
Edmund G. Lodge, Rosemont, Pa., assignor to International Resistance Company, Philadelphia, Pa., a corporation of Delaware
Application June 2, 1944, Serial No. 538,389
8 Claims. (Cl. 201—55)



1. In the art of assembling a volume control part including a base of insulating plastic, a central bushing, terminals, and a resistance element comprising an insulating core coated with resistance material, the steps comprising completing the resistance element with the desired resistance characteristics and form to be used in the volume control when completed, relating the parts with terminals in electrical contact with spaced points on the element, and molding the plastic about the parts to provide a base with the completed element bonded to one side thereof and with portions of the terminals embedded in the base and in contact with said element.

2,437,167
MATCH DRAW INDICATOR
Arthur R. Lovelock, Boat of Garten, Scotland
Application February 21, 1946, Serial No. 649,265
In Great Britain March 7, 1945
12 Claims. (Cl. 116—131)

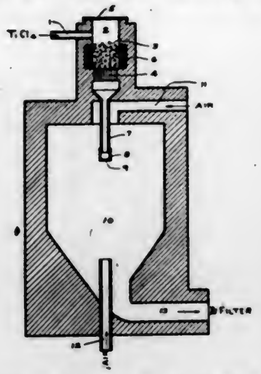


1. An appliance for computing and indicating match competitions for games comprising a web having stepwise rows of indicator marks thereon, the number of marks in each row being half the number of marks in the next row, means for winding and unwinding the web, a transparent sheet covering an exposed portion of the web, said sheet being marked out to define columns, each of said columns being graduated in divisions, the number of divisions in each row being half the number of divisions in the next row, said web being positioned relatively to said sheet to permit each row of indicator marks to be brought beneath a column on the sheet which has the same number of graduations as the number of indicator marks on the row of marks registrable therewith, a casing enclosing the web and its winding and unwinding means, and a cover for said casing, said cover having a window aperture over the transparent sheet.

2,437,168
TIMING APPARATUS
Leo A. Marihart, Monterey, Calif.
Application March 2, 1946, Serial No. 651,663
6 Claims. (Cl. 161—1)

1. In timing apparatus adapted to provide a series of recurrent responses in accordance with the reception of recurrent impulses, means providing a continuously moving track-way, a plurality of transfer elements slidably and frictionally engaging the trackway, trigger means associated with the trackway for retaining a plurality of said transfer elements stationary in a row one behind the other, said trigger means being adapted to be operated by received impulses to release the first element of a retained element, and means located at a station along the trackway adaptd to be actuated by a transfer element moving along the trackway after release of the same.

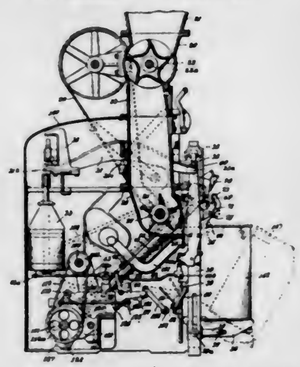
2,437,169
WASHING MACHINE WITH DIVIDED CONTAINER AND AXIAL INLET
Abe Miller, Detroit, Mich.
Application October 26, 1945, Serial No. 624,860
2 Claims. (Cl. 68—58)



1. In a washing machine comprising a horizontally disposed cylindrical tank, a perforated cylindrical container positioned for rotation within the tank, end plates enclosing the cylindrical container, drive shafts positioned coaxially with the cylindrical container at each end thereof, at least one of said drive shafts having a bore extending axially therethrough, a perforated conduit extending axially through the cylindrical container and attached to the end plates thereof, a conduit extending through the bore in the one shaft and communicating with the perforated conduit, and a coupling joint attached to the conduit extending through said bore and communicating with a source of fluid, said conduit extending through said bore having a projecting portion for extending partly within the perforated conduit.

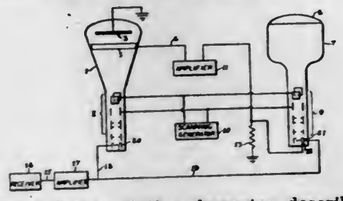
2,437,170
DODECYLAMINE SALT OF 2-MERCAPTOBENZOTHIAZOLE AND PROCESS FOR MAKING THE SAME
Arthur Minich, Westfield, N. J., assignor to Nuodex Products Co., Inc., Elizabeth, N. J., a corporation of New York
No Drawing. Application July 14, 1945, Serial No. 605,187
2 Claims. (Cl. 260—306.6)

1. As a new composition of matter, a fungicidal and insecticidal oil-soluble dodecylamine salt of 2-mercaptobenzothiazole.



2,437,171
COMPOSITE TITANIUM DIOXIDE-METAL OXIDE PIGMENT
Alphonse Pechukas, Akron, Ohio, assignor to Pittsburgh Plate Glass Company, Pittsburgh, Pa., a corporation of Pennsylvania
Application November 10, 1943, Serial No. 509,703
4 Claims. (Cl. 106—300)

1. The method of preparing a titanium dioxide pigment which comprises passing vaporized titanium tetrachloride through a porous mass of an oxide of another metal which oxide is susceptible of undergoing chlorination upon contact with titanium tetrachloride maintaining the vapor temperature sufficiently high to form and vaporize a chloride of said metal, permitting only a portion of the titanium tetrachloride to react with the oxide whereby to form a vapor mixture of the resulting metal chloride and titanium tetrachloride, removing the mixture from the porous mass and thermally reacting the vapor

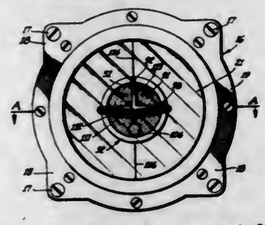


mixture with oxygen to convert the chlorides therein to oxides.

2,437,172
VALVE BAG FILLER
William R. Peterson, Oswego, N. Y., assignor to St. Regis Paper Company, New York, N. Y., a corporation of New York
Continuation of application Serial No. 507,521, October 25, 1943. This application May 4, 1946, Serial No. 667,418
12 Claims. (Cl. 249—60)

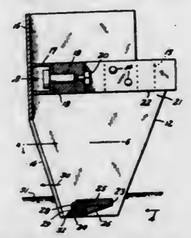
3. Apparatus for filling valve bags comprising a scale beam, a bag support mounted on the load end of the beam and comprising a spout adapted to enter the valve of a bag, a housing having a discharge opening normally in line with the spout, means to drive powdered material and air from the housing through the opening and spout into a bag thereon, a gate for the opening, a spring urging the gate toward closing position, mechanical means for opening the gate, a latch for holding the gate open, means releasing the latch when the load end of the beam descends in response to a charge in a bag on the support, a clamp for clamping a bag on the spout, means connected to the gate and releasing the clamp when the gate is closed, a spring operated pusher for discharging a filled bag, mechanical means for compressing the last said spring and a latch for holding it compressed, means connected with the gate for releasing the latch when the gate is closed, and timing means connected with the pusher for delaying the effective discharging action of the pusher for a predetermined interval after the gate is closed before the bag is discharged.

2,437,173
DEVICE FOR DISCRIMINATING BETWEEN FIXED AND MOVING OBJECTS
Robert E. Rutherford, Nutley, N. J., assignor to Allen B. Du Mont Laboratories, Inc., Passaic, N. J., a corporation of Delaware
Application July 27, 1945, Serial No. 607,355
13 Claims. (Cl. 315—9)



1. In a device of the character described, a cathode-ray tube having a screen, a cathode-ray tube having its control grid in parallel with the control grid of said first named tube and having a storage dielectric, and means to apply a signal from said second named tube to a beam intensity controlling electrode of the gun structure of said first named tube.

2,437,174
PRODUCTION OF ACTIVE CARBON
Frank Kerr Signaigo, Kenmore, N. Y., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application June 2, 1945, Serial No. 597,369
3 Claims. (Cl. 252—286)



1. A method for producing highly-absorbent, active carbon in sheeted form comprising impregnating a sheeted, cellulosic material with a solution of a boron compound selected from the group consisting of boric acid and compounds which on ignition yield boric acid until 1–15% by weight of the boron compound is impregnated, igniting the material so impregnated and allowing the same to burn in an excess of air, and then water extracting residual boron compounds from the resulting active carbon product.

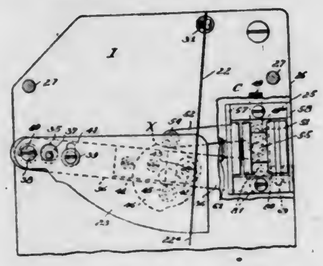
2,437,175
GYROSCOPIC FLIGHT INDICATING INSTRUMENT
Thomas O. Summers, Jr., Los Angeles, Calif.
Application December 8, 1942, Serial No. 468,189
7 Claims. (Cl. 33—204)

7. A flight indicating instrument for aircraft comprising, in combination, an indicator housing for mounting on an aircraft; a gyro-vertical universally mounted in said indicator housing; a cylindrical housing member movable with and stabilized by said gyro-vertical, the axis of said housing member being parallel to the longitudinal axis of the aircraft; a transparent indicating face member mounted at the forward end of said housing member; an opaque circular partition mounted intermediate the ends of said housing member; an axial shaft pivotally mounted in said housing member and extending through said partition; a pendulous weight secured to said shaft behind said partition for pivotal movement in a transverse plane in response to transverse acceleration forces; a pendulum indicator secured to said shaft between said face member and said partition to indicate such transverse acceleration forces; means in said housing member operative to dampen oscillation of said pendulous weight; an aircraft attitude indicator pivotally mounted on said housing member in front of said face member for oscillation in a transverse plane; means movable with said housing and operative to oscillate said attitude indicator to simulate banking of the aircraft; a second attitude indicator adjustably secured to said housing and arranged adjacent said first attitude indicator and movable vertically relative thereto to simulate pitching of the aircraft; and means for adjusting said second indicator to align said attitude indicators when the aircraft is in its normal fore and aft flight attitude.

2,437,176
UNDERGROUND CUTTER FOR TREES
Willard O. Taylor, Ranger, Tex.
Application February 1, 1946, Serial No. 644,881
3 Claims. (Cl. 37—2)

1. In association with a tractor having a bulldozing frame adapted to be lowered and raised, a pair of spaced side plates secured to the front ends of said framework and extending forwardly and downwardly therefrom, a bulldozer connecting the forward extremities of said plates partially along the length thereof, a sharp edge along the remaining portions of said extremities, a reinforcing channel between said plates and immediately adjacent to said bulldozer, a horizontal carrier connecting the lower ends of said plates, and an arcuate, horizontaly extending cutting blade detachably secured to said carrier, said blade engaging said trees below the surface of the ground.

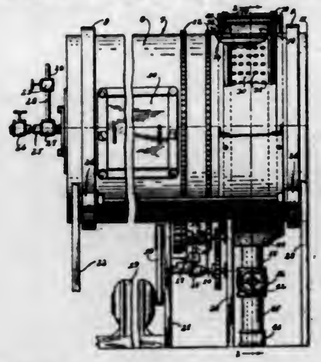
2,437,177
METHOD OF CASTING AND APPARATUS THEREFOR
Thomas O. Theobald, Royal Oak, Mich.
Application October 28, 1944, Serial No. 560,784
3 Claims. (Cl. 22—134)



1. A snagging washer to be inserted in a riser of a casting mold comprising, a flat thin sheet

metal stamping formed of shim stock having an opening therein, said opening proportioned to reduce the cross sectional area of the riser to about two-thirds, and a plurality of tongues stamped

from the material of said washer, said tongues projecting slightly beyond the periphery of the washer and extending back into the body of the washer a major portion of the distance therethrough, for the purpose described.

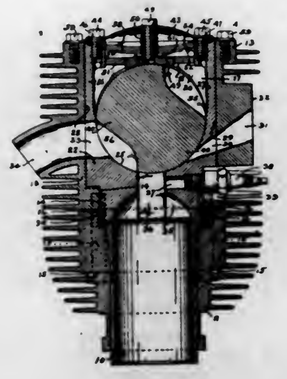


2,437,178
INTEGRATOR
Armistead Wharton, Thompson's Point, Vt., assignor to Taylor Instrument Companies, Rochester, N. Y., a corporation of New York
Application July 21, 1944, Serial No. 546,042
1 Claim. (Cl. 235—61)

In a mechanism for integrating a variable quantity with respect to time having a means for introducing a uniform time factor and instrumentalities responsive to a second variable factor, a sensing means periodically operated by said time factor introducing means, a pivoted element substantially inextensibly connected with said variable factor responsive instrumentalities for oscillation thereby, and an elongated member rigidly attached to said pivoted element for oscillation therewith and having an abutment portion at the free end thereof cooperating with said sensing means, said element being flexible in the direction of its movement substantially along its length, whereby said pivoted element may be adjusted by said variable factor responsive means while the abutment of said elongated member is engaged and retained by said sensing means.

2,437,179
PERIPHERAL DRAIN MEANS FOR LAUNDRY MACHINES
Edward A. Wheeler, Chicago, Ill.
Application March 18, 1947, Serial No. 735,324
6 Claims. (Cl. 68—144)

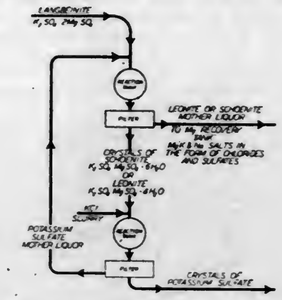
1. In a laundry machine of the character described, drum means rotatably confined and provided with perforated peripherally cylindrical drain means embracing a comparatively small peripheral portion adjacent one end of the said drum means, annular walls secured to the said drum means on each side of the said cylindrical drain means, stationary drain means sealably confining the said annular walls, splash guard means encasing the said stationary drain means and supporting the same, the said stationary drain means



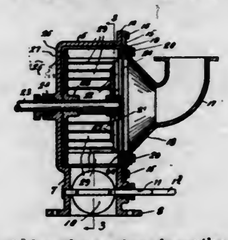
terminating in a downwardly depending outlet, and valve means secured to the said outlet.

2,437,180
ELECTRICAL CONNECTOR
Edward J. Allen, Cleveland, Ohio, assignor to The Leece-Neville Company, Cleveland, Ohio, a corporation of Ohio
Application January 10, 1945, Serial No. 572,137
2 Claims. (Cl. 173—328)

1. An electrical connector comprising a housing member having a hollow cylindrical portion, a second housing member having a cylindrical plug portion adapted for relative rotary telescoping engagement in the hollow cylindrical portion of the first housing member, a group of contacts mounted in the first housing member and having curved portions disposed in spaced relation in an annular series adjacent the wall of said hollow cylindrical portion and forming a cylindrical lining therein, said curved portions having slots formed therein and which include substantially axially extending locking recesses, contacts carried by the plug portion of said second housing member and having locking projections engageable in said slots and adapted to seat in said locking recesses, and resilient means between said housing members and tending to cause axial separation thereof for holding said projections in said locking recesses, said plug portion being axially and arcuately slidable in said cylindrical lining during said relative rotary telescoping engagement, said second housing member also having a sleeve portion extending coaxially around said plug portion and spaced therefrom and being arcuately and axially slidable around the hollow cylindrical portion of said first housing member during said relative rotary telescoping engagement.



2,437,181
ROTARY VALVE MOUNTING
Erwin G. Baker, Indianapolis, Ind.
Application July 19, 1946, Serial No. 684,882
8 Claims. (Cl. 123—80)

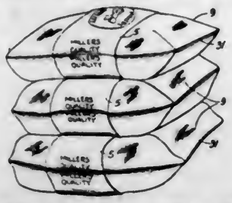


1. The combination with an engine cylinder of an engine head; a valve cage; said head having a chamber therein to receive said cage in sliding relation longitudinally of said cylinder; a cylindrical portion extending from said cage toward said cylinder, said head having a bore slidingly receiving said portion; a cylindrical valve; said head chamber having a circular opening in opposite side walls thereof, the openings having a larger diameter than that of said valve; a valve seat in said cage over said portion, conforming in curvature to that of said valve and extending at most not over one-half of the circumference of said valve; said cage having intake and exhaust passages opening through said seat, and further having a passage leading from said seat through said cage portion, and said valve having slots thereacross to register selectively with openings of said passages; said valve having a length to have its end portions enter respectively into said chamber openings; a shoe bearing on said valve on a side thereof opposite said seat; spring means carried by said cage to retain said shoe against said valve by a predetermined pressure; other spring means yieldingly resisting outward travel of said cage in respect to said head chamber; and means for revolving said valve on said seat.

2,437,182
POTASSIUM SULPHATE MANUFACTURE
James A. Barr, Evanston, Ill., and William A. Smith, Carlsbad, N. Mex., assignors to International Minerals & Chemical Corporation, a corporation of New York
Application April 15, 1943, Serial No. 483,100
1 Claim. (Cl. 23—121)

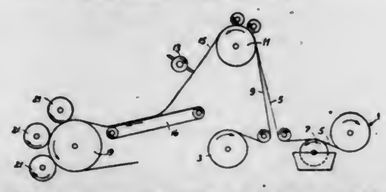
The improvement in the art of making potassium sulphate, which consists in hydrating comminuted langbeinite, at a temperature of between 100° F. and 140° F. for from six to two hours, in potassium sulphate mother liquor to form crystals of hydrated $K_2SO_4MgSO_4$, separating the crystals from the liquor resulting from the hydration step, reacting said crystals in an aqueous medium containing KCl so as to form a precipitate of potassium sulphate in a mother liquor, separating the precipitate from the mother liquor, using the latter liquor for the hydration of a subsequent batch, and repeating the process.

2,437,183
BLOWER
Otto G. Berg, Spokane, Wash.
Application February 22, 1945, Serial No. 579,199
1 Claim. (Cl. 230—119)



A device of the character described comprising a casing having an annular wall and a side wall and being open at its other side, an outlook neck extending from the annular wall and adapted to be connected with the intake of an engine, a ring removably mounted about the open side of the casing, an inlet neck having its outer end adapted for connection with a carburetor and having its inner end portion flared and removably secured to said ring about the inner periphery thereof, and rotatably mounted through the side wall of said casing centrally thereof, and extending transversely through the casing axially thereof, a cage fan in said casing having a flat side wall formed with a central hub mounted about said shaft adjacent the side wall of the casing and carrying blades having ends secured to the flat side wall in spaced relation to each other about the periphery thereof and braced by a ring secured to ends of the blades adjacent the inner surface of the ring at the open side of the casing, and a suction fan within the cage-fan having a hub firmly mounted about the shaft at the open side of the cage-fan and blades extending radially from its hub with their outer ends terminating adjacent the ring of the cage fan.

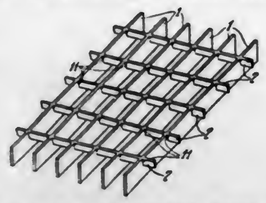
2,437,184
LABELED FABRIC BAG AND THE LIKE
Charles V. Brady and August F. Ottinger, St. Louis, Mo., assignors to Bemis Bro. Bag Company, St. Louis, Mo., a corporation of Missouri
Application February 21, 1945, Serial No. 578,976
3 Claims. (Cl. 150—1)



1. A labeled bag comprising a rectangular blank of fabric material folded upon itself so

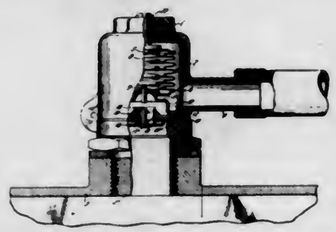
that its marginal edges are adjacent each other, thereby forming front and back bag walls, a stitched, inturned seam securing said adjacent marginal edges of the blank together, a continuous printed paper label strip peripherally encircling the outside of the folded blank and secured throughout its area to the blank by a water-soluble adhesive thus permitting the strip

ultimately readily to be removed from the blank, said strip traversing the fold of the blank and extending completely from one of the adjacent edges of the blank to the other with its ends inturned with the seam at said edges and caught in said seam, the width of the label strip being narrower than the dimension of the bag walls crosswise of the strip.



2,437,185
METHOD OF MAKING LABELED BAGS AND THE LIKE
Charles V. Brady and August F. Ottinger, St. Louis, Mo., assignors to Bemis Bro. Bag Company, St. Louis, Mo., a corporation of Missouri
Original applications May 10, 1944, Serial No. 535,004, and February 21, 1945, Serial No. 578,976. Divided and this application February 9, 1946, Serial No. 646,577
5 Claims. (Cl. 112—10)

1. The method of applying labels to and forming bag-like coverings for packaging comprising withdrawing from a supply a continuous web of cover-forming material; withdrawing from a second supply a continuous narrower strip of label-forming material; continuously adhesively combining the web with the label-forming strip between and spaced from the edges of the web: transversely cutting the combined web and strip into a bag-forming blank; folding said blank into bag form with its strip inside; stitching the edges of said folded blank to form a bag seam with both ends of said strip caught in the seam; and turning the bag so formed inside out to present the label strip on the outside but caught in the seam.

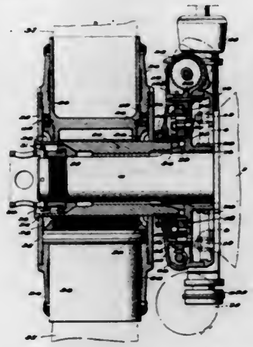


2,437,186
GRATING AND METHOD OF MAKING THE SAME
Tappan Collins, Pittsburgh, Pa., assignor to Carnegie-Illinois Steel Corporation, a corporation of New Jersey
Application May 27, 1944, Serial No. 537,668
6 Claims. (Cl. 189—82)

6. A grating of the character described, including at least two series of members connected in intersecting relation, the second series of members having portions of cuneiform section entered within the edges of the first series of members substantially flush with said edges, the said portions having a taper converging inwardly from said edges, the connections between said portions

and the first series of members being characterized by substantially full area welds and fillet-like extruded portions at the angles between the said members, the said cuneiform portions having a depth in the direction of their taper at least twice the maximum width thereof transversely of said taper.

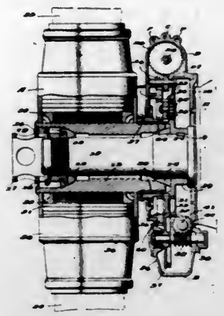
2,437,187
VALVE FOR AIRCRAFT COOLING SYSTEMS
Jesse E. Eshbaugh, Flint, Mich., assignor to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application January 14, 1944, Serial No. 518,279
2 Claims. (Cl. 137—153)



2. An engine cooling system pressure relief valve assembly including a casing open to external atmosphere and having a system vent for connection with the system, an outwardly opening main valve to close said vent, an aneroid having axially spaced end walls, one of which is fixed to the casing and the other of which is fixed to the valve in axially spaced relation thereto in its peripheral portion and so arranged as to present to atmosphere an effective surface area substantially equal to the effective valve surface area presented to atmosphere, an inwardly opening valve carried by the main valve so that when open the system vent communicates with external atmosphere through the space between the main valve and the adjacent end wall of the aneroid, and spring means interposed between the aneroid end walls to seat the main valve against the vent pressure.

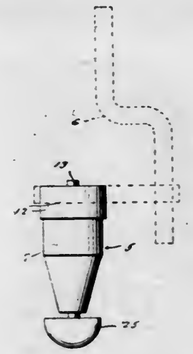
2,437,188
SELF-CONTAINED VARIABLE PITCH PROPELLER UNIT
Archibald Graham Forsyth, Cheam, England, assignor to The Fairey Aviation Company Limited, Hayes, Middlesex, England
Application January 19, 1943, Serial No. 472,882
4 Claims. (Cl. 170—163)

1. A control unit for variable pitch propeller systems having propeller hub structure provided



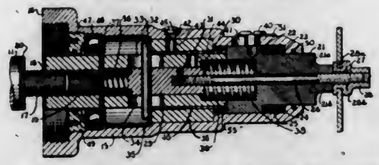
with pitch changing gearing, said unit being dimensioned to be removably positioned surrounding the propeller drive shaft between the propeller hub structure and the engine with the propeller drive shaft extending entirely through the unit, said control unit comprising a sleeve extending substantially the entire axial length of the unit and comprising the annular inner wall of the unit, means mounting said sleeve in a position surrounding the propeller drive shaft for rotation therewith, gear teeth on said sleeve, a stationary toothed ring gear coaxially mounted about said sleeve and radially spaced therefrom, a ring spider surrounding said sleeve, pairs of pinions carried by said spider, one pair of said pinions engaging the teeth on said sleeve and

the teeth on said ring gear, a second toothed ring gear mounted for rotation about said sleeve, a third toothed ring mounted for rotation on a portion of said sleeve, a second pair of said pinions engaging said second toothed ring gear and said third toothed ring, motor means for driving said second toothed ring gear, said third toothed ring having a gear portion engageable with the pitch changing gearing of the propeller hub structure, and a housing, said housing supporting said motor means, said housing and said sleeve together comprising a complete enclosure for all of the other named elements of said unit with the exception of said gear portion and said motor means, and providing unitary support for the entire unit.



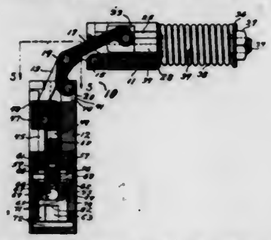
2,437,189
SELF-CONTAINED UNIT FOR VARIABLE PITCH PROPELLERS
Archibald Graham Forsyth, Cheam, England, assignor to The Fairey Aviation Company Limited, Hayes, Middlesex, England
Application February 25, 1943, Serial No. 477,155
15 Claims. (Cl. 170—163)

1. A variable pitch propeller device comprising a hub unit adapted to be mounted on a propeller drive shaft extending from an engine to rotate with said shaft, said hub unit including pitch changing means, a self-contained control unit mounted to surround said propeller drive shaft between said hub unit and the front facing of the engine, said control unit comprising gearing connected with said propeller blade mountings, a shaft driven by the propeller drive shaft, a governor driven by said shaft, hydraulically actuated clutch means for clutching said shaft to said gearing, a fluid pump driven by said shaft for forcing fluid under pressure to said clutch means to actuate the same, valve means for controlling fluid pressure at said clutch means, said valve means including a governor controlled valve



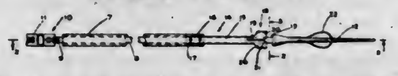
and at least one cam controlled valve, said cam being actuated by said gearing.

2,437,190
MANUALLY CONTROLLED TRACER
Harold W. Gale, Dearborn, Mich., assignor to Hexagon Tool and Engineering Corporation, Dearborn, Mich.
Application July 26, 1944, Serial No. 546,683
3 Claims. (Cl. 33—169)



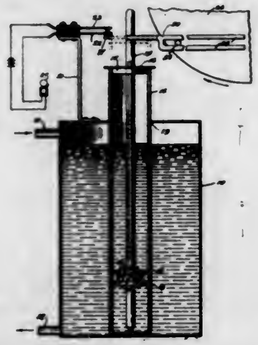
1. A tracer of the class described comprising a longitudinally elongated, centrally bored barrel having a reduced portion at its lower end provided with an annular beveled seat, the upper portion of the bore being circumferentially enlarged and the intermediate portion being provided with an annular beveled seat merging into said reduced portion, an adapter body of general semi-spherical form located in the upper portion of the bore and engaging the adjacent beveled seat, a spring-pressed end thrust pressure unit mounted in the upper portion of the bore and engaging the adapter, a stem having its major portion located in the reduced portion of the bore, its upper end universally connected with the central portion of said member, and its intermediate portion provided with a ball-joint element engageable with the beveled seat at the outer end of the reduced part of the bore, said stem projecting beyond said barrel to accommodate a detachable tracer element.

2,437,191
UPSETTING TOOL FOR HOLLOW RIVETS
Ray H. Gill, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a corporation of New York
Application December 24, 1941, Serial No. 424,297
13 Claims. (Cl. 218—19)



1. Apparatus for upsetting a hollow threaded rivet, said apparatus comprising a mandrel having a threaded portion engageable in the threaded bore of the rivet, an anvil engageable with the rivet, a support for the mandrel and the anvil, the anvil being movable with relation to said support and along the mandrel, resilient means urging said anvil with relation to said support in a direction away from the threaded end of said mandrel, and means for moving said anvil in the opposite direction against said resilient means to upset a rivet engaged by the threaded end of said mandrel.

2,437,192
HINGE
Joseph J. Glanz, New Haven, Conn., assignor to Aircraft Tools, West Haven, Conn., a partnership
Application August 7, 1945, Serial No. 609,436
11 Claims. (Cl. 16—50)



1. Hinge-means including: a pair of hinge-leaves each having a face, and said leaves hinged together to provide hinging-movement toward and from a closed position; spring-means adapted to move said leaves toward said closed position; and check-means located between the top and bottom and behind said face of, and supported by one of said leaves and employing liquid actuated by a piston having a direction of movement substantially at right angles to said face of the leaf, by which leaf said check-means is supported, and adapted to controllably resist the closing-action of said spring-means.

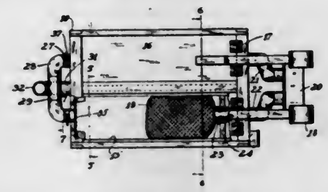
2,437,193
PARAFFIN DISLODGING TOOL
Adolph W. Hanke, Weleetka, Okla.
Application February 1, 1945, Serial No. 575,662
2 Claims. (Cl. 166—18)

1. A paraffin dislodging tool for oil well casings comprising an elongated open-ended tubular body provided at one end with diametrically opposite resilient arms extending forwardly thereof and terminating in semi-circular coacting cutting and surface scraping knives, a rod slidable through and extending beyond opposite ends of said tubular body, said rod being provided on its actuating or upper trailing end with coupling means, a spearhead on the working or leading end of the rod, and said spearhead operating in reciprocatory relation between and outwardly beyond the cutting knives and having a cleaning element thereon to whirl against said knives for keeping same clean and in working order, said coupling means and spearhead being disposed outwardly of the respective opposite ends of said tubular body and constituting longitudinally spaced stop shoulders engageable with said opposite ends.

2,437,194
CONSISTOMETER
Bertie S. Harrington, Chicago, Ill., assignor to Armour and Company, Chicago, Ill., a corporation of Illinois
Application May 31, 1945, Serial No. 596,964
8 Claims. (Cl. 73—54)

1. A device for determining the consistency of materials, such as oils and fats, which when in liquid form thicken upon chilling, comprising a tank for containing a chilling medium, a tube for containing such liquid and adapted to be suspended in said medium, said tube being adapted to be reciprocated within said medium, a sleeve slidable within said tube, and means for reciprocating said sleeve within said tube until upon the thickening of the liquid the tube moves with said sleeve a predetermined distance.

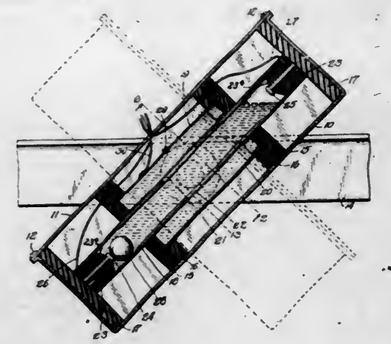
2,437,195
CIRCULAR KNITTED STOCKING
Arthur Leonard Hunt, Nottingham, England, assignor to George Edwards & Sons, Limited, Somercotes, Derbyshire, England
Application June 12, 1944, Serial No. 539,907
In Great Britain May 31, 1943
1 Claim. (Cl. 66—187)



A method of knitting by oscillation the toe pouch of a stocking on a circular knitting machine wherein the foot is knitted by rotation, which consists in rendering substantially half of the needles inoperative and causing them to hold their loops, knitting a plurality of selvedged courses by oscillation on all the remaining active needles, narrowing during oscillation by progressively reducing the number of needles in the active group by progressively rendering needles

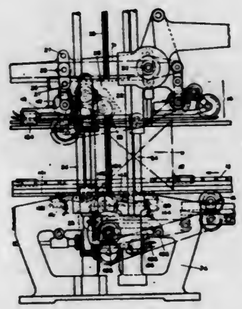
at both ends thereof inactive but causing them to hold their loops, widening during oscillation by progressively increasing the number of needles in the active group by progressively reintroducing loop-holding needles into activity at each end thereof, narrowing again in the same

manner as in the first narrowing, widening again in the same manner as in the first widening until all the needles of the original active group are again active, and knitting a plurality of selvedged courses by oscillation on all the needles of the original active group.



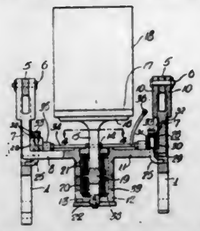
2,437,196
PILLOW FILLING MACHINE WITH SUCTION CREATING MEANS
Daniel Huttner and Richard S. Kramer, Chicago, Ill.; said Kramer assignor to said Huttner
Application May 13, 1944, Serial No. 535,457
2 Claims. (Cl. 226—43)

2. Apparatus for filling a pillow case or the like with loose material, comprising a casing having a pair of horizontally disposed pillow receiving chambers disposed side by side and each being of greater dimensions in all directions than the size of the pillow, a material inlet pipe extending into each of said chambers from one end thereof and spaced from the adjacent chamber wall portions, a suction pipe at the opposite end of each of said chambers, driven suction creating means attached to said suction pipe, a pair of convergently depending supply pipes connected with their upper ends to the outer end of each of said inlet pipes beyond the end of said casing, and a substantially horizontal and centrally-positioned floor-adjacent material receiver having laterally spaced openings receiving the lower ends of said supply pipes.



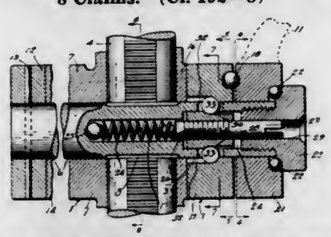
2,437,197
TIME-DELAY SWITCH
Cecil B. Ivester, Sunray, Tex., assignor to Continental Carbon Company, a corporation of Delaware
Application May 12, 1945, Serial No. 593,422
7 Claims. (Cl. 200—33)

3. In a time delay switch having a reciprocable metal tube, a fluid therein, contacts in said tube, and a metal ball adapted to move through said tube to engage a contact and complete a circuit between the contact and the tube; an expansion chamber above said tube; a sediment chamber



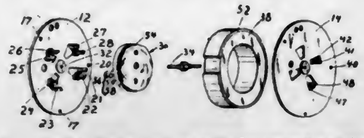
below said tube, and passageways connecting said tube and chambers.

2,437,198
PACKAGING MACHINERY
James Arthur Kay, Gainsborough, England, assignor to Rose Brothers (Gainsborough) Limited, Gainsborough, England, a British company
Application July 8, 1944, Serial No. 544,050
In Great Britain March 27, 1943
9 Claims. (Cl. 91—50)



1. Packaging apparatus of the type described, comprising means for feeding a succession of containers through the apparatus with their inside flaps folded into closed position and their outside flaps folded outwardly preparatory to the application of glue thereto, a glue-applying roller, operating means for moving the glue-applying roller into gluing engagement with the outside flaps of the containers during their passage through the apparatus, and a feeler member movably mounted in the apparatus with its feeler projecting into the path followed by the folded inside flaps of the containers so as to be engaged thereby and moved into an operative position during the passage of the containers through the apparatus and maintained in that position during continuance of such engagement, and means inter-connecting the operating means and the feeler member and responsive to said movement of the feeler member for causing operation of said operating means.

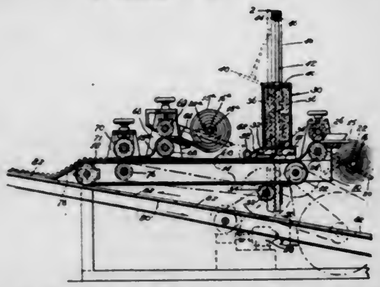
2,437,199
SEAT FOR USE IN AIRCRAFT
Philip Kirk, Philadelphia, Pa.
Application February 8, 1946, Serial No. 646,380
7 Claims. (Cl. 155—77)



1. A seat structure comprising a pair of laterally spaced side frames, a cradle comprising a pair of side arms and a horizontal cross beam connecting said side arms, horizontal pivots mounted in said side frames for pivotally supporting said side arms thereon, a seat carried by said cradle and including a pedestal slidably mounted in said cross beam intermediate said side arms, and resilient means for normally supporting said seat in a predetermined position with respect to said cross beam.

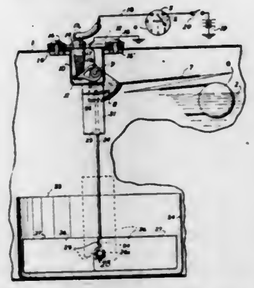
2,437,200
CLAMPING DEVICE
Fred W. Kuppersmith, Bloomington, Ill.
Application February 15, 1946, Serial No. 647,926
8 Claims. (Cl. 192—8)

1. A clamping device comprising two relatively adjustable members and means for effecting relative adjustment of said members and holding them in adjusted position comprising a rotatable shaft for adjusting said members, a first friction face element rotatable with said shaft and held against axial movement thereon, a second friction face element held against rotation and axial movement and engageable with said first friction element for holding the shaft against rotation, a third friction face element rotatable with said shaft, nonrotatable with respect thereto and axially movable thereon, a fourth friction face element held against rotation and axial movement and engageable with said third friction face element for holding the shaft against rotation, spring means tending to separate said engageable friction face elements, and actuating means for rotating said shaft when the friction face elements are not engaged and forcing the engageable friction face elements into engagement when the shaft encounters increased resistance to rotation comprising an actuating element mounted on said shaft and having a limited rotation with respect thereto, and cam means acting when the shaft encounters resistance and the actuating means are rotating with respect to said shaft to force the engageable friction face elements into engagement.



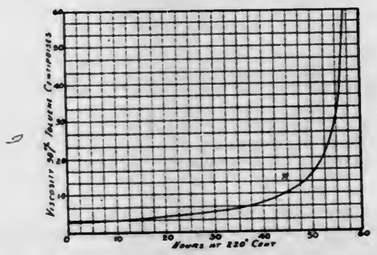
2,437,201
SYNCHRONOUS ELECTRIC CLOCK MOTOR
Francis J. Landgraf and Richard P. Landgraf, Chicago, Ill.
Application June 16, 1947, Serial No. 754,890
12 Claims. (Cl. 172—278)

1. In combination in a synchronous motor of the class described, a pair of magnetic plates, each plate having a plurality of pole-piece tongues integral with the plate and struck therefrom, said tongues having their roots lying on a circle, and being cut from the portion of the plate within said circle to leave spokes for supporting a center bearing, a center bearing so supported, said tongues extending perpendicular to the plate, means for spacing said plates parallel to each other with said pole pieces concentric and interspaced, a magnetic rotor carried between said plates in the center bearings thereof to be magnetically controlled by said pole pieces, and a coil lying between said plates and encircling said pole pieces.



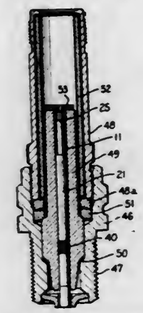
9. In combination in a synchronous motor of the class described, a pair of magnetic plates, each plate having a plurality of pole-piece tongues integral with the plate and struck therefrom, said tongues extending substantially perpendicular to said plate and having their roots lying on a circle, and being cut from the portion of the plate within said circle to leave spokes joined at the center of said circle, means for spacing said plates parallel to each other with said pole pieces concentric and interspaced, a magnetic rotor surrounded by said pole pieces and rotatably supported at the center of said circle on each plate, a coil lying between said plates and encircling said pole pieces, and shading means on such of said pole pieces as will produce rotation of the rotor when said coil is energized.

2,437,202
RAVIOLI MACHINE
Salvatore Marino, Chicago, Ill.
Application February 28, 1945, Serial No. 580,159
10 Claims. (Cl. 107—1)



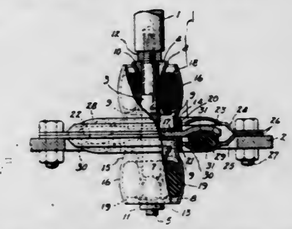
1. In a ravioli machine, a forming cylinder comprising a shaft, a plurality of circular units assembled on said shaft and each having a single series of outwardly open pockets extending circumferentially in its surface, a plurality of annular cutting members interposed between adjacent units and adjacent the outer ends of the end units of the cylinder, the pockets of said units being alined in rows extending parallel to the shaft axis, said units and cutting members having notches which form continuous slots extending longitudinally of the cylinder between adjacent rows, and cutting blades secured in said slots.

2,437,203
FUEL TANK GAGE
William McCandless, Toledo, Ohio
Application May 5, 1945, Serial No. 592,138
8 Claims. (Cl. 73—313)



1. In a gage for indicating a liquid level in a container, a float, mechanism for translating to an indicator the rise and fall of the float with the liquid, a member submerged in a segregated portion of the liquid and rotatable therein against the resistance of said liquid, and high ratio toothed gearing means interconnected with said member and mechanism, said gearing operable by movement of said float for rotating said member at a high rate of speed whereby resistance of the liquid to the rotation of the member is imparted to the float; providing a dampener connection against rapid oscillations of the float.

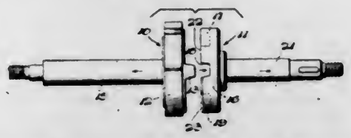
2,437,204
SULFURIC ACID POLYMERIZATION OF DIORGANOSILOXANES
Rob Roy McGregor, Verona, and Earl Leathen Warrick, Pittsburgh, Pa., assignors to Corning Glass Works, Corning, N. Y., a corporation of New York
Application March 30, 1943, Serial No. 481,143
6 Claims. (Cl. 260—607)



1. The method of polymerizing a dehydrated liquid consisting of the dehydrated liquid polymeric diorganosiloxane in which each of the silicon atoms of said siloxane has two and only two organic radicals attached to each silicon atom, one of the two organic radicals attached to each silicon atom being an alkyl radical and the other organic radical being selected from the class consisting of alkyl and aryl radicals, which comprises adding sulphuric acid to said siloxane and maintaining said acid in reactive relationship with said siloxane at a temperature below 250° C. until an increase in viscosity is effected.

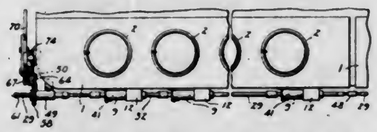
2,437,205
SPARK PLUG
Leslie H. Middleton and Delbert Henry Stoltenberg, Toledo, Ohio
Application October 7, 1942, Serial No. 461,196
3 Claims. (Cl. 123—169)

3. In a spark plug, an insulator with a longitudinal bore of uniform cross section and external shoulders adapted to cooperate with an embracing metallic shell, a cylindrical electrode positioned in the bore substantially filling the bore and extending beyond the insulator to a predetermined position with reference to the external shoulders, a shoulder on the electrode adjacent the outer end of the insulator formed between the lower larger portion of the electrode and a smaller portion of less cross-sectional area than the bore to form a space between the electrode and the bore, and a body of compacted material positioned against the shoulder in the space between the smaller portion of the electrode and the bore to form a holding and sealing body between the electrode and the insulator.



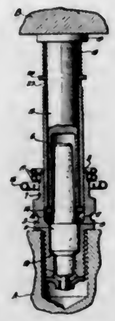
2,437,206
SHOCK ABSORBING DEVICE
Eldon Paul Neher, North Manchester, Ind., assignor to The General Tire & Rubber Company, Akron, Ohio, a corporation of Ohio
Application December 22, 1945, Serial No. 636,547
5 Claims. (Cl. 248—358)

1. A flexible vibration damping connection comprising an inner connecting member including a disc, an outer annular connecting member encircling the disc and having an interiorly facing channel receiving the disc, and a series of



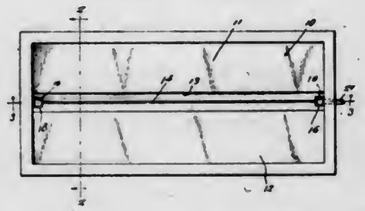
circumferentially spaced cushioning blocks interposed between the disc and the walls of said channel, said blocks being disposed alternately between the disc and opposite side walls of the channel.

2,437,207
CLUTCH
Paul A. Noxon, Tenafly, N. J., assignor to Bendix Aviation Corporation, Bendix, N. J., a corporation of Delaware
Application February 13, 1943, Serial No. 475,813
1 Claim. (Cl. 192—67)



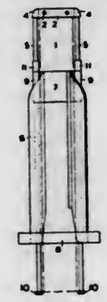
A clutch comprising driving and driven members having coengaging faces perpendicular to their axes and parallel to each other, one of said members being provided with a pair of diametrically arranged lugs of equal size projecting axially from its face and the other of said members being formed with a plurality of receptive slots in its face of equal size with the lugs and constituting a multiple of the number of lugs, with pairs arranged in diametrically opposed relation, the connecting surfaces between alternate pairs of slots being continuously flat and of equal length but longer than the lugs with alternate surfaces arranged in high and low planes respectively, whereby when the members are moved toward and rotated relative to each other, the lugs will engage and move over the low surfaces and slots at the ends thereof until they engage the adjacent ends of the high surfaces at the remote sides of said slots to cause interfitting engagement of the lugs with the slots, the bottoms of said slots being in a common plane spaced from but parallel to the planes of the connecting surfaces.

2,437,208
TWISTER RING LUBRICATING DEVICE
Daniel K. Pope, Thomaston, Ga.
Application August 15, 1946, Serial No. 690,637
11 Claims. (Cl. 57—120)



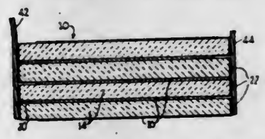
1. In a twisting machine in which the spindles are centered in traveler rings and in which a series of rings reciprocate simultaneously with respect to the spindles, a supporting member mounted in a fixed position with respect to each of said rings, a lubricant reservoir carried by each supporting member and having an outlet, a plunger in each reservoir for forcing lubricant through the reservoir outlet, a conduit connecting each reservoir outlet to the interior of a ring, a shaft journaled in said supports, means for imparting a predetermined turning movement to said shaft upon each relative reciprocating movement to said shaft upon each relative reciprocating movement of said rings and spindles, and an actuator for each plunger geared to said shaft.

2,437,209
METHOD OF MAKING SPARK PLUGS
Hector Rabezzana, Flint, Mich., assignor to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application August 11, 1942, Serial No. 454,418
4 Claims. (Cl. 113—112)



3. In the manufacture of a spark plug which includes a shell with a seat for an insulator, an insulator disposed within the shell with a portion in contact with the seat, and a shield which extends into the shell and holds the insulator in contact with the seat so that gas cannot pass between it and the shell; the operations of disposing between the shield and the insulator a member which is separate from the shield and the insulator, applying axially of the spark plug sufficient pressure to the member, without applying such pressure to the shield, to move the member axially of the spark plug with respect to the shell as a whole and to hold the insulator in contact with the seat so that gas cannot pass between it and the shell, and, while the pressure is thus applied, metallically bonding the shield to the shell in a position to hold the insulator in contact with the seat so that gas cannot pass between it and the shell.

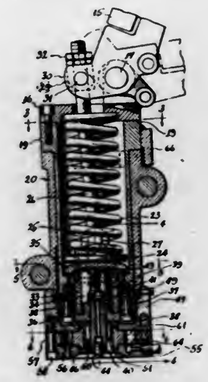
2,437,210
DRAINAGE SYSTEM FOR STABLES
Walter W. Riebli, Oakland, Calif.
Application October 18, 1944, Serial No. 559,196
2 Claims. (Cl. 119—28)



1. In a drainage system for stables, oppositely disposed floor sections having inclined converging surfaces terminating short of each other to form a longitudinally extending drain slot, an inclined drain pipe disposed below said floor sections formed with a longitudinally extending slot disposed below and registering with said drain slot formed by the adjacent edges of said floor sections, and a receptacle formed with a vertically extending slot connecting with the longitudinally extending slot in said drain pipe whereby a cleaning device may be inserted in said receptacle and drawn through said pipe to clean the same.

2,437,211
ROCKET
Conrad David Schermuly, Alfred James Schermuly, and Charles Schermuly, Parkgate, Newdigate, England, assignors to The Schermuly Pistol Rocket Apparatus Limited, Parkgate, Newdigate, Surrey, England, a British company
Application July 25, 1944, Serial No. 546,482
In Great Britain June 23, 1943
4 Claims. (Cl. 102—50)

3. A rocket comprising a casing, and a plurality of rods each secured adjacent the forward end of said casing and extending rearwardly therefrom in spaced relation to said casing, in combination with a tail unit comprising a collar surrounding the rocket casing and sleeves adapted to slide along the rods.

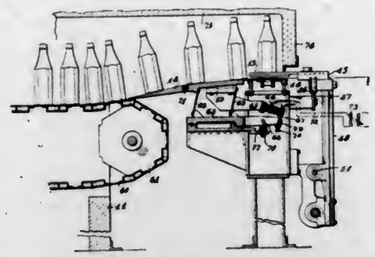


2,437,212
ELECTRIC CONDENSER AND METHOD FOR MAKING THE SAME
Frederic D. Schottland, Forest Hills, N. Y.
Application December 23, 1942, Serial No. 469,864
12 Claims. (Cl. 175—41)

1. A condenser comprising a plurality of stacked ceramic plates, each of whose upper and lower surfaces have metallic coatings of similar sizes and shapes thereon, said coatings having boundary edges, the plates being arranged so that the metallic coatings on juxtaposed faces are in substantial registration, said coatings being fused together so that the edges thereof are exactly registered.

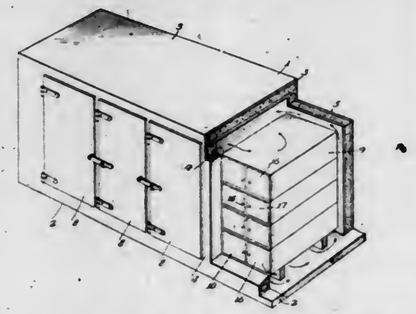
9. A method of making condensers which include a plurality of ceramic plates each of whose upper and lower surfaces have metallic coatings of similar sizes and shapes thereon said coatings having boundary edges, said method comprising the steps of assembling the plates in stacked relationship with the metallic coatings on juxtaposed surfaces of adjacent plates in substantial registration and then exactly registering the edges of said coatings by heating said stacked plates to the fusion temperature of said coatings.

2,437,213
TROLLEY POLE POSITIONING MEANS
Joseph J. Siomer, Chicago, Ill., assignor to Goodman Manufacturing Company, Chicago, Ill., a corporation of Illinois
Application November 13, 1944, Serial No. 563,175
1 Claim. (Cl. 191—70)



In a trolley pole, a pole having a current collector on its outer end adapted to engage a trolley wire and collect current therefrom, a socket, a support member mounted within said socket for pivotal movement with respect thereto about a vertical axis, a transverse pivotal connection between said pole and said support member, a rod connected with said pole adjacent one of its ends, a spring urging said rod in a direction to move said pole into an upright position and to hold said current collector in engagement with a trolley wire, and power means for turning said support member within said socket to laterally move said trolley pole into position where said current collector may engage the trolley wire upon the raising of said trolley pole including a casing secured to the underside of said socket, a fluid rotor rotatably mounted within said casing, said casing having an inner cylindrical wall spaced from the outer periphery of said rotor, a member extending from said wall to said rotor and forming a barrier between said wall and said rotor, a vane on said rotor slidably engaging said wall and forming a movable barrier between said rotor and wall, and fluid passageways on each side of said member to permit the admission of fluid under pressure to either side of said rotor to cause fluid engaging one side or the other of said vane to turn said rotor in one direction or another, and an operative connection between said rotor and said support member, to laterally move said trolley pole upon pivotal movement of said rotor.

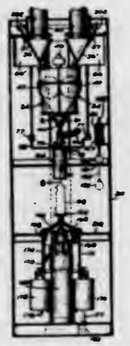
2,437,214
LEHR FEEDER
Albert F. Tremblay, Toledo, Ohio, assignor to Kent-Owens Machine Company, Toledo, Ohio, a corporation of Ohio
Application May 24, 1943, Serial No. 488,162
13 Claims. (Cl. 198—31)



9. Apparatus for annealing glass comprising a lehr, a lehr conveyor, a carrying-in conveyor carrying glassware transversely of the lehr at one end thereof and spaced from the lehr conveyor, a platform between and approximately on a level with the ware-supporting surfaces of the carry-

ing-in conveyor and the lehr conveyor, means to give the platform a vibratory movement of translation to move ware thereon towards and onto the lehr conveyor and means to push the ware from the carrying-in conveyor to the vibrating platform, said pushing means comprising a

wiper and means to reciprocate the wiper longitudinally of the carrying-in conveyor, said last named means being geared to move the wiper with the conveyor at the same speed as the conveyor and to move it in the opposite direction more slowly.

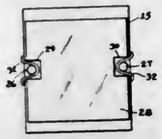


2,437,215
FOOD LOCKER
Harold E. Wheeler, Chicago, and David A. Forberg, Des Plaines, Ill.
Application February 26, 1945, Serial No. 579,854
4 Claims. (Cl. 62—102)

1. A food storage locker embodying a cabinet having an opening in a wall thereof, a closure for said opening, a food locker in said cabinet having its front face spaced a predetermined distance from the cabinet wall at the opening, said locker having its other faces spaced from the other walls of the cabinet, and means for circulating cold air through said spaces and across the face of the locker.

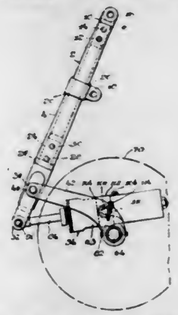
2,437,216
APPARATUS FOR MIXING DRY AND LIQUID MATERIALS AND LOADING INTO CONTAINERS
Jack P. Wilson, Ardmore, Herbert T. Lewis, Jr., Philadelphia, and Donald C. Glassford, Merion Station, Pa., assignors to Proctor & Schwartz, Inc., Philadelphia, Pa., a corporation of Pennsylvania
Application March 15, 1944, Serial No. 526,546
13 Claims. (Cl. 86—31)

1. Apparatus for delivering material into and packing it in an open-mouthed receptacle moving axially while being filled with said material, said apparatus comprising a mixing head disposed outside the mouth of said receptacle, an elongated filling tube extending from said head into said receptacle through the open mouth thereof with a remote external open end of said tube initially disposed adjacent but spaced from the bottom of the receptacle, a jet for gaseous pressurized fluid axially aligned with and spaced axially from the opposite internal open end of said tube located within said head for driving



material through and out of said remote open end of said tube, means for feeding a loose dry ingredient of said material into said head circumferentially or said jet to bring said dry ingredient under the driving influence of said pressurized fluid, and means within said head for injecting a plurality of streams of a wet ingredient radially into said dry ingredient prior to the entrance thereof into the internal open end of said tube under the driving influence of said pressurized fluid.

2,437,217
BRASSIÈRE
Abraham Zwiebelson, Mount Vernon, N. Y.
Application March 28, 1946, Serial No. 657,817
2 Claims. (Cl. 2—42)

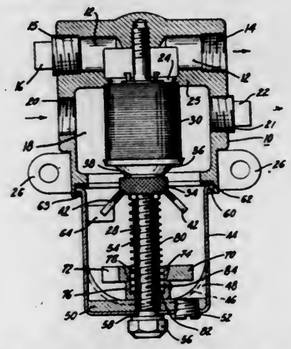


1. A brassière comprising a relatively inelastic front panel and two side panels, said front panel having bust pockets along its upper portion and being affixed to the side panels along substantially vertical lines, a cut-out formed in each of said side panels at the edge of said panel which is affixed to the front panel, said cut-out being spaced from the top and bottom edges of said side panels and from their free side edges and disposed below the level of the bust pockets, and an elastic insert set into each of said cut-outs, said inserts being attached to the front panel along said vertical lines and being attached to said side panels along the edges of the cut-outs.

2,437,218
METHOD AND MEANS FOR MOUNTING PIEZO CRYSTAL PLATES
Henry M. Bach, Woodmere, N. Y., assignor to Premier Crystal Laboratories, Incorporated, New York, N. Y.
Application January 28, 1946, Serial No. 643,921
10 Claims. (Cl. 171—327)

1. A piezo-electric crystal unit comprising a pair of electrodes, a piezo crystal positioned between said electrodes, said crystal having indentations in its edges, and means carried by said electrodes loosely engaging said indentations.

2,437,219
SHOCK STRUT
Fred E. Bachman, Chicago, Ill., assignor to American Steel Foundries, Chicago, Ill., a corporation of New Jersey
Application August 5, 1944, Serial No. 548,155
17 Claims. (Cl. 244—104)

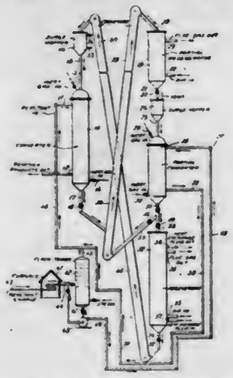


1. In a landing gear for aircraft, the combination of a strut having one end adapted for connection to the aircraft, a wheel, a pair of spaced parallel levers extending between said strut and said wheel and pivotally connected to said strut adjacent the other end thereof and to said wheel, a shock absorber device comprising two relatively movable members and means for yieldingly resisting movement therebetween, one of said members being positioned between said levers and the other of said members being pivotally connected to said second-mentioned end of said strut below the pivotal connection of said levers to said strut, and trunnion means for pivotally connecting said one member between and intermediate the ends of said levers to said levers.

2,437,220
ALUMINUM CONNECTION PARTS TREATED WITH CONCENTRATED NITRIC ACID
Wilhelm Friedrich Bonwitt, Mount Vernon, N. Y., assignor to Burndy Engineering Company, Inc., a corporation of New York
No Drawing. Application June 26, 1943, Serial No. 492,416
3 Claims. (Cl. 174—126)

2. A connection for transmitting electric current therethrough said connector being made of metal contacting parts at least one of which is aluminum, said aluminum part having a good conducting surface thereon obtained by treating it with concentrated nitric acid which is immediately air dried only.

2,437,221
SEDIMENT TRAP FOR FILTERS PROVIDED WITH MAGNETIC MEANS
Parker G. Cox and Hans Albert Hansen, Detroit, Mich., assignors to Bendix Aviation Corporation, South Bend, Ind., a corporation of Delaware
Application November 18, 1943, Serial No. 510,736
7 Claims. (Cl. 210—165)



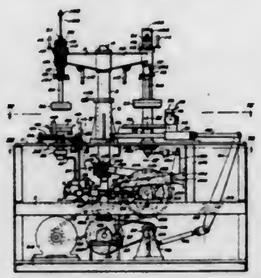
1. In a magnetic filter for fluids: a head having an inlet and an outlet; an edge type filter element interposed between the inlet and outlet; a bolt received through the filter element and having one end secured to the head; means for retaining the filter element in position comprising a nut and retaining cup rotatably secured thereto and interposed between said nut and the filter element; a plurality of pins fixed to the nut and extending outwardly thereof; a bowl received on the bolt and secured to the head beneath the filter element, there being a fluid passage connecting the inlet and the interior of the bowl; a stop member fixed to the interior of the bowl and positioned in the path of the pins when the nut is in its element retaining position; an imperforated tube extending upwardly from the bottom of the bowl and disposed about the bolt, said tube having its upper end disposed adjacent the plane of the top of the bowl; a magnet; a support for the magnet, received on the tube and positioned adjacent the bottom of the bowl, said support being of non-magnetic material and supporting the magnet in spaced relationship relative to the bottom of said bowl; an opening in the support extending from the upper end thereof, the interior walls of said opening being in spaced relation to the tube; a spring about the tube, extending into the opening in the support and reacting between said support and the nut to retain the support and magnet in position adjacent the bottom of the bowl.

2,437,222
HYDROCARBON CONVERSION PROCESS
John A. Crowley, Jr., New York, and Oswald G. Hayes, Manhasset, N. Y., assignors to Socony-Vacuum Oil Company, Incorporated, New York, N. Y., a corporation of New York
Application April 18, 1946, Serial No. 662,944
11 Claims. (Cl. 196—49)

1. The process for conversion of high boiling petroleum fractions to valuable lower boiling

products which comprises: introducing high boiling liquid petroleum fractions into a confined, elongated zone into contact with a stream of hot contaminant bearing contact mass material particles introduced to said zone at a temperature sufficiently high to supply the heat required for conversion of said liquid petroleum fraction to partially converted gaseous hydrocarbons, withdrawing said gaseous hydrocarbons from said zone and passing them into an elongated, confined conversion zone into contact with a stream of regenerated contact material particles introduced into said zone at a temperature suitable to support the completion of the conversion of said gaseous hydrocarbons to valuable lower boiling hydrocarbon products, withdrawing gaseous conversion products from said conversion zone and withdrawing spent contaminant bearing contact material therefrom, passing said spent contact material through a confined partial regeneration zone, passing a combustion supporting gas through said partial regeneration zone in contact

with said contact material to effect only the partial burning off of contaminant deposit therefrom and to cause said contact material to be heated to a suitable temperature which is below the heat damaging temperature for said contact material, withdrawing hot partially regenerated contact material from said partial regeneration zone and passing it through said first named confined zone to contact said high boiling liquid hydrocarbons as aforesaid, withdrawing spent contaminant bearing contact material from said first named zone and passing it through an elongated, confined regeneration zone, passing a combustion supporting gas through said regeneration zone to burn off substantially all of said contaminant from said contact material while controlling the temperature of said contact material below a heat damaging level, withdrawing regenerated contact material from said regeneration zone and passing it to said conversion zone as said stream of regenerated contact material introduced thereinto.

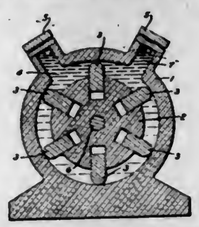


2,437,223
SPORTSMAN'S COAT
Claude H. Dutrow, Frederick, Md.
Application December 13, 1945, Serial No. 634,638
7 Claims. (Cl. 2—94)

3. In a sportsman's coat, a back and shoulder portion, a flexible waterproof sheet of material having a width substantially conforming with the width of the back portion of the coat and connected with the lower rear edge of the back portion of the coat and pendently supportable in a hanging position substantially coplanar with the back portion of the coat, said flexible waterproof sheet of material being foldable adjacent the interior of the back portion of the coat or alternately being foldable adjacent the exterior of the back portion of the coat, fastening means secured to both the inside and outside of the back portion of the coat and coacting means carried by said

flexible waterproof sheet of material and detachably engageable with said fastening means for maintaining said sheet of material either inside or outside of the coat, the surface of said flexible waterproof sheet of material that is exposed at the back portion of the coat being optically treated to establish a contrasting color signal distinguishing from the material of the coat and the environment in which it is normally used.

2,437,224
DECORATING APPARATUS
Walter H. Emerson, East Liverpool, Ohio; Elizabeth King Emerson, executrix of said Walter H. Emerson, deceased, assignor to The Homer Laughlin China Company, Newell, W. Va., a corporation of Delaware
Application May 27, 1943, Serial No. 488,651
16 Claims. (Cl. 101—41)

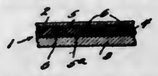


1. A potteryware decorating machine comprising a support for ware being decorated, a decorating stamp spaced from the support, means for centering ware on said support relative to the stamp, means for holding said ware in centering position, means for releasing said centering means from the ware as soon as the ware becomes held by said holding means, and means for effecting relative movement between said support and stamp to stamp decoration on the ware.

6. A potteryware decorating machine comprising a vacuum chuck for supporting ware being decorated, a decorating stamp above the chuck, a vertically reciprocable support for the stamp, means for centering ware on the chuck,

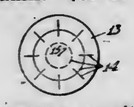
means for inking the stamp, and means actuated by said support as it is lowered for reducing the air pressure between the chuck and centered ware resting thereon.

2,437,225
ELECTRIC CURRENT INTERRUPTER
Stuart O. Fiedler and Johan Bjorksten, Chicago, Ill.; said Fiedler assignor to Bjorksten Research Laboratories, Inc., Chicago, Ill.
Application October 27, 1945, Serial No. 625,050
6 Claims. (Cl. 200—32)



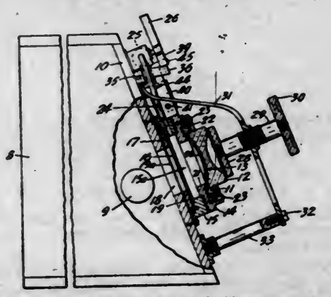
1. A current interrupting device comprising a rotor, a stator, said rotor and stator being of electrically insulating material and separated by an interspace filled with liquid metal, means for connecting said liquid metal with at least two outside electrodes, vanes slidably attached to the stator so as to form a tight fit against the rotor interrupting the electrical continuity of the said liquid metal and non-continuous indentations in the said rotor.

2,437,226
SMOKER'S STAND
Louis Fischer, Plainfield, N. J., assignor to Fischer Casting Company, Plainfield, N. J., a copartnership
Application April 1, 1946, Serial No. 658,672
3 Claims. (Cl. 232—1)



1. A smoker's stand comprising a base, a tubular standard rising therefrom, a platform rigidly affixed about the upper end of said standard, a centrally perforated ash tray removably resting ing upon said platform, said ash tray having a frusto-conical face for gravity discharge of waste through the central aperture thereof, means rigid and concentric with the ash tray substantially engaging the inner wall of the tubular standard at the upper part thereof for centering said ash tray and preventing lateral movement thereof, said means being formed as a jar holder for removably maintaining an ash intercepting jar suspended from said ash tray.

2,437,227
CUSHIONED SHOE SOLE
Manville Hall, Akron, Ohio
Application March 5, 1947, Serial No. 732,562
1 Claim. (Cl. 36—30)



The combination with a shoe having an inner sole and an outer sole, of a cushioning layer interposed between the inner and outer soles, said cushioning layer comprising a layer of sponge rubber, a plurality of coil springs molded within and held against substantial side slip by said sponge rubber, said coil springs being more resistant to compression than said sponge rubber, and facing sheets of hard rubber molded to the top and bottom of said layer of sponge rubber.

2,437,228
RETICLE
Norman B. Mears, West St. Paul, Minn., and Harvey T. Holsapple, New Rochelle, N. Y., assignors to Buckbee-Mears Company, St. Paul, Minn., a corporation of Minnesota
Original application August 5, 1943, Serial No. 497,486. Divided and this application February 15, 1944, Serial No. 522,452. In Canada October 13, 1943
6 Claims. (Cl. 33—51)

1. A reticle comprising, a unitary body of metal formed with fine, sharp, elongated perforations not exceeding .01 inch in width, defining a light-pervious design on an opaque field, the thickness of said body over the area of said design not exceeding .02 inch and selected perforations being separated by minute reinforcing filaments of metal, the filaments being integral with the body.

2,437,229
PHOTOPRINTING APPARATUS
Norman B. Mears, West St. Paul, Minn., assignor to Buckbee-Mears Company, St. Paul, Minn., a corporation of Minnesota
Application November 5, 1945, Serial No. 626,737
4 Claims. (Cl. 95—76)

1. Apparatus for photo-printing on a light-sensitized, non-planar surface of a blank comprising, a source of light, a holder for the blank, a manually operable backing member for securing the blank in said holder, said member being movable to an inoperative position to permit the removal of the blank, a chamber having a trans-

parent wall allowing the passage of light from said source to the coated surface of the blank in said holder, said wall being shaped to conform to said surface and carrying the image to be reproduced on the blank, means including a valve for supplying gas under pressure above atmospheric to said chamber to forcibly press said wall against the non-planar surface of the blank and latch mechanism interposed between said valve and backing member adapted to retain said valve in closed position when the backing member is in inoperative position.

2,437,230

RECOVERY OF OLEFINIC HYDROCARBONS

Rupert C. Morris, Berkeley, and Theodore W. Evans, Oakland, Calif., assignors to Shell Development Company, San Francisco, Calif., a corporation of Delaware

No Drawing. Application July 1, 1942, Serial No. 449,326
11 Claims. (Cl. 183—115)

4. A process for the separation of a diolefin from a gaseous hydrocarbon mixture containing the diolefin and a more saturated hydrocarbon containing the same number of carbon atoms which comprises contacting the gaseous hydrocarbon mixture with a liquid solvent which consists of water and a solvent of the group consisting of acetonitrile, propionitrile, and lactonitrile, and contains from 10 mol per cent to 68 mol per cent of water, to selectively dissolve the diolefin, and separating the residual gas from the liquid solution of the diolefin.

2,437,231

COPOLYMERS OF STYRENE AND A BETA-CYANOACRYLATE

David T. Mowry, Dayton, Ohio, assignor to Monsanto Chemical Company, a corporation of Delaware

No Drawing. Application July 10, 1943, Serial No. 494,243
7 Claims. (Cl. 260—86)

1. The process for producing resinous products comprising polymerizing a mixture containing styrene together with from 1% to 50% by weight of said mixture of a compound having the general structure:

$$\begin{matrix} R.C{:}CX.COOY \\ | \\ CN \end{matrix}$$

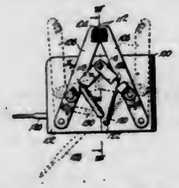
where R and X together are selected from the group consisting of: H and H, H and Cl, H and CH_3 and CH_3 and H, and Y is a member of the class consisting of H and saturated hydrocarbon radicals of from 1 to 5 carbon atoms.

2,437,232

STABILIZATION OF POLYESTERS FROM DIHYDRIC ALCOHOLS AND BOTH SATURATED AND UNSATURATED DICARBOXYLIC ACIDS

David A. Rothrock, Jr., and Richard F. Conyne, Philadelphia, Pa., assignors to The Resinous Products & Chemical Company, a corporation of Delaware

No Drawing. Original application October 15, 1943, Serial No. 506,432. Divided and this application November 21, 1945, Serial No. 630,128
14 Claims. (Cl. 260—75)



1. In the stabilization against degradation in molecular weight of a polyester consisting of chains from a saturated dihydric alcohol with a carbon chain of two to twelve carbon atoms and alcoholic hydroxyl groups as the sole reactive functional groups thereof, chains from a saturated dicarboxylic acid with a chain of four to fourteen carbon atoms and with carboxyl groups as the sole reactive functional groups thereof, and chains from an olefinically unsaturated aliphatic dicarboxylic acid with a chain of four to six carbon atoms and with carboxyl groups and an olefinic linkage as the sole functional groups thereof, the number of chains from said unsaturated acid being less than the number of chains from said saturated acid, the steps which comprise reacting by condensing together under the influence of heat said alcohol and said acids with the saturated acid in molecular excess of the unsaturated acid until polyesterification has taken place, then reacting under the influence of heat as the sole reactants the resulting polyester and from 0.0015 to 0.075 gram mole per kilogram of said polyester of a phosphorus compound from the group consisting of alkyl phosphite esters in which the alkyl group has one to eight carbon atoms and phenyl and alkylphenyl phosphite esters wherein the alkyl substituent is joined to the phenyl group and contains one to eight carbon atoms.

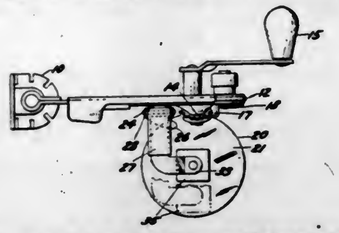
2,437,233

BAG HOLDER

Travis Otis Smith, Kansas City, Mo., assignor, by mesne assignments, to Arbee Products Company, Kansas City, Kans., a firm composed of David M. Larenz and Bernhard W. Alden

Application June 18, 1945. Serial No. 600,183
4 Claims. (Cl. 248—101)

1. A bag holder of the kind specified comprising a frame; a pair of substantially parallel, U-shaped bag supporting jaws pivotally mounted on the frame for movement to and from a closed position where the bights of the jaws are in juxtaposition and the bag is held shut; a manually manipulable operating member shiftably carried by the frame for actuating the jaws to and from the closed position, said operating member being held at one end of its path of travel where the jaws are closed by the action of gravity; a pair of links interconnecting the jaws to insure equalized movement about the respective axes of the jaws, said operating member being joined to the links whereby movement of the said member is imparted to the jaws through the said links; and a pin for pivotally joining said links, said member being U-shaped and having a slot in one leg thereof through which said pin projects for sliding movement therein.



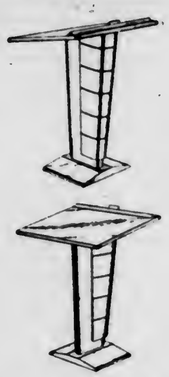
2,437,234

MAGNETIC RETAINING MEANS FOR CAN LIDS AND THE LIKE

John Webb, Toledo, Ohio, assignor, by mesne assignments, to R. H. Webb and Associates, Inc., Toledo, Ohio, a corporation of Ohio

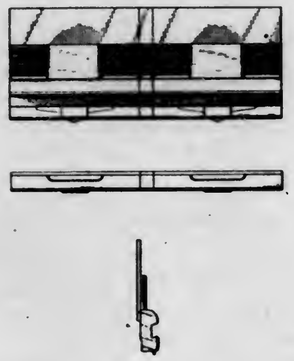
Application March 30, 1946, Serial No. 658,386
1 Claim. (Cl. 30—124)

In combination with a can opening mechanism including a bracket; means carried by said bracket whereby a can and a can turning and cutting mechanism may be detachably connected together; of an arm comprising two slidably connected parts; a hinge connecting one of said



parts to said bracket, said hinge being laterally spaced from and horizontally offset with respect to said cutter; said arm extending laterally from said bracket and said hinge arranged whereby said arm may be swung to a position against the side of the bracket and to a position extending outwardly therefrom; one part of said arm attached to said hinge and the other part of said arm being laterally extended into alignment with the cutter; and a permanent magnet for retaining the cut out portion of the can; said magnet movably and rotatively pivoted on the extension of said second-mentioned arm part, said magnet having north and south poles, the pivotal support for said magnet being between said poles, said magnet lying flatwise against the top of the can and arranged to produce a relatively strong magnetic field confined to the can area adjacent said magnet, one of said arm parts being substantially impermeable magnetically to prevent dissipation of said magnet, the two part arm being operative to assume varying positions in order to tend to centralize the magnet with respect to the can upon rotary movement during the cutting action.

DESIGNS



MARCH 2, 1948

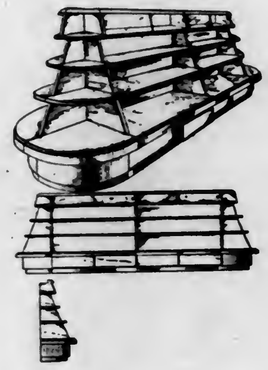
148,838
DESIGN FOR A SCORE TABLE
Robert I. Anderson, Grand Haven, and Bert Hoeker, Muskegon, Mich., assignors to The Brunswick-Balke-Collender Company, Chicago, Ill., a corporation of Delaware
Application March 13, 1946, Serial No. 127,452
Term of patent 14 years
(Cl. D34—5)

The ornamental design for a score table, as shown.

148,839
DESIGN FOR A MASKING UNIT FOR BOWLING ALLEY PIN SETTERS OR THE LIKE
Robert I. Anderson, Grand Haven, and Bert Hoeker, Muskegon, Mich., assignors to The Brunswick-Balke-Collender Company, Chicago, Ill., a corporation of Delaware
Application March 13, 1946, Serial No. 127,456
Term of patent 14 years
(Cl. D34—5)

The ornamental design for a masking unit for bowling alley pin setters or the like, as shown.

148,840
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Nicholas Barbieri, Providence, R. I., assignor to Uncas Manufacturing Company, a corporation of Rhode Island
Application August 9, 1946, Serial No. 132,371
Term of patent 14 years
(Cl. D45—19)

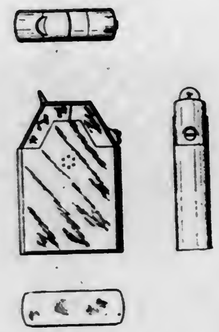


The ornamental design for a brooch or similar article, substantially as shown.

148,841
DESIGN FOR A CAKE ORNAMENT
Leon D. Bush, Chicago, Ill.
Application July 11, 1947, Serial No. 140,225
Term of patent 14 years
(Cl. D29—1)

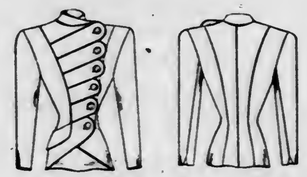
The ornamental design for a cake ornament, substantially as shown.

148,842
DESIGN FOR A SHOWCASE
Gordon S. Cushman, New York, N. Y., assignor to Cushman's Sons, Inc., New York, N. Y., a corporation of New York
Application October 21, 1946, Serial No. 134,129
Term of patent 14 years
(Cl. D80—11)



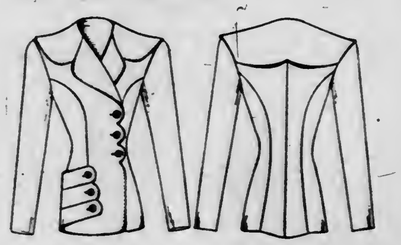
The ornamental design for a showcase, substantially as shown.

148,843
DESIGN FOR A LIGHTER
Alfredo W. Doux, New York, N. Y., assignor to Snap-Lite Corporation, New York, N. Y., a corporation of New York
Application December 29, 1945, Serial No. 125,206
Term of patent 3½ years
(Cl. D48—27)



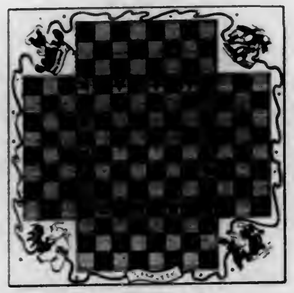
The ornamental design for a lighter, substantially as shown.

148,844
DESIGN FOR A LIGHTER
Alfredo W. Doux, New York, N. Y., assignor to Snap-Lite Corporation, New York, N. Y., a corporation of New York
Application December 29, 1945, Serial No. 125,207
Term of patent 3½ years
(Cl. D48—27)



The ornamental design for a lighter, substantially as shown.

148,845
DESIGN FOR A JACKET
Nathan Finkelstein, New York, N. Y.
Application July 30, 1947, Serial No. 140,628
Term of patent 3½ years
(Cl. D3—4)



The ornamental design for a jacket, substantially as shown.

148,846
DESIGN FOR A JACKET
Nathan Finkelstein, New York, N. Y.
Application July 30, 1947, Serial No. 140,629
Term of patent 3½ years
(Cl. D3—4)

The ornamental design for a jacket, substantially as shown.

148,847
DESIGN FOR A GAME BOARD
Harvey M. Fisher and Milton A. Barnett, St. Louis, Mo.
Application November 6, 1946, Serial No. 134,558
Term of patent 3½ years
(Cl. D34—5)

The ornamental design for a game board, as shown and described.

148,848
DESIGN FOR A SCOOTER
Zvi Gezari, New York, N. Y.
Application October 19, 1946, Serial No. 134,082
Term of patent 7 years
(Cl. D34—15)

The ornamental design for a scooter, substantially as shown and described.

148,849
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Beatrice Glass, New York, N. Y.
Application February 18, 1947, Serial No. 136,976
Term of patent 3½ years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

148,850
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Beatrice Glass, New York, N. Y.
Application February 18, 1947, Serial No. 136,977
Term of patent 3½ years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

148,851
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Beatrice Glass, New York, N. Y.
Application February 18, 1947, Serial No. 136,978
Term of patent 3½ years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

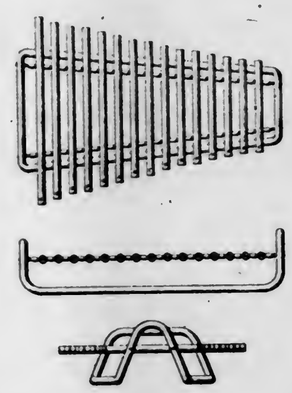
148,852
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Beatrice Glass, New York, N. Y.
Application February 18, 1947, Serial No. 136,979
Term of patent 3½ years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

148,853
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Beatrice Glass, New York, N. Y.
Application February 18, 1947, Serial No. 136,981
Term of patent 3½ years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

148,854
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Beatrice Glass, New York, N. Y.
Application February 20, 1947, Serial No. 137,043
Term of patent 3½ years
(Cl. D45—19)

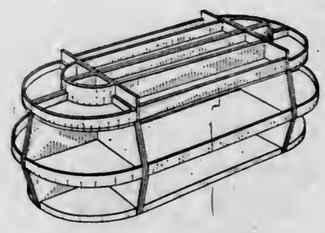


The ornamental design for a brooch or similar article, substantially as shown.

148,855
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Beatrice Glass, New York, N. Y.
Application February 20, 1947, Serial No. 137,046
Term of patent 3½ years
(Cl. D45—19)

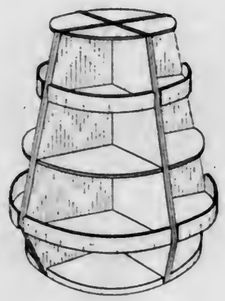
The ornamental design for a brooch or similar article, substantially as shown.

148,856
DESIGN FOR A XYLOPHONE
Ell H. Gruber, Malvern, Pa.
Application August 29, 1946, Serial No. 132,943
Term of patent 14 years
(Cl. D56—1)



The ornamental design for a xylophone, as shown.

148,857
DESIGN FOR A DRESS
Bernard Hurwitz, New York, N. Y.
Application September 8, 1947, Serial No. 141,262
Term of patent 3½ years
(Cl. D3—26)

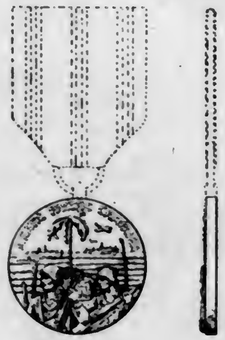


The ornamental design for a dress, substantially as shown.

148,858
DESIGN FOR A SECTIONAL DISPLAY TABLE
Neel S. Irwin, Weaverville, N. C.
Application July 26, 1946, Serial No. 131,982
Term of patent 14 years
(Cl. D80—9)

The ornamental design for a sectional display table, as shown.

148,859
DESIGN FOR A SECTIONAL DISPLAY STAND UNIT
Neel S. Irwin, Weaverville, N. C.
Application July 26, 1946, Serial No. 131,984
Term of patent 14 years
(Cl. D80—9)



The ornamental design for a sectional display stand unit, as shown.

148,860
DESIGN FOR A MEDALLION OR SIMILAR ARTICLE
Thomas H. Jones, Washington, D. C., assignor to the United States of America, as represented by the Secretary of War
Application September 23, 1947, Serial No. 141,552
Term of patent 14 years
(Cl. D29—19)

The ornamental design for a medallion or similar article, as shown and described.

148,861
DESIGN FOR A MEDAL OR SIMILAR ARTICLE
Thomas H. Jones, Washington, D. C., assignor to the United States of America, as represented by the Secretary of War
Application September 23, 1947, Serial No. 141,553
Term of patent 14 years
(Cl. D29—19)

The ornamental design for a medal or similar article, as shown and described.

148,862
DESIGN FOR A SALT SHAKER
Vincent A. Kasin, Hollywood, Calif.
Application February 18, 1947, Serial No. 137,000
Term of patent 14 years
(Cl. D44—22)

The ornamental design for a salt shaker, substantially as shown.

148,863
DESIGN FOR A NECKLACE OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application February 5, 1947, Serial No. 136,682
Term of patent 7 years
(Cl. D45—16)

The ornamental design for a necklace or similar article, substantially as shown.

148,864
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application February 5, 1947, Serial No. 136,684
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

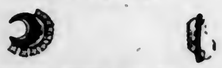
148,865
DESIGN FOR A BRACELET OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application February 5, 1947, Serial No. 136,686
Term of patent 7 years
(Cl. D45—4)

The ornamental design for a bracelet or similar article, substantially as shown.

148,866
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application February 5, 1947, Serial No. 136,687
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

148,867
DESIGN FOR A BRACELET OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application February 5, 1947, Serial No. 136,689
Term of patent 7 years
(Cl. D45—4)



The ornamental design for a bracelet or similar article, substantially as shown.

148,868
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application February 5, 1947, Serial No. 136,690
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

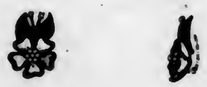
148,869
DESIGN FOR AN EARRING OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application February 6, 1947, Serial No. 136,736
Term of patent 7 years
(Cl. D45—9)

The ornamental design for an earring or similar article, substantially as shown.

148,870
DESIGN FOR AN EARRING OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application February 6, 1947, Serial No. 136,738
Term of patent 7 years
(Cl. D45—9)

The ornamental design for an earring or similar article, substantially as shown.

148,871
DESIGN FOR AN EARRING OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application February 6, 1947, Serial No. 136,739
Term of patent 7 years
(Cl. D45—9)



The ornamental design for an earring or similar article, substantially as shown.

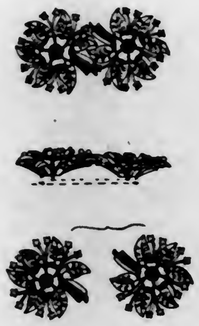
148,872
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application February 6, 1947, Serial No. 136,742
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

148,873
DESIGN FOR AN EARRING OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application February 6, 1947, Serial No. 136,744
Term of patent 7 years
(Cl. D45—9)

The ornamental design for an earring or similar article, substantially as shown.

148,874
DESIGN FOR AN EARRING OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application February 6, 1947, Serial No. 136,746
Term of patent 7 years
(Cl. D45—9)



The ornamental design for an earring or similar article, substantially as shown.

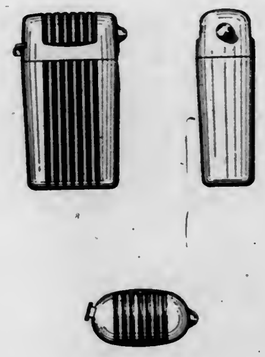
148,875
DESIGN FOR A SEPARABLE BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application February 11, 1947, Serial No. 136,838
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a separable brooch or similar article, substantially as shown.

148,876
DESIGN FOR A SEPARABLE BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application February 18, 1947, Serial No. 136,989
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a separable brooch or similar article, substantially as shown.

148,877
DESIGN FOR A SEPARABLE BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application March 13, 1947, Serial No. 137,571
Term of patent 7 years
(Cl. D45—19)



The ornamental design for a separable brooch or similar article, substantially as shown.

148,878
DESIGN FOR A NECKLACE OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application March 13, 1947, Serial No. 137,575
Term of patent 7 years
(Cl. D45—16)

The ornamental design for a necklace or similar article, substantially as shown.

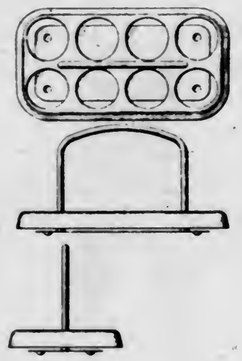
148,879
DESIGN FOR AN OVAL POCKET FLASHLIGHT
Miles J. Kelly, Waterbury, Conn., assignor to Cresaie Incorporated, Waterbury, Conn., a corporation of Connecticut
Application May 7, 1946, Serial No. 129,401
Term of patent 14 years
(Cl. D48—24)

The ornamental design for an oval pocket flashlight, as shown.

148,880
DESIGN FOR A BOTTLE
Benjamin Lewis, New York, N. Y., assignor to Lionel G. Rothschild, Dallas, Tex.
Application July 12, 1946, Serial No. 131,525
Term of patent 14 years
(Cl. D58—10)

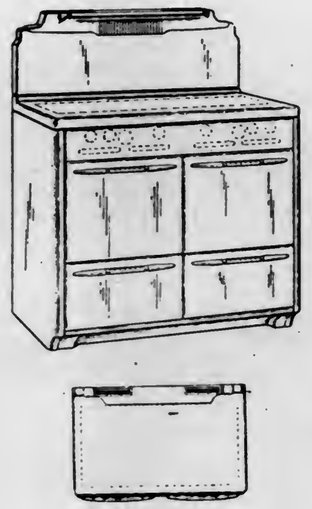
The ornamental design for a bottle, as shown.

148,881
DESIGN FOR A SHRINE
John C. Lown, Toronto, Ontario, Canada, assignor, by mesne assignments, to Russell Adam Brown, Toronto, Ontario, Canada
Application May 20, 1947, Serial No. 139,146
Term of patent 3½ years
(Cl. D39—23)



The ornamental design for a shrine, as shown and described.

148,882
DESIGN FOR A MEDAL OR SIMILAR ARTICLE OF MANUFACTURE
John F. Malley, Boston, Mass., and Lucien Ribera, New York, N. Y., assignors to Benevolent and Protective Order of Elks, United States of America, Chicago, Ill., a corporation of the District of Columbia
Application May 20, 1946, Serial No. 129,926
Term of patent 14 years
(Cl. D29—19)



The ornamental design for a medal or similar article of manufacture, as shown.

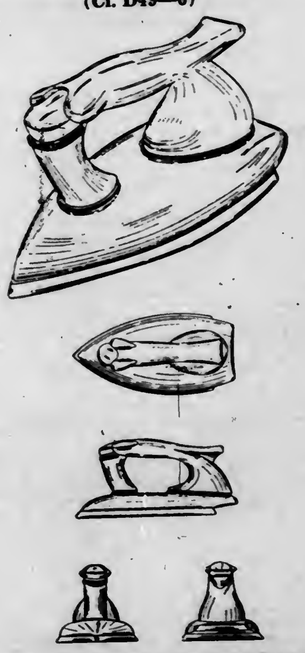
148,883
DESIGN FOR A SERVING TRAY FOR GLASSES OR THE LIKE
William C. Panzer, Chicago, Ill.
Application May 29, 1946, Serial No. 130,230
Term of patent 14 years
(Cl. D44—10)

The ornamental design for a serving tray for glasses or the like, substantially as shown.

148,884
DESIGN FOR A COOKING RANGE
Elmer D. Pellegrin, Woodstock, Ill.
Application November 8, 1946, Serial No. 134,609
Term of patent 7 years
(Cl. D81—4)

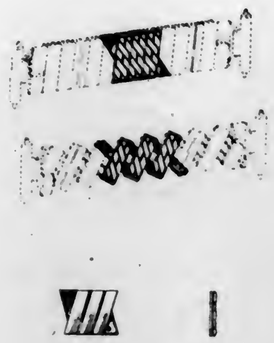
The ornamental design for a cooking range, substantially as shown and described.

148,885
DESIGN FOR AN EARRING OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application January 29, 1947, Serial No. 136,500
Term of patent 7 years
(Cl. D45—9)



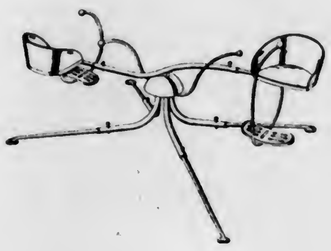
The ornamental design for an earring or similar article, substantially as shown.

148,886
DESIGN FOR A LAMP BASE
Jordan A. Post, Detroit, Mich.
Application May 3, 1946, Serial No. 129,239
Term of patent 3½ years
(Cl. D48—20)



The ornamental design for a lamp base, as shown.

148,887
DESIGN FOR AN ELECTRIC IRON
Jean O. Reinecke, Oak Park, Ill., assignor to McGraw Electric Company, Elgin, Ill., a corporation of Delaware
Application June 13, 1946, Serial No. 130,671
Term of patent 14 years
(Cl. D49—6)

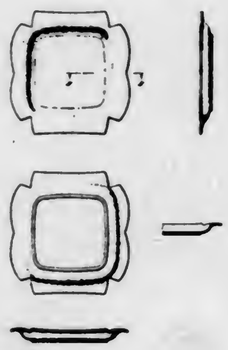


The ornamental design for an electric iron, substantially as shown and described.

148,888
DESIGN FOR AN EXPANSIBLE BRACELET
Franklin Stewart Rice, Cranston, R. I., assignor to Marvel Jewelry Mfg. Company, Providence, R. I., a corporation of Rhode Island
Application February 12, 1947, Serial No. 136,859
Term of patent 7 years
(Cl. D45—4)

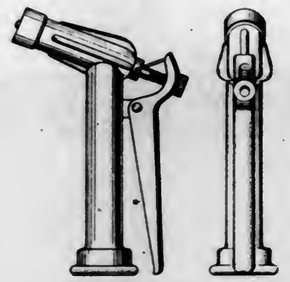
The ornamental design for an expansible bracelet, as shown and described.

148,889
DESIGN FOR A MERRY-GO-ROUND
Harry Sebel, London, England
Application May 16, 1946, Serial No. 129,764
In Great Britain March 26, 1945
Term of patent 14 years
(Cl. D34—5)



The ornamental design for a merry-go-round, as shown.

148,890
DESIGN FOR A DRESS
John F. Strassner, New York, N. Y.
Application July 15, 1947, Serial No. 140,272
Term of patent 3½ years
(Cl. D3—26)

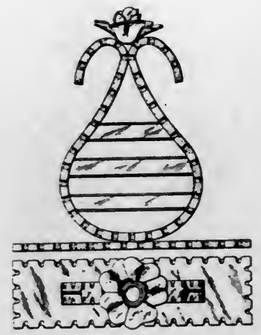


The ornamental design for a dress, substantially as shown.

148,891
DESIGN FOR A DISH
Alwin L. Suman, Sierra Madre, Calif.
Application October 12, 1946, Serial No. 133,906
Term of patent 3½ years
(Cl. D44—15)

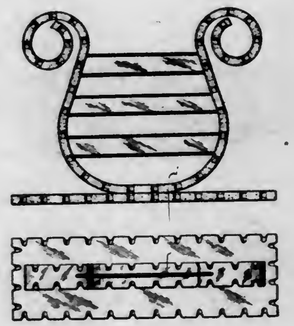
The ornamental design for a dish, substantially as shown.

148,892
DESIGN FOR A HOSE NOZZLE
Morris Swimmer, Pittsburgh, Pa.
Application April 16, 1946, Serial No. 128,626
Term of patent 14 years
(Cl. D91—1)



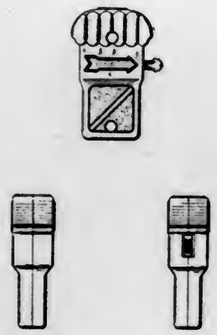
The ornamental design for a hose nozzle, as shown.

148,893
DESIGN FOR A PEDESTAL
Frank Tatar, Cincinnati, Ohio, assignor to Berwyn Lamp & Shade Manufacturing Co., Cincinnati, Ohio, a corporation of Ohio
Application April 24, 1947, Serial No. 138,579
Term of patent 3½ years
(Cl. D29—23)



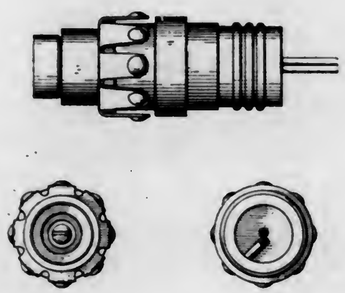
The ornamental design for a pedestal, as shown and described.

148,894
DESIGN FOR AN EARRING RACK
Portia L. Trenholm, Montgomery, Ala.
Application December 6, 1946, Serial No. 135,302
Term of patent 7 years
(Cl. D80—9)



The ornamental design for an earring rack, as shown.

148,895
DESIGN FOR AN EARRING RACK
Portia L. Trenholm, Montgomery, Ala.
Application December 6, 1946, Serial No. 135,303
Term of patent 7 years
(Cl. D80—9)

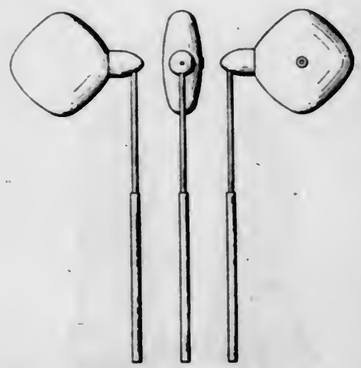


The ornamental design for an earring rack, as shown.

148,896
DESIGN FOR AN ELECTRIC PLUG
Solomon Turk, Brooklyn, N. Y.
Application November 29, 1946, Serial No. 135,175
Term of patent 7 years
(Cl. D26—1)

The ornamental design for an electric plug, as shown and described.

148,897
DESIGN FOR AN ELECTRICAL CONNECTION PLUG
Vincent S. Ward and Gordon K. Hurlbut, Binghamton, N. Y., assignors to B. M. C. Manufacturing Corp., Binghamton, N. Y., a corporation of New York
Application January 21, 1947, Serial No. 136,272
Term of patent 14 years
(Cl. D26—1)



The ornamental design for an electrical connection plug, substantially as shown.

148,898
DESIGN FOR A WALLPAPER BORDER OR SIMILAR ARTICLE
Ada Westrate, Chicago, Ill., assignor to The Meyercord Co., Chicago, Ill., a corporation of Illinois
Application April 4, 1946, Serial No. 128,255
Term of patent 3½ years
(Cl. D59—10)

The ornamental design for a wallpaper border or similar article, as shown.

148,899
DESIGN FOR A PORTABLE ATOMIZER
Henry Charles Yaeger, Ridgewood, N. J., assignor to Grand Products, Inc., New York, N. Y., a corporation of New York
Application May 29, 1946, Serial No. 130,206
Term of patent 3½ years
(Cl. D83—1)

The ornamental design for a portable atomizer, as shown.

148,900
DESIGN FOR A TEAPOT OR THE LIKE
Eva S. Zeisel, New York, N. Y., assignor to Castleton China, Incorporated, New York, N. Y., a corporation of New York
Application April 17, 1946, Serial No. 128,706
Term of patent 14 years
(Cl. D44—26)

The ornamental design for a teapot or the like, as shown.

608 O. G.—14

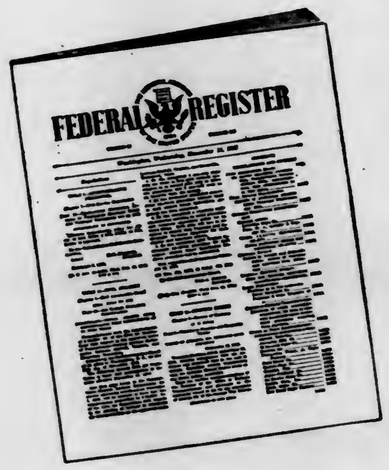
148,901
DESIGN FOR A COFFEEPOT OR THE LIKE
Eva S. Zeisel, New York, N. Y., assignor to Castleton China, Incorporated, New York, N. Y., a corporation of New York
Application April 17, 1946, Serial No. 128,707
Term of patent 14 years
(Cl. D44—26)

The ornamental design for a coffeepot or the like, as shown.

148,900
DESIGN FOR A TEAPOT OR THE LIKE
Eva S. Zeisel, New York, N. Y., assignor to Castleton China, Incorporated, New York, N. Y., a corporation of New York
Application April 17, 1946, Serial No. 128,706
Term of patent 14 years
(Cl. D44—26)

The ornamental design for a teapot or the like, as shown.

608 O. G.—14



148,901
DESIGN FOR A COFFEEPOT OR THE LIKE
Eva S. Zeisel, New York, N. Y., assignor to Castleton China, Incorporated, New York, N. Y., a corporation of New York
Application April 17, 1946, Serial No. 128,707
Term of patent 14 years
(Cl. D44—26)

The ornamental design for a coffeepot or the like, as shown.

Rouge and lipstick. R. Hudnut. 437,210, Mar. 9; Serial No. 518,888, published Dec. 9, 1947.
Size, Rosin. Hercules Powder Company. 437,205, Mar. 9; Serial No. 518,224, publication waived.
Tonic, Hair. Colgate-Palmolive-Peet Company. 437,289, Mar. 9; Serial No. 524,377, published Dec. 16, 1947.
Waterproofing liquid. Canvas Proofing & Striping Company. 240,055, renewed Mar. 20, 1948. O. G. Mar. 9.

CLASS 7

Rope and strands made of treated undrawn nylon. All American Aviation, Inc. 437,285, Mar. 9; Serial No. 524,098, published Dec. 9, 1947.

CLASS 8

Cigarette cases. Reno Wallet Company. 437,157, Mar. 9; Serial No. 512,610, published Dec. 16, 1947.
Cigarette paper. Peter J. Schweitzer, Inc. 310,447, Feb. 27, 1934. Republished Mar. 9.
Smokers' utility boxes. Midwest Manufacturing and Engineering Corp. 437,183, Mar. 9; Serial No. 515,891, published Dec. 16, 1947.

CLASS 11

Ink, Printing. Sigmund Ullman Company. 234,906, renewed Nov. 8, 1947. O. G. Mar. 9.
Ink, Writing. Parker Pen Company. 282,550, Apr. 21, 1931. Republished Mar. 9.
Inked ribbons and carbon paper. Key Ribbon and Carbon Company. 437,128–30, Mar. 9; Serial Nos. 506,755–7, published Dec. 16, 1947.
Inks and ink solvents, Stamping and printing. Kaumagraph Company. 437,300, Mar. 9; Serial No. 525,336, published Dec. 16, 1947.
Typewriter ribbons. Nelson-Eismann Company. 266,618, Jan. 28, 1930. Republished Mar. 9.

CLASS 12

Asbestos roof coatings and plastic roofing cements, Liquid. Panther Oil & Grease Mfg. Co. 437,195, Mar. 9; Serial No. 517,426, published Dec. 9, 1947.
Asphalt, Dry powdered. Presstite Engineering Company. 266,832, Feb. 4, 1930. Republished Mar. 9.
Asphalt type coating. Master Mechanics Co. 437,180, Mar. 9; Serial No. 514,969, published Nov. 4, 1947.
Board, Asbestos composition. Ambler Asbestos Shingle & Sheathing Company. 285,660, Aug. 4, 1931. Republished Mar. 9.
Board, composite board, construction board, etc., Fiber. Armstrong-Newport Company. 312,580, May 1, 1934. Republished Mar. 9.
Boards, composition boards, wall board, etc., Asbestos cement. Keasbey & Mattison Company. 324,720, May 28, 1935. Republished Mar. 9.
Bricks, blocks, slabs and reinforced units. Yxhults Stenhuggeri Aktiebolag. 437,093, Mar. 9; Serial No. 490,731, published Dec. 2, 1947.
Building blocks. Bloomington Limestone Company. 258,699, July 16, 1929. Republished Mar. 9.
Building materials, Non-metallic. Prebuilt Constructions Limited. 437,140, Mar. 9; Serial No. 507,842, published Nov. 4, 1947.
Cements, asbestos paper, asbestos shingles, etc., Asbestos. Keasbey & Mattison Company. 316,761, Sept. 4, 1934. Republished Mar. 9.
Composition board. W. H. Bordsorff. 437,119, Mar. 9; Serial No. 504,428, published Dec. 9, 1947.
Concrete, Refractory. Babcock & Wilcox Company. 437,188, Mar. 9; Serial No. 516,524, published Dec. 9, 1947.
Cork insulation, cork boards, and cork pipe covering. Mundet Cork Corporation. 437,244, Mar. 9; Serial No. 521,595, published Nov. 11, 1947.

Cork insulation, cork boards and pipe coverings. Mundet Cork Corporation. 437,243, Mar. 9; Serial No. 521,593, published Nov. 11, 1947.
Crossties, railroad switch ties, timbers, Railroad. T. J. Moss Tie Company. 262,756, Oct. 22, 1929. Republished Mar. 9.
Doors, Wooden hollow. Mengel Company. 437,098, Mar. 9; Serial No. 493,377, published Dec. 9, 1947.
Floors, wainscoting panels, ceilings, etc., Jointless. Eubdolithwerke A.-G. in Olten. 230,212, renewed July 19, 1947. O. G. Mar. 9.
Gates, Combination wood and iron bridge type. McJilton & Son. 437,261, Mar. 9; Serial No. 522,540, published Dec. 9, 1947.
Glass fibrous matted material. Vitron Corporation. 437,173, Mar. 9; Serial No. 513,917, published Dec. 9, 1947.
Hardeners and colors, Cement. Bradfield Building Products Co. 292,405, Mar. 15, 1932. Republished Mar. 9.
Heat insulation. Pal-O-Pak Insulation Co. 404,369, Nov. 23, 1943. Corrected. O. G. Mar. 9.
Insulation material. Eagle-Picher Company. 437,266, Mar. 9; Serial No. 522,820, published Dec. 9, 1947.
Insulation material, Heat and sound. Armstrong-Newport Company. 284,025, June 9, 1931. Republished Mar. 9.
Insulation products. Keasbey & Mattison Company. 309,466, Jan. 16, 1934. Republished Mar. 9.
Lath, Metal. Penn Metal Company. 255,434, Apr. 23, 1929. Republished Mar. 9.
Lathing, Metal. Penn Metal Company. 255,453–4, Apr. 23, 1929. Republished Mar. 9.
Laths, metal corners, metal corner beads, etc., Metal. Penn Metal Company. 306,321, Sept. 12, 1933. Republished Mar. 9.
Lumber, Laminated plywood. Tidewater Plywood Company. 437,234, Mar. 9; Serial No. 521,038, published Nov. 4, 1947.
Material, Heat insulating. Armstrong Cork & Insulation Company. 303,093, May 9, 1933. Republished Mar. 9.
Material in sheet form used as a covering in building construction, general construction and industry in general, Plastic-like. Rubber and Plastics Compound Co., Inc. 437,202, Mar. 9; Serial No. 518,043, published Dec. 2, 1947.
Material, Isolation. Armstrong Cork & Insulation Company. 288,655, Nov. 3, 1931. Republished Mar. 9.
Materials for use for articles for ornamenting, decorating, and building, Masons' and bricklayers'. J. M. Delicado. 437,148–9, Mar. 9; Serial Nos. 510,769–70, published Dec. 2, 1947.
Metal floors, corrugated metal sheets, laminated metal sheets, etc. H. H. Robertson Company. 437,083, Mar. 9; Serial No. 483,147, published Dec. 2, 1947.
Metal sheets protected by coating material, metal floors, corrugated metal sheets, etc. H. H. Robertson Company. 437,084, Mar. 9; Serial No. 483,151, published Dec. 2, 1947.
Metal units, Hollow sheet. Trussbilt Steel Doors, Inc. 294,095, May 17, 1932. Republished Mar. 9.
Panels of steel, and aluminum, Siding. Latisteel Corporation of California. 437,087, Mar. 9; Serial No. 487,049, published Dec. 2, 1947.
Patching and waterproofing material. Maintenance Engineering Company. 437,142, Mar. 9; Serial No. 508,484, published Dec. 2, 1947.
Piling, metal panels, metal frames, etc., Metal. Steelox Company. 320,405, Dec. 25, 1934. Republished Mar. 9.
Plastic and cement products. M. Merow. 437,222, Mar. 9; Serial No. 520,225, published Dec. 2, 1947.
Plastics with wood veneer, metal, glass, etc., Combinations of. William L. Marshall, Limited. 437,097, Mar. 9; Serial No. 492,330, published Dec. 9, 1947.
Posts, Adjustable. H. B. Augustine. 437,134, Mar. 9; Serial No. 507,181, published Dec. 9, 1947.
Refractory granular materials, refractory cements, and mortars, Mineral base. Basic Refractories, Inc. 437,085, Mar. 9; Serial No. 483,605, published Dec. 9, 1947.
Refractory materials. Basic Refractories, Inc. 437,253, Mar. 9; Serial No. 522,024, published Dec. 9, 1947.
Rock wool insulation; asphalt shingle type roofing and siding, Fibrous. Insultex Co. 437,152, Mar. 9; Serial No. 511,276, published Dec. 9, 1947.
Roofing, covering, roofing slate, etc., Fireproof. Asbestos Shingle, Slate & Sheathing Company. 275,250, Sept. 16, 1930. Republished Mar. 9.
Screens including frames, Window and door. Acme Screen Company, Inc. 437,185, Mar. 9; Serial No. 516,389, published Dec. 9, 1947.
Sheet metal ship lap siding. National Aluminum Products Co. 437,169, Mar. 9; Serial No. 513,677, published Dec. 9, 1947.
Shingle tiles and aluminum shingles, Aluminum insulated. Alumalux Company. 437,201, Mar. 9; Serial No. 517,947, published Dec. 2, 1947.
Shingles and lumber, Cedar. Community Builders, Inc. 437,217, Mar. 9; Serial No. 519,926, published Dec. 2, 1947.
Shingles, Mineral-surfaced asphalt-saturated. Bird & Son, inc. 437,107, Mar. 9; Serial No. 499,198, published Dec. 2, 1947.
Standards and poles, Metal street and highway. Union Metal Manufacturing Company. 437,091, Mar. 9; Serial No. 490,514, published Nov. 4, 1947.
Standards and poles, Metal street and highway. Union Metal Manufacturing Company. 437,092, Mar. 9; Serial No. 490,515, published Nov. 11, 1947.
Tile, clip boards, and cement and a combined wall tile, etc., Wall. Columbian Enameling & Stamping Co., Inc. 313,273, May 22, 1934. Republished Mar. 9, 1948.
Tile, Plastic wall. F. B. Hill, Jr. 437,136, Mar. 9; Serial No. 507,399, published Dec. 9, 1947.
Waterproofing compound material. Heineman & Lovett Company. 437,096, Mar. 9; Serial No. 491,715, published Dec. 9, 1947.
Windows, Storm. W. M. Krantz. 437,209, Mar. 9; Serial No. 518,766, published Dec. 9, 1947.
Zirconium dioxide and other oxygen derivatives of zirconium. Titanium Alloy Manufacturing Company. 437,172, Mar. 9; Serial No. 513,855, published Nov. 11, 1947.

CLASS 13

Brewers, Glass coffee. Hill-Shaw Company. 285,964, Aug. 11, 1931. Republished Mar. 9, 1948.
Hardware, Builders'. Oscar C. Rixson Company. 286,731, Sept. 1, 1931. Republished Mar. 9.
Pans, sauce pans, sauce pots, etc., Fry. Verson Manufacturing Company. 437,156, Mar. 9; Serial No. 512,466, published Dec. 2, 1947.
Pipe, pipe fittings, bolts, etc., Nonferrous-metal. Mueller Brass Co. 240,686, renewed Apr. 3, 1948. O. G. Mar. 9.
Pipe, pipe fittings, bolts, etc., Nonferrous-metal. Mueller Brass Co. 241,170, renewed Apr. 17, 1948. O. G. Mar. 9.
Valve balls, Rubber tank. Wolverine Brass Works. 242,767, renewed June 5, 1948. O. G. Mar. 9.

CLASS 14

Alloys, Bearing. Magnolia Metal Company. 292,998, Apr. 5, 1932. Republished Mar. 9.
Anchors, reinforcement bars, crossings, etc., Rail. Robert W. Hunt Co. 241,201, renewed Apr. 17, 1948. O. G. Mar. 9.
Bars, rods, billets, etc., Steel. Crucible Steel Company of America. 237,488, renewed Jan. 10, 1948. O. G. Mar. 9.
Iron and steel sheets, Galvanized. American Rolling Mill Company. 290,355, Jan. 5, 1932. Republished Mar. 9.

CLASS 15

Kerosene. Pure Oil Company. 264,485, Nov. 26, 1929. Republished Mar. 9.
Oils and greases, Lubricating. Pure Oil Company. 259,036, July 23, 1929. Republished Mar. 9.
Oils, lubricating greases, and gasoline, Lubricating. Waverly Oil Works Company. 241,046, renewed Apr. 17, 1948. O. G. Mar. 9.
Oils, Motor fuel. Pure Oil Company. 323,183, Apr. 2, 1935. Republished Mar. 9.
Oils, motor fuel oils, lubricating oils, etc., Illuminating. Pure Oil Company. 275,732, Sept. 30, 1930. Republished Mar. 9.

CLASS 16

Floor and linoleum finish. Howe & French, Inc. 298,142, Oct. 11, 1932. Republished Mar. 9.
Lacquer, varnish, stain, etc. Velsicol Corporation. 299,564, Dec. 13, 1932. Republished Mar. 9.
Lacquer, varnish, stain, etc. Velsicol Corporation. 299,670, Dec. 13, 1932. Republished Mar. 9.
Paint, Ready-mixed. Red Hand Compositions Company. 238,336, renewed Feb. 7, 1948. O. G. Mar. 9.
Paint, ready-mixed paints, and varnishes, Enamel. Aufdemkampe Hardware Co. 234,745, renewed Nov. 1, 1947. O. G. Mar. 9.
Paints, aeroplane and aircraft dopes, varnishes, etc., Dry and ready-mixed. Celanese Corporation of America. 240,109, renewed Mar. 20, 1948. O. G. Mar. 9.
Paints and calcimines, Cold water. W. F. Laucks, Inc. 323,308, Apr. 9, 1935. Republished Mar. 9.
Paints, paint enamel, crack sealer, Ready-mixed. Bako Process Company. 194,339, Jan. 30, 1925. Republished Mar. 9.
Pearl essence. Mearl Corporation. 311,362, Mar. 20, 1934. Republished Mar. 9.
Polishing preparation. Armstrong Cork Company. 298,945, Nov. 15, 1932. Republished Mar. 9.
Surfacing compound. Muralo Company, Inc. 241,186, renewed Apr. 17, 1948. O. G. Mar. 9.
Turpentine and linseed oil. William Graham & Company. 299,273, Nov. 29, 1932. Republished Mar. 9.
Wax, Liquid. Davies-Young Soap Company. 285,885, Aug. 11, 1931. Republished Mar. 9.
Wax, Liquid. Davies-Young Soap Company. 285,896, Aug. 11, 1931. Republished Mar. 9.

CLASS 17

Cigarettes. P. Lorillard Company. 437,302, Mar. 9; Serial No. 525,491, published Dec. 16, 1947.
Cigars. Gradiaz, Annis & Co., Inc. 437,177, Mar. 9; Serial No. 514,603, published Dec. 16, 1947.

Cigars. P. Lorillard Company. 437,305, Mar. 9; Serial No. 525,620, published Dec. 16, 1947.
Cigars, cigarettes, and tobaccos. Saks & Company. 437,158–60, Mar. 9; Serial Nos. 512,706–8, published Dec. 9, 1947.
Tobacco, Chewing and smoking. General Cigar Co., Inc. 437,155, Mar. 9; Serial No. 512,327, published Dec. 9, 1947.
Tobacco, Plug cut. P. Lorillard Company. 437,301, Mar. 9; Serial No. 525,352, published Dec. 9, 1947.
Tobacco, Plug, twist, and smoking. Taylor Brothers, Incorporated. 240,956, renewed Apr. 10, 1948. O. G. Mar. 9.
Tobacco, Smoking and chewing. Brown & Williamson Tobacco Corporation. 241,061–2, renewed Apr. 17, 1948. O. G. Mar. 9.

CLASS 19

Brakes and brake systems and parts thereof. Bragg-Kliesrath Corporation. 310,208, Feb. 13, 1934. Republished Mar. 9.
Radiators, radiator cores, and automobile heaters, Vehicle. Auto Radiator Manufacturing Company. 290,811, Jan. 19, 1932. Republished Mar. 9.

CLASS 20

Coverings, Linoleum and felt base wall. Armstrong Cork Company. 299,122, Nov. 22, 1932. Republished Mar. 9.
Oilcloth. Golding Bros. Company, Inc. 437,311, Mar. 9.

CLASS 21

Batteries, Storage. General Tire & Rubber Company. 311,281, Mar. 20, 1934. Republished Mar. 9.
Fixtures, Electric-lighting. Edwin F. Guth Company. 258,355, July 2, 1929. Republished Mar. 9.
Insulating compound, cable and conduit hangers, etc. Mineraliac Electric Company. 238,418, renewed Feb. 7, 1948. O. G. Mar. 9.
Radio receiving sets, Complete. Wasmuth-Goodrich Company. 225,976, Mar. 29, 1927. Republished Mar. 9.
Reflectors. Benjamin Electric Manufacturing Company. 265,967, Jan. 7, 1930. Republished Mar. 9.
Switches, Mercury. Absolute Con-Tac-Tor Corporation. 195,484, Feb. 24, 1925. Republished Mar. 9.
Switches, Temperature controlled electric. Spencer Thermostat Company. 285,709, Aug. 4, 1931. Republished Mar. 9.
Tools, Electrically operated. Kett Tool Company. 437,316, Mar. 9.

CLASS 22

Golf balls. Worthington Ball Company. 316,927, Sept. 11, 1934. Republished Mar. 9.
Golf balls. Worthington Ball Company. 323,896, May 7, 1935. Republished Mar. 9.
Golf-club irons. A. G. Spalding & Bros. 66,434, re-renewed Nov. 26, 1947. O. G. Mar. 9.
Rods, fishing rod handles, fishing rod cases, etc., Fishing. American Fork and Hoe Company. 258,244, July 2, 1929. Republished Mar. 9.
Skates, Ice skates and roller. Globe-Union Mfg. Co. 287,285, Sept. 15, 1931. Republished Mar. 9.

CLASS 23

Augers, auger-bits, reamers, etc. Norvell-Shapleigh Hardware Company. 68,010, re-renewed Mar. 3, 1948. O. G. Mar. 9.
Axes, adzes, broadaxes, etc. American Fork & Hoe Company. 283,564, June 2, 1931. Republished Mar. 9.
Blades, Haw-saw. E. C. Atkins and Company. 282,865, May 5, 1931. Republished Mar. 9.
Bodkins. J. J. Sindler. 315,933, Aug. 14, 1934. Republished Mar. 9.
Carburetors. Bendix Stromberg Carburetor Company. 311,537, Mar. 27, 1934. Republished Mar. 9.
Carvers, beef carvers, and breakfast carvers, Meat. Landers, Frary & Clark. 234,826, renewed Nov. 8, 1947. O. G. Mar. 9.
Chucks, Drill. Consolidated Machine Tool Corporation of America. 292,142, Mar. 1, 1932. Republished Mar. 9.
Compressors, pumps and tools, Air. Metalweld, Incorporated. 245,117, Aug. 7, 1928. Republished Mar. 9.
Cylinders, hydraulic operating valves, air compressors, etc., Hydraulic actuating. Electric Sprayit Co., The. 437,082, Mar. 9; Serial No. 481,617, published Oct. 8, 1946.
Engines, Internal-combustion. Cleveland Tractor Company. 147,965, Nov. 8, 1921. Republished Mar. 9.
Frame straighteners, teeter racks for automobiles, and automobile axle presses, Automobile. Bear Manufacturing Company. 292,908, Mar. 29, 1932. Republished Mar. 9.
Handles, Wooden. Turner, Day & Woolworth Handle Company. 316,030, Aug. 14, 1934. Republished Mar. 9.
Hoists, Hand. Beebe Bros. 231,163, renewed Aug. 16, 1947. O. G. Mar. 9.
Knives, Machine. E. C. Atkins & Company. 229,629, July 5, 1927. Republished Mar. 9.
Knives, Machine. Loring Coes & Co., Inc. 255,772, Apr. 30, 1929. Republished Mar. 9.

Machines, Heald Machine Company. 292,921, Mar. 29, 1932. Republished Mar. 9.
Razors and safety-razor blades, Safety. Treet Safety Razor Corporation. 240,969, renewed Apr. 10, 1948. O. G. Mar. 9.
Saws. E. C. Atkins and Company. 317,231, Sept. 18, 1934. Republished Mar. 9.
Sheaves and pulleys. Gates Rubber Company. 314,673, July 3, 1934. Republished Mar. 9.
Shovels. Leach Company. 289,575, Dec. 1, 1931. Republished Mar. 9.
Tools. J. Faessler Manufacturing Co. 68,996, re-renewed May 12, 1948. O. G. Mar. 9.
Tools, bolt cutters, horse-shoers', etc., Bit brace. Greenfield Tap and Die Corporation. 289,804, Dec. 8, 1931. Republished Mar. 9.
Water-softening systems and parts thereof. Elgin Softener Corporation. 264,017, Nov. 12, 1929. Republished Mar. 9.

CLASS 24

Washing machines, Clothes. F. L. Jacobs Co. 500,006, Mar. 9.

CLASS 25

Keys, locks and parts thereof. H. Hoffman. 437,099, Mar. 9; Serial No. 489,070, published Nov. 4, 1947.
Lock sets, locks, latches, etc., Door and closet. Lockwood Hardware Manufacturing Co. 437,135, Mar. 9; Serial No. 507,201, published Sept. 9, 1947.
Padlocks. Master Lock Company. 291,756, Feb. 23, 1932. Republished Mar. 9.
Safes, filing safes, note cases, etc. General Fireproofing Company. 287,258, Sept. 15, 1931. Republished Mar. 9.

CLASS 26

Calculating-machines. H. W. Egli. 66,214, re-renewed Nov. 19, 1947. O. G. Mar. 9.
Hydrometers. Elgin Softener Corporation. 288,806, Nov. 3, 1931. Republished Mar. 9.
Measuring rules. Bausch & Lomb Optical Company. 239,513, renewed Mar. 6, 1948. O. G. Mar. 9.
Time and thermostatic temperature controls, Combination. Minneapolis-Honeywell Regulator Company. 318,553, Oct. 30, 1934. Republished Mar. 9.
Valves, Temperature-controlled. Minneapolis-Honeywell Regulator Company. 282,192, Apr. 14, 1931. Republished Mar. 9.
Weather condition responsive control apparatus, Remotely located. Minneapolis-Honeywell Regulator Company. 323,780, Apr. 30, 1935. Republished Mar. 9.

CLASS 27

Watches. B. Selwyn. 437,106, Mar. 9; Serial No. 499,018, published Dec. 16, 1947.
Watches and parts thereof and clocks and parts thereof. Ebosa S. A. 437,117, Mar. 9; Serial No. 504,260, published Dec. 16, 1947.

CLASS 28

Buckles, Belt. Pioneer Suspender Company. 308,299, Nov. 28, 1933. Republished Mar. 9.
Buckles, Ornamental. I. Miller & Sons, Inc. 240,024, renewed Mar. 20, 1948. O. G. Mar. 9.
Buttons, collar holders, tie holders, etc., Collar. Hickok Manufacturing Co. Inc. 437,274, Mar. 9; Serial No. 523,668, published Dec. 16, 1947.
Dishware, Shallow. Ellmore Silver Co., Inc. 437,298, Mar. 9; Serial No. 525,202, published Dec. 16, 1947.
Flatware and sterling silver hollowware, Sterling silver. Watson Company. 288,097, Oct. 20, 1931. Republished Mar. 9.
Hollow ware and sterling silver flat ware, Sterling silver. Watson Company. 289,958, Dec. 15, 1931. Republished Mar. 9.
Jewelry, Precious and non-precious ornamental. Omar, Inc. 437,252, Mar. 9; Serial No. 521,991, published Dec. 16, 1947.
Tableware, Silverplated flat. Oneida Ltd. 437,282, Mar. 9; Serial No. 523,989, published Dec. 16, 1947.
Tableware, Silverplated flat. Oneida Ltd. 437,283, Mar. 9; Serial No. 523,991, published Dec. 16, 1947.
Tableware, Sterling silver flat. Oneida Ltd. 437,281, Mar. 9; Serial No. 523,982, published Dec. 16, 1947.

CLASS 29

Brushes. Nyko Laboratories, Inc. 310,274, Feb. 13, 1934. Republished Mar. 9.
Brushes, Hair. Stanley Home Products, Inc. 437,307, Mar. 9; Serial No. 525,972, published Nov. 25, 1947.
Brushes, Oval varnish. Whiting-Adams Company, Inc. 437,166, Mar. 9; Serial No. 513,363, published Sept. 2, 1947.

CLASS 30

Cups and saucers and other table chinaware, China. M. H. Patterson. 437,189, Mar. 9; Serial No. 516,568, published Dec. 16, 1947.

CLASS 32

Cabinets, Filing. General Fireproofing Co. 341,802, Dec. 22, 1936. Republished Mar. 9.

Counters, bakers' tables, etc., Pastry. Duke Manufacturing Co. 275,715, Sept. 30, 1930. Republished Mar. 9.
Desk tables, Folding. John Schroeder Lumber Co. 241,344, renewed Apr. 24, 1948. O. G. Mar. 9.
Drawers or boxes for record files, File. Globe-Wernicke Co. 323,710, Apr. 30, 1935. Republished Mar. 9.
Mattresses and bed springs. R. C. Heller Co. Inc. 437,182, Mar. 9; Serial No. 515,838, published Oct. 14, 1947.
Mattresses and box springs. E. Anspacher. 437,147, Mar. 9; Serial No. 510,227, published Oct. 7, 1947.
Secretaries, chests, desks, etc. Marshall Field & Company. 292,477, Mar. 15, 1932. Republished Mar. 9.
Suites, bedroom suites, living room suites, etc., Dining room. Stern & Co. 316,611, Aug. 28, 1934. Republished Mar. 9.

CLASS 34

Whiskey, gin, rum, etc. Continental Distilling Corporation. 319,858, Dec. 4, 1934. Republished Mar. 9.

CLASS 50

Closure or caps, Molded bottle and jar. Armstrong Cork Company. 283,037, May 12, 1931. Republished Mar. 9.
Protectors, Plant. W. R. Schindler. 323,933, May 7, 1935. Republished Mar. 9.

LIST OF REISSUE PATENTEES

TO WHOM

PATENTS WERE ISSUED ON THE 9TH DAY OF MARCH, 1948

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Better Packages, Inc., assignee: *See*—
Fitch, Harold L.
Donkersley, Albert B., and J. R. Welshman, Cranston, assignors to Grinnell Corporation, Providence, R. I. Spring hanger. Re. 22,980, Mar. 9.
Fitch, Harold L., Rochester, N. Y., assignor, by mesne assignments, to Better Packages, Inc., Shelton, Conn. Automatic tape dispenser and cutter. Re. 22,981, Mar. 9.
Foulkes, Christopher H., assignor to Standard Telephones and Cables Limited, London, England. Mechanical adjustment of elements mounted inside vacuum tubes. Re. 22,982, Mar. 9.
Grinnell Corporation, assignee: *See*—
Donkersley, Albert B., and Welshman.
Haddock, Norman H., Blackley, Manchester, England, assignor to Imperial Chemical Industries Limited. Manufacture of dyestuffs. Re. 22,983, Mar. 9.
Imperial Chemical Industries Limited, assignee: *See*—
Haddock, Norman H.
Standard Telephones and Cables, Limited, assignee: *See*—
Foulkes, Christopher H.
Welshman, James R.: *See*—
Donkersley, Albert B., and Welshman.

LIST OF PLANT PATENTEES

Armstrong Nurseries, Inc., assignee: *See*—
Swim, Herbert C.
Conard-Pyle Company, The, assignee: *See*—
Van Barneveld, John H.
Swim, Herbert C., assignor to Armstrong Nurseries, Inc., Ontario, Calif. Nectarine plant. 787, Mar. 9.
Van Barneveld, John H., Puente, Calif., assignor to The Conard-Pyle Company, West Grove, Pa. Rose plant. 788, Mar. 9.

LIST OF DESIGN PATENTEES

Air-Way Electric Appliance Corporation, assignee: *See*—
Nuffer, Joseph H., and Latta.
Alessandrini, Guido, Grand Rapids, assignor to Townsend Manufacturing Company, Zeeland, Mich. Provincial step table. 148,902, Mar. 9.
Amity Leather Products Co., assignee: *See*—
Reis, John P.
Ashdowne, James S., assignor to Joseph Buegeleisen Co., Inc., Detroit, Mich. Belt. 148,903, Mar. 9.
Baur, John W., and E. Gustafsson, assignor to Binks Manufacturing Company, Chicago, Ill. Spray gun or the like. 148,904, Mar. 9.
Belcher, Boris, Philadelphia, Pa. Condiment shaker. 148,906, Mar. 9.
Bendix Aviation Corporation, assignee: *See*—
Burton, Frank C.
Bextel, Robert O., Chicago, Ill. Combination lamp and potted plant bowl. 148,905, Mar. 9.
Binks Manufacturing Company, assignee: *See*—
Baur, John W., and Gustafsson.
Buegeleisen, Joseph, Co., Inc., assignee: *See*—
Ashdowne, James S.
Burton, Frank C., Grand Rapids, Mich., assignor to Bendix Aviation Corporation, South Bend, Ind. Radio cabinet or the like. 148,907, Mar. 9.
Cantor, Jacob J., Los Angeles, Calif. Ear drum protector. 148,908, Mar. 9.
Carlson, George W., Minneapolis, Minn. Scythe. 148,909, Mar. 9.
Casco Products Corporation, assignee: *See*—
Florian, Gordon W.
Chain Belt Company, assignee: *See*—
Stevens, Clifford B.
Chernow, Michael, New York, N. Y. Alphabet for forming monograms or the like. 148,910, Mar. 9.
Cobbs-Hopkins Company, assignee: *See*—
Hopkins, Horner H.
Coburn, Frank H.: *See*—
Dickerman, Donald H., and Coburn.
Coca-Cola Company, The, assignee: *See*—
Naiden, Anthony.
Comeau, Ernest J., Plattsburg, N. Y. Ladle. 148,911, Mar. 9.
Cookman, Helen C., assignor to M. E. Cookman, New York, N. Y. Work coat. 148,912, Mar. 9.
Cookman, Mary E., assignee: *See*—
Cookman, Helen C.
Crosby, Stephen A., Chicago, Ill., assignor to Sterling Tool Products Company. Handle for a sanding pad. 148,913, Mar. 9.
Daubenberger, Charles J., Pacific Palisades, assignor to Dauby Equipment Company, Santa Monica, Calif. Control unit. 148,914, Mar. 9.
Dauby Equipment Company, assignee: *See*—
Daubenberger, Charles J.
Decker, Otto, New York, N. Y. Revolving file. 148,915, Mar. 9.
Dickerman, Donald H., Newport Beach, Calif., and F. H. Coburn, Sea Cliff, N. Y. Table top. 148,916, Mar. 9.
Douglas, Eugene, Brooklyn, N. Y. Pen or like article. 148,917, Mar. 9.
Dreitzer, Albert J., assignor to Pitman-Dreitzer & Co., Inc., New York, N. Y. Ash tray or article of similar nature. 148,918, Mar. 9.
Duncan, Callie, The Dalles, Oreg. Food tongs. 148,919, Mar. 9.
Eisenberg, Henry, New York, N. Y. Scraper or similar article. 148,920, Mar. 9.
Everett, Harvey L., Mount Vernon, N. Y. Phonograph or the like. 148,921, Mar. 9.
FR Corporation, The, assignee: *See*—
Nevell, Thomas G. W., and Samet.
Fleischer, William A., Grand Island, Nebr. Machine seat. 148,922, Mar. 9.
Florian, Gordon W., assignor to Casco Products Corporation, Bridgeport, Conn. Wall clock. 148,923, Mar. 9.
Freedman, Stephen B., New York, N. Y. Embossed leather or similar article. 148,924, Mar. 9.
Ganser, Harry A., New York, N. Y. Coaster or similar article. 148,925, Mar. 9.
Goldberg, Abraham M., Denver, Colo. Scarf. 148,926, Mar. 9.
Graham, Elizabeth N., New York, N. Y. Combined sachet bag and perfume bottle container. 148,927, Mar. 9.
Gustafsson, Eric: *See*—
Baur, John W., and Gustafsson.
Hardesty, Jean A., Altadena, assignor to Signal Oil Company, Los Angeles, Calif. Automobile service station island. 148,928, Mar. 9.
Hartnett, Paul L., Leominster, Mass. Picture frame. 148,929, Mar. 9.
Hickman, Bertram M., London, England. Child's brick. 148,930, Mar. 9.
Hopkins, Horner H., assignor to Cobbs-Hopkins Company, Des Moines, Iowa. Razor and blade holder. 148,931, Mar. 9.
Kaplan, David, New York, N. Y. Candle holder. 148,932, Mar. 9.
Karleen, Edward H., Morris Township, Morris County, assignor to Karleen, Incorporated, Morris Plains, N. J. Adjustable line connector. 148,933, Mar. 9.
Karleen, Incorporated, assignee: *See*—
Karleen, Edward H.
Kosloff, Lou, Hollywood, Calif. Saddle. 148,934, Mar. 9.
Kuns, Ray F., Cincinnati, Ohio. Trailer. 148,935, Mar. 9.

Latta, Lynn H.: *See* —
Nuffer, Joseph H., and Latta.
Layton, Harry L., assignor to Samson-United Corporation, Rochester, N. Y. Electric toaster. 148,936, Mar. 9.
Lyon, George A., Allenhurst, N. J. Wheel cover or similar article. 148,937, Mar. 9.
MacLennan, John C., Toronto, Ontario, Canada. Luminous pendant. 148,938, Mar. 9.
Martin, Edward D., Milwaukee, Wis. Fork for bicycles and velocipedes. 148,939, Mar. 9.
Motter, Charles S., Chicago, Ill. Corner wall cabinet. 148,940, Mar. 9.
Muller, Carl H., St. Louis, Mo. Toy food mixer. 148,941, Mar. 9.
Naiden, Anthony, Southwick, Mass., assignor to The Coca-Cola Company, Wilmington, Del. Beverage dispenser. 148,942, Mar. 9.
Nassif, David, Woburn, Mass. Barbecue cooker. 148,943, Mar. 9.
Nevell, Thomas G., Riverside, Conn., and F. Samet, assignors to The Fit Corporation, New York, N. Y. Photographic film and print tray or similar article. 148,944, Mar. 9.
Nuffer, Joseph H., Toledo, Ohio, and L. H. Latta, Los Angeles, Calif., assignors to Air-Way Electric Appliance Corporation, Toledo, Ohio. Suction cleaner casing. 148,945, Mar. 9.
O'Donnell, George J., Waterbury, Conn. Playing card. 148,946, Mar. 9.
Olin, Norman E., New York, N. Y. Display tray. 148,947, Mar. 9.
Ovenshire, Clyde A., Berkeley, Calif. Combination baking dish, griddle, and dutch oven. 148,948, Mar. 9.
Peets, Wilbur J., assignor to The Singer Manufacturing Company, Elizabeth, N. J. Sewing machine cabinet. 148,949, Mar. 9.
Petry, John, New York, assignor to Raylite Electric Corporation, Bronx, N. Y. Illuminable bubbling device or the like. 148,950, Mar. 9.
Pfefferling, Richard, New York, assignor to R. Rosen, Long Island City, N. Y. Shoe toe-cap stretcher. 148,951, Mar. 9.
Phelps, Albert D., Jr., Babson Park, Mass. Ring toy or similar article. 148,952, Mar. 9.
Philippe, Alfred, Scarsdale, assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y. Brooch or similar article. 148,953, Mar. 9.
Pitman-Dreitzer & Co., Inc., assignee: *See*—
Dreitzer, Albert J.
Plastic Treasures, Inc., assignee: *See*—
Sawyer, Albert B.
Potts, Evelyn M., Grand Ledge, Mich. Baby shoe. 148,954, Mar. 9.
Raylite Electric Corporation, assignee: *See*—
Petry, John.
Reis, John P., assignor to Amity Leather Products Co., West Bend, Wis. Combined billfold and coin purse. 148,955, Mar. 9.
Rhodes, Harold B., Hollywood, Calif. Combined article support and seat. 148,956, Mar. 9.
Rice, Lee, Homeland, Fla. Combination tool. 148,957, Mar. 9.
Robinette, Harrie W., Chicago, Ill. Mail box. 148,958, Mar. 9.
Rosen, Richard, assignee: *See*—
Pfefferling, Richard.
Ryan, Matthew E., Chicago, Ill. Salad dispenser. 148,959, Mar. 9.
Samet, Frank: *See*—
Nevell, Thomas G. W., and Samet.
Samson-United Corporation, assignee: *See*—
Layton, Harry L.
Sawyer, Albert B., Brooklyn, assignor to Plastic Treasures, Inc., New York, N. Y. Child's training chair or similar article. 148,960, Mar. 9.
Schofield, Earl L., Rockford, Ill., assignor to Superior Coach Corporation, Lima, Ohio. Hier-pin. 148,961, Mar. 9.
Sherrill, Burl E., assignor to Sherrill Research Corporation, Peru, Ind. Auto compass. 148,962, Mar. 9.
Sherrill Research Corporation, assignee: *See*—
Sherrill, Burl E.
Signal Oil Company, assignee: *See*—
Hardesty, Jean A.
Singer Manufacturing Company, The, assignee: *See*—
Peets, Wilbur J.
Sterling Tool Products Company, assignee: *See*—
Crosby, Stephen A.
Stevens, Clifford B., Fox Point, assignor to Chain Belt Company, Milwaukee, Wis. Road paving machine. 148,963, Mar. 9.
Superior Coach Corporation, assignee: *See*—
Schofield, Earl L.
Tarlow, Isidor, Brockton, Mass. Shoe. 148,964, Mar. 9.
Thienhaus, Agnes E., Milwaukee, Wis. Combined candelabrum and flower vase. 148,965, Mar. 9.
Townsend Manufacturing Company, assignee: *See*—
Alessandrini, Guido.
Trifari, Krussman & Fishel, Inc., assignee: *See*—
Philippe, Alfred.
Wallace, Joseph, Cedarhurst, N. Y. Fountain pen clip. 148,966, Mar. 9.
Warrender, Ralph, Sharon, Pa. Bobsled. 148,967, Mar. 9.
Wettlaufer, Elmer G., Bloomfield Hills, Mich. Combined arm rest and door pull. 148,968, Mar. 9.
Wilson, Thomas W., Millville, N. J. Lamp. 148,969, Mar. 9.
Yutang, Lin, New York, N. Y. Font of keyboard symbols. 148,970, Mar. 9.

LIST OF PATENTEES

TO WHOM

PATENTS WERE ISSUED ON THE 9TH DAY OF MARCH, 1948

NOTE.- Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Aas, Bjarne, Fredrikstad, Norway; vested in the Attorney General of the United States. Apparatus for cutting the bevel on hull planking. 2,437,236, Mar. 9.
Aber, Joseph S., assignor of 6 per cent to W. S. Loeb, Philadelphia, Pa. Packing gasket and static seal. 2,437,586, Mar. 9.
Abrani, Oliver R., Glendale, Calif. Electric welding ground. 2,437,633, Mar. 9.
Aikman, Burton S., Wilkinsburg, assignor to The Westinghouse Air Brake Company, Wilmerding, Pa. Compressor mechanism. 2,437,341, Mar. 9.
Air-Maze Corporation, assignee: *See*—
Brown, Richard E.
Air Reduction Company, Incorporated, assignee: *See*—
Heidbrink, Jay A., and Herrick.
Vance, Robert M., and Horney.
Aksien, John, Minneapolis, Minn. Corner assembly and fastening means for knockdown counters and the like. 2,437,235, Mar. 9.
Aktiebolaget Pharmacia, assignee: *See*—
Grönwall, Anders J. T., and Ingelman.
Aktiengesellschaft der Eisen-und Stahlwerk vorm. Georg Fischer, Schaffhausen, assignee: *See*—
Von Zelewsky, Ottomar.
Albers, John R., Sioux City, Iowa, assignor to Wincharger Corporation. Balanced impeller structure for wind motors. 2,437,650, Mar. 9.
All American Aviation, Inc., assignee: *See*—
Ballard, Hyde W.
Setz, Walter H.
Allen, Arthur C., assignor to Stewart-Warner Corporation, Chicago, Ill. Absolute pressure gauge. 2,437,371, Mar. 9.
Allen, Walter H., Birmingham, England, assignor to Sandvik Steel Incorporated, New York, N. Y. Transferring heat to or from material on band conveyors. 2,437,492, Mar. 9.
Allied Chemical & Dye Corporation, assignee: *See*—
Robinson, Richard S.
Aluminum Company of America, assignee: *See*—
Speer, William F.
American Brake Shoe Company, assignee: *See*—
Staiger, Otto K.
American Catheter Corporation, assignee: *See*—
Krippendorf, Louis H.
American Chemical Paint Company, assignee: *See*—
Jones, Franklin D.
American Cyanamid Company, assignee: *See*—
Houpt, Alfred G.
Lecher, Hans Z., Parker, and Hofmann.
Long, Robert S., and Lewis.
West, Herbert J., and Enterline.
American Forging and Socket Company, assignee: *See*—
McCarthy, Charles S.
American Optical Company, assignee: *See*—
Peck, William F., Harper, and Estey.
Ames, Millard E., Jr., Philadelphia, and D. E. Sunstein, Elkins Park, assignors to Philco Corporation, Philadelphia, Pa. Reflex thermal electric meter. 2,437,449, Mar. 9.
Andersen, Carl N., Pleasantville, N. Y., assignor, by mesne assignments, to Gallowhur Chemical Corporation. Aromatic mercury alcoholates. 2,437,450, Mar. 9.
Anderson, John E., assignor to Phibrico Jointless Firebrick Company, Chicago, Ill. Seam protector for boilers. 2,437,634, Mar. 9.
Anderson, Nels B., Minneapolis, Minn. Blade honing device. 2,437,495, Mar. 9.
Anderson, Ray B., Charleston, W. Va. Separation of gaseous mixtures. 2,437,288, Mar. 9.
Anderson, Roy H., Fort Dodge, Iowa. Knockdown article and joint therefor. 2,437,494, Mar. 9.
Anderson, Theodore G., Kennett Square, Pa., assignor, by mesne assignments, to Hazeltine Research, Inc., Chicago, Ill. Diode detector circuit. 2,437,493, Mar. 9.
Aram, Nathan W., assignor to Zenith Radio Corporation, Chicago, Ill. Phasing network. 2,437,496, Mar. 9.
Archbald, Joseph A., Jr., Buffalo, N. Y. Method and apparatus for quick-freezing foods. 2,437,414, Mar. 9.
Arenta, Johan R. S., Chicago, Ill. Attachment plug and fuse. 2,437,635, Mar. 9.
Associated Chemical Company of Canada Limited, assignee: *See*—
Rogers, Linnaeus J.
Atomic Energy Commission, United States of America, as represented by the, assignee: *See*—
Crampton, George S.
Parker, Herbert M.
Attorney General of the United States, The: *See*—
Aas, Bjarne.
Dallenbach, Walter.
Automatic Voting Machine Corporation, assignee: *See*—
Gustavson, Alvin N.
Avco Manufacturing Corporation, assignee: *See*—
Davis, Dwilliard J.
Bach, Henry M., Lawrence, assignor to Premier Crystal Laboratories, Inc., New York, N. Y. End-loaded piezoelectric unit. 2,437,660, Mar. 9.
Bacon, Henry M., Dayton, Ohio, assignor to The Dayton Rubber Company. Drop box picker. 2,437,342, Mar. 9.
Bailey Meter Company, assignee: *See*—
Hornfeck, Anthony J.
Bailey, Theodore, Habana, Cuba. Caster for furniture. 2,437,312, Mar. 9.
Baird, William M., Chicago, Ill. Locker refrigerating system. 2,437,451, Mar. 9.
Baird, William M., Chicago, Ill. Forced air circuit refrigerating apparatus. 2,437,452, Mar. 9.
Bakelite Corporation, assignee: *See*—
Butler, William H.
Ballard, Hyde W., Merion, Pa., assignor to All American Aviation, Inc., Wilmington, Del. Pickup and delivery container. 2,437,372, Mar. 9.
Barnitz, Edward S., assignor to Distillation Products, Inc., Rochester, N. Y. Preparation of improved drying oils. 2,437,343, Mar. 9.
Barrick, Paul L., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Cyanocyclobutane derivatives. 2,437,280, Mar. 9.
Bartlett, Forrest A., Gardena, Calif. Automatic telegraph key. 2,437,497, Mar. 9.
Barton, George, Racine, Wis., assignor to Buxton, Incorporated, Springfield, Mass. Flexible pocket receptacle. 2,437,587, Mar. 9.
Bastian-Blessing Company, The, assignee: *See*—
Johnson, Herman K.
Baum, Charles A., Hamilton, Ohio. Caster. 2,437,588, Mar. 9.
Baxter, Roberta J., assignee, et al.: *See*—
Smith, George B.
Becker, John G., Los Angeles, Calif. Clothes-washing machine. 2,437,636, Mar. 9.
Bedford, Alda V., Princeton, N. J., assignor to Radio Corporation of America. Electrical servo system. 2,437,313, Mar. 9.
Behlmann, Herman M., Pewaukee, Wis. Insulator and support for electrically charged fence wires. 2,437,344, Mar. 9.
Beitch, Sol J., and S. Fine, Brooklyn, N. Y. Combination illuminated telephone stand and memo pad and pencil. 2,437,237, Mar. 9.
Belgau, Robert C., Detroit, Mich. Electrical heating apparatus for liquids. 2,437,453, Mar. 9.
Bell, John F., assignor to Zenith Radio Corporation, Chicago, Ill. Temperature compensated variable inductance. 2,437,345, Mar. 9.
Bell, Katherine V., Jersey City, N. J. Clothespin dispenser. 2,437,498, Mar. 9.
Bell Telephone Laboratories, Incorporated, assignee: *See*—
Marrison, Warren A.
Miller, Stewart E.
Ohl, Russell S.
Peek, Robert L., Jr.
Skellett, Albert M.
Bendix Aviation Corporation, assignee: *See*—
Nardone, Romeo M.
Ogden, William L. W., and Ryan.
Benjamin, George W., Birmingham, Ala., assignor to Continental Gin Company. Belt conveyor frame construction. 2,437,499, Mar. 9.
Bergerioux, René, Saint-Cloud, France. Tethered ball game apparatus. 2,437,454, Mar. 9.
Berman, Samuel, Richmond Hill, assignor to Waugh Equipment Company, New York, N. Y. Locator. 2,437,455, Mar. 9.
Berndtson, John O., Short Beach, assignor to The Snow-Nabstedt Gear Corporation, New Haven, Conn. Transmission mechanism. 2,437,314, Mar. 9.
Bernstein, Edward A., Cedarhurst, N. Y. Flashlight holder. 2,437,373, Mar. 9.
Berry, Clifton V., New York, N. Y. Cooperative social and business card display. 2,437,415, Mar. 9.
Bick Corporation, assignee: *See*—
Wright, Roland T.
Bink, Arthur R., Westfield, N. J. Telescoping dispensing nozzle with fluid pressure-operated safety valve. 2,437,589, Mar. 9.

Bludworth, Timothy F., Summit, N. J., assignor to National-Simplex-Bludworth, Inc. Deep and aboal alarm. 2,437,416, Mar. 9.

Boardman, Harry C., Chicago, Ill., assignor to Chicago Bridge & Iron Company. Lifter roof. 2,437,238, Mar. 9.

Bodine, Albert G., Jr., Burbank, assignor to The Calpat Corporation, Los Angeles, Calif. Method of and apparatus for treating wells. 2,437,456, Mar. 9.

Boecking, Ewald, Great Kills, assignor to Manufacturers Machine & Tool Co., Inc., Mount Vernon, N. Y. Film registry means for motion-picture projectors. 2,437,239, Mar. 9.

Bookman, Esther D., New York, N. Y. Refrigerating and air conditioning apparatus. 2,437,417, Mar. 9.

Booth, Douglas G.: *See*—
Pugh, Cyril A., Rough, and Booth.

Bossart, Paul N., Cheswick, assignor to The Union Switch & Signal Company, Swissvale, Pa. Supplying pulses of modulated current. 2,437,315, Mar. 9.

Bottenberg, Kenneth C., and J. A. Richardson, Bartlesville, Okla., assignors to Phillips Petroleum Company. Manufacturing anhydrous HCl. 2,437,290, Mar. 9.

Bourne, Raymond D., Middletown, Ohio. Windmill. 2,437,346, Mar. 9.

Bourne, Roland B., West Hartford, assignor to The Maxim Silencer Company, Hartford, Conn. Snowplow. 2,437,291, Mar. 9.

Bowe, Thomas A., Hilbert, Wis. Steering gear for wheeled vehicles. 2,437,590, Mar. 9.

Brandt, Philipp: *See*—
Ratti, Roger, and Brandt.

Brennan, Joseph B., assignee: *See*—
Moynihan, John J.

Bridge, Edward W., Philadelphia, Pa. Slicing, cutting, and core-removing machine. 2,437,637, Mar. 9.

Briggs, Carl R., Mantua, assignor of one-half to J. Cunningham, Akron, Ohio. Boiler construction. 2,437,347, Mar. 9.

Briggs & Stratton Corporation, assignee: *See*—
Jacobi, Edward N.

Briskin, Jack: *See*—
Briskin, Theodore S. and J., and Golick.

Briskin, Theodore S. and J., and J. Golick, assignors to Revere Camera Company, Chicago, Ill. Electric control device. 2,437,591, Mar. 9.

Brockman, Morton S., Cleveland, Ohio. Lamp shade. 2,437,292, Mar. 9.

Brooks, Richard E.: *See*—
Gresham, William F., Brooks, and Bruner.

Brown, Kenneth H., Hinsdale, and C. G. Gerhold, Riverside, assignors to Universal Oil Products Company, Chicago, Ill. Refining of hydrocarbon oil containing mercaptans. 2,437,348, Mar. 9.

Brown, Richard E., South Euclid, assignor to Air-Maze Corporation, Cleveland, Ohio. Dust separator and filter. 2,437,592, Mar. 9.

Brown, William C., Watertown, assignor to Raytheon Manufacturing Company, Newton, Mass. Space discharge device. 2,437,240, Mar. 9.

Bruce, Ernest G.: *See*—
Watter, Michael, and Bruce.

Bruegger, Ernest, Massillon, Ohio, assignor to The Griscom-Russell Company, New York, N. Y. Apparatus for bending metal strips edgewise in making helical fins. 2,437,500, Mar. 9.

Bruner, Walter M.: *See*—
Gresham, William F., Brooks, and Bruner.

Bryant Electric Company, The, assignee: *See*—
Webster, Benjamin C.

Budd Company, The, assignee: *See*—
Eksergian, Carolus L.
Watter, Michael, and Bruce.

Buffalo-Springfield Roller Co., The, assignee: *See*—
Harrison, John F., and Greiner.

Burkhard, Charles A., Alpiaus, and W. I. Patnode, Schenectady, N. J., assignors to General Electric Company. Stabilizing methyl-substituted polysiloxanes. 2,437,501. Mar. 9.

Burlin, Leslie H., Valparaiso, Ind., assignor to M. L. Sturm, Evanston, doing business as Milton Sturm & Company, Chicago, Ill. Toy gymnasium for baby cribs. 2,437,241, Mar. 9.

Burroughs, Robert E., Washington, D. C., assignor to Eastman Kodak Company, Rochester, N. Y. Magnetic field measuring device. 2,437,374, Mar. 9.

Butler, Ernest H., Arlington, Va. Hairpin. 2,437,502, Mar. 9.

Butler, William H., Bloomfield, N. J., assignor to Bakelite Corporation. Emulsions containing a drying oil-ester resin copolymer. 2,437,293, Mar. 9.

Buxton, Frank E., Wellesley, Mass. Crossarm for transmission wires. 2,437,375, Mar. 9.

Buxton, Incorporated, assignee: *See*—
Barton, George.

Calpat Corporation, The, assignee: *See*—
Boding, Albert G., Jr.

Carboloy Company, Inc., assignee: *See*—
Taylor, George F.

Carter, William J., Seattle, Wash. Electric range. 2,437,376, Mar. 9.

Case, Rogers, Orange, N. J. Reinforced wire-contacting insulator assembly. 2,437,593, Mar. 9.

Cawein, Madison, Fort Wayne, Ind., assignor, by mesne assignments, to Farnsworth Research Corporation. Television image tube. 2,437,418, Mar. 9.

Celanese Corporation of America, assignee: *See*—
Eastwood, Donald R.

Chain Belt Company, assignee: *See*—
Klaucke, Hermann.

Chandler, Milton E., New Britain, assignor, by mesne assignments, to Niles-Bement-Pond Company, West Hartford, Conn. Control apparatus for internal-combustion engines. 2,437,377, Mar. 9.

Chase, Herbert S., Worcester, Mass. Knitting box. 2,437,503, Mar. 9.

Chassaing, Pierre: *See*—
Guinot, Henri M., and Melle.

Chicago Bridge & Iron Company, assignee: *See*—
Boardman, Harry C.

Chicago Telephone Supply Company, assignee: *See*—
Veatch, Joseph G.

Chrysler Corporation, assignee: *See*—
Hicks, Harold A.
Matulaitis, Victor E., and Iavelli.

Ciba Pharmaceutical Products Inc., assignee: *See*—
Schaaf, Fritz.

Cities Service Oil Company, assignee: *See*—
Levitt, Percy B., and Morgan.

Clark, Eugene F., Damariscotta, Maine, assignor to Marshall Field and Company, Chicago, Ill. Method of and apparatus for weaving. 2,437,378, Mar. 9.

Clark, Eugene F., Damariscotta, Maine, assignor to Marshall Field and Company, Chicago, Ill. Loom for weaving pile fabric. 2,437,379, Mar. 9.

Clark, Robert H., assignee: *See*—
Smith, Lawson A.

Clements, Louis F., Los Angeles, Calif. Trouser-creasing apparatus. 2,437,457, Mar. 9.

Coake, Charles F., Indianapolis, assignor to Senn Corporation, New Augusta, Ind. Oscillator controlled follow-up system. 2,437,661, Mar. 9.

Cobb, Leland D., Forestville, Conn., assignor to Draper Corporation, Hopedale, Mass. Harness motions. 2,437,349, Mar. 9.

Cole, Robert A., Moline, Ill., and D. I. Smith, Vincent, Ohio. Telemetering transmitter. 2,437,242, Mar. 9.

Conn, John B., Scotch Plains, assignor to Merck & Co., Inc., Rahway, N. J. Thiamin dioctyl sulfo succinate. 2,437,504. Mar. 9.

Consolidated Royal Chemical Corporation, assignee: *See*—
Lerner, Louis L.

Continental Coffee Company, assignee: *See*—
Hamlet, Darrel P.

Continental Gin Company, assignee: *See*—
Benjamin, George W.

Cooklin, Leonard, and T. R. Hollis, assignors to Charles Twigg & Company Limited, Birmingham, England. Collapsible carriage. 2,437,380, Mar. 9.

Corcoran, James P., West Los Angeles, assignor to Twentieth Century-Fox Film Corporation, Los Angeles, Calif. Stroboscopic light valve checking machine. 2,437,419, Mar. 9.

Cox, Arthur, assignor to Taylor, Taylor & Hobson Limited, Leicester, England. Optical objective. 2,437,505, Mar. 9.

Craig, W. E.: *See*—
Hester, William F., and Craig.

Crampton, George S., Philadelphia, Pa., assignor, by mesne assignments, to the United States of America, as represented by the Atomic Energy Commission. Inspection periscope. 2,437,458, Mar. 9.

Crompton & Knowles Loom Works, assignee: *See*—
Turner, Richard G.

Crosman, Loring P., South Orange, assignor to Monroe Calculating Machine Company, Orange, N. J. Repeater compass. 2,437,506, Mar. 9.

Crucible Steel Company of America, assignee: *See*—
Williams, Morris F., and Gallt.

Crumrine, Chester W., Irondquoit Township, Monroe County, assignor, by mesne assignments, to LFC Corporation, Rochester, N. Y. Animal trap. 2,437,507, Mar. 9.

Cullen, Arthur V., Jamaica Plain, Mass. Embalming appliance. 2,437,381, Mar. 9.

Cunningham, George J., Babylon, N. Y. Clock. 2,437,459, Mar. 9.

Cunningham, John, assignee: *See*—
Briggs, Carl R.

Curtis, Richard P., Marblehead, assignor, by mesne assignments, to Submarine Signal Company, Boston, Mass. Plotting and computing device. 2,437,243, Mar. 9.

Czap, Eva A., Philadelphia, Pa. Handbag provided with removable, washable cover. 2,437,382, Mar. 9.

D'Alelio, Gaetano F., assignor to Pro-phy-lac-tic Brush Company, Northampton, Mass. Vulcanizable copolymers of a vinyl aryl compound, butadiene, and vinyl ethers. 2,437,420, Mar. 9.

D'Alelio, Gaetano F., assignor to Pro-phy-lac-tic Brush Company, Northampton, Mass. Vulcanizable copolymers of acrylonitrile, butadiene, and vinyl ethers. 2,437,421, Mar. 9.

D'Alelio, Gaetano F., Northampton, Mass., assignor to General Electric Company. Copolymers of mixtures comprising allyl and methallyl ether esters. 2,437,508. Mar. 9.

Dalin, David, Sodertalje, Sweden. Dust separator. 2,437,294, Mar. 9.

Dallenbach, Walter, Berlin W. 35, Germany; vested in the Attorney General of the United States. Junction between concentric and parallel conductor systems. 2,437,244, Mar. 9.

Dalton, Swanton D., Summit, N. J., assignor to Socony-Vacuum Oil Company, Incorporated. Cracking process. 2,437,383, Mar. 9.

Dardelet Threadlock Corporation, assignee: *See*—
Evans, Edwin R.

Davis, Dwillard J., Detroit, Mich., assignor to Avco Manufacturing Corporation. Spot milling tubular blank for propeller blades. 2,437,317, Mar. 9.

Dawson, Albert J., Sewickley, assignor to Dravo Corporation, Pittsburgh, Pa. Insulated wall construction for hulls, deck houses, and the like. 2,437,509, Mar. 9.

Dayton Rubber Company, The, assignee: *See*—
Bacon, Henry M.
Rockoff, Joseph.

De Francisci, Joseph, Brooklyn, N. Y. Alimentary paste extrusion apparatus. 2,437,460, Mar. 9.

De Havilland Aircraft Company Limited, The, assignee: *See*—
Halford, Frank B.

Delinted Seed Company, assignee: *See*—
McLemore, Price C.

Denys, Orban, Brooklyn, assignor to Distillation Products, Inc., Rochester, N. Y. Distillation from a film by diffusion into a gas stream. 2,437,594, Mar. 9.

De Young, William, Hawthorne, and E. C. Weathered, Jersey City, N. J. Abrading machine. 2,437,245, Mar. 9.

Distillation Products, Inc., assignee: *See*—
Barnitz, Edward S.
Denys, Orban.

Distillers Company, Limited, The, assignee: *See*—
Tuerck, Karl H. W., and Lichtenstein.

Ditty, Allan V., Detroit, Mich. Telescoping joint. 2,437,510, Mar. 9.

Donaldson, Eleanor, and J. Gibney; said Gibney assignor to Munsingwear, Inc., Minneapolis, Minn. Undergarment for ladies or children. 2,437,511, Mar. 9.

Douglass, Roy D., Minneapolis, Minn. Case for drills. 2,437,595, Mar. 9.

Dow Chemical Company, The, assignee: *See*—
Haynes, James D.

Draper Corporation, assignee: *See*—
Cobb, Leland D.
Rogers, Leonard M.
Tuten, James M.

Dravo Corporation, assignee: *See*—
Dawson, Albert J.

Drinkwater Inc., assignee: *See*—
Drinkwater, William S.

Drinkwater, William S., Chicago, assignor, by mesne assignments, to Drinkwater Inc., Waukegan, Ill. Flexible pipe coupling. 2,437,246, Mar. 9.

Dryden Rubber Company, assignee: *See*—
Kelly, John H., Jr.

Dunham, James V.: *See*—
Smith, Herschel, Dunham, and Turnbull.

Dunham, Le Roy S., East Orange, assignor to Thomas A. Edison, Incorporated, West Orange, N. J. Protective gas-permeable container for air-depolarized cells. 2,437,422, Mar. 9.

Du Pont, E. I., de Nemours & Company, assignee: *See*—
Barrick, Paul L.
Gresham, William F., Brooks, and Bruner.
Salisbury, Leroy F.
Wilson, Cyril D.

Durand & Huguenin S. A., assignee: *See*—
Ratti, Roger, and Brandt.

Dworkin, Nathan, assignee: *See*—
Handler, Harry.

Eastman Kodak Company, assignee: *See*—
Burroughs, Robert E.
Tucker, William M.
Tuttle, Clifton M.
Weyerts, Walter J., and Wiederhold.

Eastwood, Donald R., Drummondville, Quebec, Canada, assignor to Celanese Corporation of America. Cutting device. 2,437,295, Mar. 9.

Edison, Thomas A., Incorporated, assignee: *See*—
Dunham, Le Roy S.
Hornbostel, John.

Ekse, Ingvald J., Minneapolis, Minn. Circumferentially travelling roller type, support mounted, tire mounting apparatus. 2,437,512, Mar. 9.

Eksergian, Carolus L., Detroit, Mich., assignor to The Budd Company, Philadelphia, Pa. Brake control device. 2,437,423, Mar. 9.

Electric Wheel Company, assignee: *See*—
Richey, Clarence B.

Elliot Equipment Limited, assignee: *See*—
Hann, Kenneth G.

Enterline, Henry M.: *See*—
West, Herbert J., and Enterline.

Estey, Roger S.: *See*—
Peck, William F., Harper, and Estey.

Eureka Williams Corporation, assignee: *See*—
Williams, Walter W.

Evans, Edwin R., Orchard Lake Village, Mich., assignor to Dardelet Threadlock Corporation. Stud and installation thereof. 2,437,638, Mar. 9.

Even-Pul Foundations, Inc., assignee: *See*—
Rosner, Irving.

Farnsworth Research Corporation, assignee: *See*—
Cawein, Madison.
Mayle, Louis F.

Faulkner, Russell E., Chicago, Ill. Device for conveying picked fruit from the hand to a remote receptacle. 2,437,461, Mar. 9.

Faximile, Inc., assignee: *See*—
Hogan, John V. L., and Ressler.

Federal Telephone and Radio Corporation, assignee: *See*—
Labin, Emile.

Ferlin, Paul E., New York, and E. Rambusch, Harrison, assignors to Rambusch Decorating Company, New York, N. Y. Lighting system and lantern for use therein. 2,437,350, Mar. 9.

Ferrill, Thomas M.: *See*—
Frische, Carl A., Ferrill, and Slater.

Field, William J., assignor to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn. Aircraft heating control system. 2,437,318, Mar. 9.

Fine, Samuel: *See*—
Beitch, Sol J., and Fine.

Fischer, Kermit, Bridge Valley, Pa. Specific gravity indicator. 2,437,247, Mar. 9.

Flannery Bolt Company, assignee: *See*—
Greenslade, Grover R.

Fleig, Arthur C., Orange, Tex. Rattrap. 2,437,248, Mar. 9.

Floe, Carl F., Belmont, Mass., assignor to The Nitralloy Corporation. Nitriding. 2,437,249, Mar. 9.

Floyd, Frederick K., assignor to Metron Instrument Company, Denver, Colo. Electrical measuring apparatus. 2,437,639, Mar. 9.

Fluor Corporation, Ltd., The, assignee: *See*—
Stephens, Foster M.

Flynn, Robert A., United States Navy. Selective disconnection of aileron controls. 2,437,250, Mar. 9.

Follmer, Joseph: *See*—
Follmer, Joseph A. and J.

Follmer, Joseph A. and J., Denver, Colo. Quick adjustable bench vise. 2,437,351, Mar. 9.

Ford, Hannibal C., Jamaica, assignor to Ford Instrument Company, Inc., Long Island City, N. Y. Fire-control instrument. 2,437,463, Mar. 9.

Ford Instrument Company, Inc., assignee: *See*—
Ford, Hannibal C.

Forsberg, Harold S., Shelton, Conn. Tool. 2,437,296, Mar. 9.

Fox, Irving: *See*—
Raskin, Archie, Fox, and Puls.

Fragen, Nathan, Hammond, Ind., assignor to Standard Oil Company, Chicago, Ill. Recovery of catalysts. 2,437,352, Mar. 9.

Frische, Carl A., Great Neck, T. M. Ferrill, Jr., Hempstead, and J. M. Slater, Garden City, N. Y., assignors to The Sperry Corporation. Stabilized radio direction finder and homing device. 2,437,251, Mar. 9.

Frye, Frederick E. J., Weston, Ontario, and E. A. Pollard, Ville St. Laurent, Quebec, assignors to The Honorary Advisory Council for Scientific and Industrial Research, Ottawa, Ontario, Canada. Demand valve. 2,437,462, Mar. 9.

Gable, Paul T., Harrisburg, and W. C. Weiss, Penbrook, Pa. Air tight mail slot. 2,437,319, Mar. 9.

Gales, Robert S.: *See*—
Watson, Norman A., Veneklasen, Leonard, and Gales.

Gallowhur Chemical Corporation, assignee: *See*—
Andersen, Carl N.

Gallt, Seymour B.: *See*—
Williams, Morris F., and Gallt.

Galvin, George B., Springfield, Ohio. Steel wool machine. 2,437,424, Mar. 9.

Gambino, Nate, and N. La Rosa, Modesto, Calif. Meat scraper. 2,437,316, Mar. 9.

Garnett, Edward O., Colbyn, Pretoria, Transvaal, Union of South Africa. Machine for forming curved surfaces. 2,437,596, Mar. 9.

Garrison, Allen D., Houston, Tex., assignor to Texaco Development Corporation, New York, N. Y. Treatment of drilling fluids. 2,437,297, Mar. 9.

Gee, Norman E., Narberth, Pa. Sanding device for railway rolling stock. 2,437,384, Mar. 9.

Geigy, J. R., A.-G., assignee: *See*—
Martin, Henry, and Häfliger.

General Electric Company, assignee: *See*—
D'Alelio, Gaetano F.
Burkhard, Charles A., and Patnode.
Gethman, Richard B.
Seaver, John D.
Van Amburg, Otto H., and Pistey.

General Sales Company of Cadillac, assignee: *See*—
Greeley, Leo O.

General Spring Corporation, assignee: *See*—
Wood, Joseph K.

Gerhold, Clarence G.: *See*—
Brown, Kenneth M., and Gerhold.

Gerondale, John J., assignor of one-half to V. K. Stanley, Detroit, Mich. Cigaret dispenser. 2,437,464, Mar. 9.

Gethmann, Richard B., Bridgeport, Conn., assignor to General Electric Company. Deflection coil and yoke for cathode ray tubes. 2,437,513, Mar. 9.

Gibney, Jane: *See*—
Donaldson, Eleanor, and Gibney.

Gil, Irving: *See*—
Rockola, David C., and Gil.

Gilron Products Company, assignee: *See*—
Orozco, Gilbert H.

Giordano, Salvatore, Maspeth, Long Island, N. Y. Handbag frame assembly. 2,437,597, Mar. 9.

Givens, Glenn G., Newport News, Va. Tool for cutting insulation on electric conductors. 2,437,514, Mar. 9.

Gliwa, Michael, Chicago, Ill. Auxiliary propeller for airships and housing therefor. 2,437,353, Mar. 9.

Glocker, Eugenie, administratrix: *See*—
Glocker, Gustave.

Glocker, Gustave, deceased; E. Glocker, administratrix, assignor to Super-Seal Container Corporation, Washington, D. C. Container closure. 2,437,515, Mar. 9.

Goldberg, Harry H., Denver, Colo. Joint for metal window frames. 2,437,598, Mar. 9.

Golick, Joseph: *See*—
Briskin, Theodore S. and J., and Golick.

Goodhue, William V., Ipswich, and J. P. Norton, Beverly, Mass., assignors to United Shoe Machinery Corporation, Flemington, N. J. Ammunition container. 2,437,425, Mar. 9.

Goodings, Eric P., and M. A. T. Rogers, Blackley, Manchester, England, assignors to Imperial Chemical Industries Limited. Manufacture of new coloring matters. 2,437,465, Mar. 9.

Goodman, Samuel R., Jr., Temple, Tex. Pedal attachment. 2,437,320, Mar. 9.

Gostkowski, Bedri H., assignor to Universal Lighters Selling Company Ltd., Geneva, Switzerland. Pocket lighter. 2,437,354, Mar. 9.

Gould, George K., Brooklyn, N. Y. Movie projcetor control device. 2,437,252, Mar. 9.

Greeley, Leo O., assignor to General Sales Company of Cadillac, Cadillac, Mich. Grinding wheel dresser. 2,437,599, Mar. 9.

Greenlee, Harry R., Indianapolis, assignor to The Studebaker Corporation, South Bend, Ind. Transmission. 2,437,517, Mar. 9.

Greenslade, Grover R., Scott Township, Allegheny County, assignor to Flannery Bolt Company, Bridgeville, Pa. Indicating dial for resistance apparatus. 2,437,355, Mar. 9.

Greiner, Carl F.: *See*—
Harrison, John F., and Greiner.

Greppin, Ernest H., assignor to Wilmot Castle Company, Rochester, N. Y. Dental operating lamp construction. 2,437,516, Mar. 9.

Gresham, William F., R. E. Brooks, and W. M. Bruner, assignors to E. I. du Pont de Nemours & Company, Wilmington, Del. Synthesis of aldehydes. 2,437,600. Mar. 9.

Grinnell Corporation, assignee: *See*—
Welshman, James R.

Griscom-Russell Company, The, assignee: *See*—
Bruegger, Ernest.

Grönwall, Anders J. T., and B. G.-A. Ingelman, Uppsala, assignors to Aktiebolaget Pharmacia, Stockholm, Sweden. Manufacture of infusion and injection fluids. 2,437,518, Mar. 9.

Gulles, Charles H.: *See*—
Skene, Matthew, and Gulles.

Guinot, Henri M., Versailles, and P. Chassaing, Melle, assignors to Les Usines De Melle (Societe Anonyme) Saint-Leger-les-Melle, France. Manufacture of anhydrous aliphatic acids from aqueous solutions thereof. 2,437,519, Mar. 9.

Gunning, Maximilliaan F., Petersfield, England. Hydraulic plant. 2,437,520, Mar. 9.

Gustavson, Alvin N., assignor to Automatic Voting Machine Corporation, Jamestown, N. Y. Voting machine. 2,437,521, Mar. 9.

Guthrie, Marion R., assignee: *See*—
Smith, Leicester I.

Hadley, Wilfred N., assignor to Parks and Woolson Machine Company, Springfield, Vt. Slitting and punching attachment for piece-end sewing machines. 2,437,662, Mar. 9.

Häfliger, Franz: *See*—
Martin, Henry, and Häfliger.

Hahn, Clarence L., Baltimore, Md. Artificial bait. 2,437,523, Mar. 9.

Hall, Emerson, Lafayette, Calif. Hydraulic hoisting mechanism. 2,437,466, Mar. 9.

Halford, Frank B., assignor to The De Havilland Aircraft Company Limited, Edgware, England. Jet propulsion plant. 2,437,385, Mar. 9.

Hamlet, Darrel P., assignor to Continental Coffee Company, Chicago, Ill. Fluid mixing device. 2,437,601, Mar. 9.

Handler, Harry, assignor of one-half to N. Dworkin, Brooklyn, N. Y. Spotlight. 2,437,522, Mar. 9.

Hann, Kenneth G., Brean, Wales, assignor of one-half to Elliott Equipment Limited, Cardiff, England. Inflatable article. 2,437,602, Mar. 9.

Harper, Kennard W.: *See*—
Peck, William F., Harper, and Estey.

Harrison, John F., and C. F. Greiner, assignors to The Buffalo-Springfield Roller Co., Springfield, Ohio. Self-propelled tamping roller. 2,437,524, Mar. 9.

Harvel, Velma C., Fort Worth, Tex. Crocheted hat and producing the same. 2,437,525, Mar. 9.

Hawkins, Fred R., Waterford, Calif. Automatic coupling, decoupling, and adjusting hitch. 2,437,321, Mar. 9.

Haynes, James D., Kilgore, Tex., assignor to The Dow Chemical Company, Midland, Mich. Device for depositing material in well holes. 2,437,663, Mar. 9.

Hazeltine Research, Inc., assignee: *See*—
Anderson, Theodore G.

Hedding, Linnie K., Wilkinsburg, assignor to The Union Switch & Signal Company, Swissvale, Pa. Electrical rectifier. 2,437,322, Mar. 9.

Hedrick, Charles E., Sr., Alexandria, Va. Strip of severable reinforcing tabs for loose-leaf sheets. 2,437,640, Mar. 9.

Heldbrink, Jay A., Minneapolis, and C. G. Herrick, Hopkins, Minn., assignors to Air Reduction Company, Incorporated, New York, N. Y. Humidifying oxygen. 2,437,526, Mar. 9.

Helgi, John J., Cranford, and J. A. Wilson, Linden, N. J., assignors to Standard Oil Development Company. Apparatus for instantaneously indicating on an oscilloscope screen the absorption spectrum of a substance. 2,437,323, Mar. 9.

Hein, Robert O., Lincolnwood, Ill. Honing and filing device. 2,437,641, Mar. 9.

Henderson, Lloyd F., and B. L. Maxwell, Reading, Mass., assignors to Lever Brothers Company. Detergent composition. 2,437,253, Mar. 9.

Henroteau, Francois C. P., Liege, Belgium. Spectacles. 2,437,642, Mar. 9.

Hercules Powder Company, assignee: *See*—
Rummelsburg, Alfred L.

Hermann, Clare E.: *See*—
Murray, Earl F., and Hermann.

Herrick, Clinton G.: *See*—
Heldbrink, Jay A., and Herrick.

Herring, Earl R., and C. P. Sander, Glendale, Calif., assignors to Kinner Motors, Inc. Variable-speed drive for propellers. 2,437,467, Mar. 9.

Hess, George R., Washington, D. C. Tool handle fastening. 2,437,426, Mar. 9.

Hester, William F., Drexel Hill, and W. E. Craig, assignors to Röhm & Haas Company, Philadelphia, Pa. Insecticidal compositions comprising a phenyl ester of caprylphenoxyacetic acid. 2,437,427, Mar. 9.

Hester, William F., Drexel Hill, and W. E. Craig, assignors to Röhm & Haas Company, Philadelphia, Pa. Insecticidal compositions from halocaprylphenoxyacetic acid. 2,437,527, Mar. 9.

Heyman, Fannie R., New York, N. Y. Comb accessory. 2,437,298, Mar. 9.

Hicks, Harold A., Detroit, assignor to Chrysler Corporation, Highland Park, Mich. Vehicle windshield construction. 2,437,664, Mar. 9.

Hill, John S., assignor to Masonite Corporation, Laurel, Miss. Drum drier for sheet material. 2,437,254, Mar. 9.

Hill, Philip, Hammond, Ind., assignor to Standard Oil Company, Chicago, Ill. Catalytic alkylation of aromatic hydrocarbons by long chain olefins. 2,437,356, Mar. 9.

Hochron, Milton, New York, N. Y. Collapsible cart. 2,437,386, Mar. 9.

Hodgson, Ronald M., London, England. Hardening of soil and the like. 2,437,387, Mar. 9.

Hodil, Ralph W., near Toledo, assignor to Surface Combustion Corporation, Toledo, Ohio. High temperature cleaning of steel strip including removing ferrous chloride therefrom. 2,437,528, Mar. 9.

Hofmann, Corris M.: *See*—
Lecher, Hans Z., Parker, and Hofmann.

Hogan, John V. L., Forest Hills, and H. C. Ressler, Bayside, assignors to Faximile, Inc., New York, N. Y. Graphic privacy system. 2,437,255, Mar. 9.

Hollis, Thomas R.: *See*—
Cooklin, Leonard, and Hollis.

Holloway, John H., assignor to Northwest Engineering Company, Green Bay, Wis. Fuel injector. 2,437,529, Mar. 9.

Holt, Pliny G., U. S. Navy. Auxiliary control mechanism for automatic pilot. 2,437,256, Mar. 9.

Homeyer, August H., Webster Groves, assignor to Mallinckrodt Chemical Works, St. Louis, Mo. 2-oxazolidone compounds and preparing the same. 2,437,388, Mar. 9.

Homeyer, August H., Webster Groves, assignor to Mallinckrodt Chemical Works, St. Louis, Mo. Oxazolidones and making the same. 2,437,389, Mar. 9.

Homeyer, August H., Webster Groves, assignor to Mallinckrodt Chemical Works, St. Louis, Mo. 2-oxazolidone compounds and preparing the same. 2,437,390, Mar. 9.

Honorary Advisory Council for Scientific and Industrial Research, The, assignee: *See*—
Frye, Frederick E. J., and Pollard.

Hoopes, Penrose R., Philadelphia, Pa., assignor to Super Speed Press Corporation, Bridgeton, N. J. Effecting reciprocatory motion. 2,437,530, Mar. 9.

Hornbostel, John, Glen Ridge, assignor to Thomas A. Edison, Incorporated, West Orange, N. J. Electric motor system and controlling the same. 2,437,428, Mar. 9.

Horney, Amos G.: *See*—
Vance, Robert M., and Horney.

Hornfeck, Anthony J., Cleveland Heights, Ohio, assignor to Bailey Meter Company. Machine tool control. 2,437,603, Mar. 9.

Hossfeld, Albert, deceased, Winona, Minn.; The Merchants National Bank of Winona, administrator. Buffer spring device for drilling machines. 2,437,429, Mar. 9.

Hotpoint Inc., assignee: *See*—
Rees, Gregory L.

Houpt, Alfred G., Springdale, Conn., assignor to American Cyanamid Company, New York, N. Y. Separation of neutral fat from tall oil. 2,437,643, Mar. 9.

Huffman, Hal C., Long Beach, assignor to Union Oil Company of California, Los Angeles, Calif. Catalytic treatment of hydrocarbons. 2,437,531, Mar. 9.

Huffman, Hal C., Long Beach, assignor to Union Oil Company of California, Los Angeles, Calif. Catalytic reforming of hydrocarbons. 2,437,532, Mar. 9.

Huffman, Hal C., Long Beach, assignor to Union Oil Company of California, Los Angeles, Calif. Catalysts. 2,437,533, Mar. 9.

Hufford, Lewis C., Manhattan Beach, Calif. Decoy. 2,437,604, Mar. 9.

Hunter, Rutherford H., Wooster, Ohio. Temperature control system. 2,437,468, Mar. 9.

Iavelli, Teno: *See*—
Matulaitis, Victor E., and Iavelli.

Imperial Chemical Industries Limited, assignee: *See*—
Goodings, Eric P., and Rogers.

Ingelman, Björn G.-A.: *See*—
Grönwall, Anders J. T., and Ingelman.

Jackler, Morris, Brooklyn, N. Y. Pocketbook having all exposed surfaces finished. 2,437,534, Mar. 9.

Jacobi, Edward N., assignor to Briggs & Stratton Corporation, Milwaukee, Wis. Lock device. 2,437,299, Mar. 9.

Jefferson, Glen V.: *See*—
McWhirter, William C., and Jefferson.

Jenkins, Alexander: *See*—
Thompson, Leslie E., and Jenkins.

Jenkins, Herbert E., Indianapolis, Ind. Bedspring support. 2,437,535, Mar. 9.

Jensen, Lawrence R.: *See*—
Moyer, Stanley H., and Jensen.

Johnson, Clarence L., Encino, and R. R. Richolt, Tujunga, assignors to Lockheed Aircraft Corporation, Burbank, Calif. Booster type servomotor system. 2,437,536, Mar. 9.

Johnson, Herman K., Grand Haven, Mich., assignor to The Bastian-Blessing Company, Chicago, Ill. Refrigerator and maintaining the compartments thereof at different temperatures. 2,437,257, Mar. 9.

Jones, Franklin D., Llanerch, assignor to American Chemical Paint Company, Ambler, Pa. Isoprene esters. 2,437,258, Mar. 9.

Jones & Laughlin Steel Corporation, assignee: *See*—
Kaufman, George A.

Karge, Maxwell R., Brockport, N. Y. Coolant supplying mechanism for machine tools. 2,437,605, Mar. 9.

Kaufman, George A., Aliquippa, assignor to Jones & Laughlin Steel Corporation, Pittsburgh, Pa. Method and apparatus for oiling sheet metal. 2,437,606, Mar. 9.

Kautz, Frederick, Philadelphia, Pa. Forming plates for runways in spiral chutes and the like. 2,437,259, Mar. 9.

Kelleher, Daniel, Berea, assignor to I. Saks, Cleveland, Ohio. Clutch plate. 2,437,537, Mar. 9.

Kelly, John H., Jr., Oak Park, assignor to Dryden Rubber Company, Chicago, Ill. Rubber compositions containing octadecane nitrile. 2,437,538, Mar. 9.

Kieley & Mueller, Inc., assignee: *See*—
Quiroz, Francisco A.

King, John P., Pawtucket, R. I., assignor to Smith-King Company. Yarn guide for braider carriers. 2,437,539, Mar. 9.

Kinner Motors, Inc., assignee: *See*—
Herring, Earl R., and Sander.

Kirchoff, Elden L., Hawthorne, Calif. Helicopter steering surface control. 2,437,324, Mar. 9.

Klaucke, Hermann, Worcester, Mass., assignor to Chain Belt Company, Milwaukee, Wis. Variable speed transmission. 2,437,540, Mar. 9.

Klein, Victor G., and R. F. Schneller, assignors to Lincoln Engineering Company, St. Louis, Mo. Quick-acting valve mechanism for actuating the distributing valve of an expansible chamber motor. 2,437,391, Mar. 9.

Kobernick, Sergius T., Upper Darby, Pa. Automobile control mechanism. 2,437,260, Mar. 9.

Koci, Ludvik J., assignor to Sunbeam Corporation, Chicago, Ill. Synchronous driving apparatus. 2,437,392, Mar. 9.

Koeppel, Vernon E., Cato, Wis. Traction lug for automotive vehicles. 2,437,325. Mar. 9.

Koret, Stephaine D., San Francisco, Calif. Halter (for women). 2,437,541, Mar. 9.

Kramer, Lester F., Enumclaw, Wash. Weed puller. 2,437,393, Mar. 9.

Krippendorf, Louis H., White Plains, assignor to American Catheter Corporation, Port Chester, N. Y. Catheter-type instrument. 2,437,542, Mar. 9.

Kuchar, Joseph, Chicago, Ill. Hitch. 2,437,607, Mar. 9.

LFC Corporation, assignee: *See*—
Crumrine, Chester W.

Labin, Emile, assignor to Federal Telephone and Radio Corporation, New York, N. Y. Television and sound transmitting system. 2,437,300, Mar. 9.

Lachmund, Julius, San Francisco, Calif. Parallel ruler. 2,437,469, Mar. 9.

La Rosa, Nate: *See*—
Gambino, Nate, and La Rosa.

Lawrence, Frank L., Vancouver, British Columbia, Canada. Hydraulic clutch control. 2,437,430, Mar. 9.

Lecher, Hans Z., Plainfield, R. P. Parker, Somerville, and C. M. Hofmann, Bound Brook, N. J., assignors to American Cyanamid Company, New York, N. Y. Sulfofluorides of azoic dyestuffs. 2,437,644, Mar. 9.

Le Clair, Camille C. S., Acton, London, England. Pipe joint. 2,437,543, Mar. 9.

Legatski, Harold R., Bartlesville, Okla., assignor to Phillips Petroleum Company. Catalytic isomerization of hydrocarbon vapors in the presence of a metal-halide catalyst. 2,437,394, Mar. 9.

Leonard, Robert W.: *See*—
Watson, Norman A., Veneklasen, Leonard, and Gales.

Lerner, Louis L., assignor to Consolidated Royal Chemical Corporation, Chicago, Ill. Condensation products of cholesteryl esters with polyethylene glycol and producing same. 2,437,261, Mar. 9.

Les Usines De Melle (Societe Anonyme), assignee: *See*—
Guinot, Henri M., and Chassaing.

Lever Brothers Company, assignee: *See*—
Henderson, Lloyd F., and Maxwell.

Levitt, Percy B., Millburn, and J. D. Morgan, South Orange, N. J., assignors to Cities Service Oil Company, New York, N. Y. Electric heater thermostatic switch control. 2,437,262, Mar. 9.

Lewis, Charles E.: *See*—
Long, Robert S., and Lewis.

Lewis, Lloyd V., Pittsburgh, assignor to The Union Switch & Signal Company, Swissvale, Pa. Remote control system. 2,437,326, Mar. 9.

Liberty, George W., South Lynnfield, assignor to National Development Company, Lynn, Mass. Inking and edge setting machine. 2,437,431, Mar. 9.

Lichtenstein, Hans J.: *See*—
Tuerck, Karl H. W., and Lichtenstein.

Lincoln Engineering Company, assignee: *See*—
Klein, Victor G., and Schneller.

Lobosco, Roscoe R., Elizabeth, N. J., assignor to Union Carbide and Carbon Corporation. Speed governor. 2,437,301, Mar. 9.

Lockheed Aircraft Corporation, assignee: *See*—
Johnson, Clarence L., and Richolt.
Meripol, Edward B.

Loeb, William S., assignee: *See*—
Aber, Joseph S.

Logemann, Willy: *See*—
Serini, Arthur, and Logemann.

Long, John H., New York, and W. Lupish, New Hyde Park, N. Y., assignors to the United States of America, as represented by the Secretary of Navy. Coaxial optical system for displacement gauges. 2,437,608, Mar. 9.

Long, Robert S., and C. E. Lewis, Somerville, N. J., assignors to American Cyanamid Company, New York, N. Y. Metal complexes of pyrazolone azo dyestuffs. 2,437,645, Mar. 9.

Loumiet et Lavigne, Jean, Itabo, Cuba. Regulating steam generators and automatic feed systems for such generators. 2,437,327, Mar. 9.

Lupish, Walter: *See*—
Long, John H., and Lupish.

Lynch Package Machinery Corporation, assignee: *See*—
Sandberg, Oscar.

Magnusson, Folke G. R., Stockholm, and G. V. Oholm, Nockeby, Sweden. Apparatus for treating granular materials. 2,437,395, Mar. 9.

Mallinckrodt Chemical Works, assignee: *See*—
Homeyer, August H.

Manning, Fred W., Palo Alto, Calif. Method and apparatus for the production of filaments from solids. 2,437,263, Mar. 9.

Manning, Fred W., Palo Alto, Calif. Magazine spinning gun for the production of filaments and fabrics. 2,437,264, Mar. 9.

Manning, Fred W., Palo Alto, Calif. Tampon, sanitary napkin, surgical dressing, insulating material, filter cartridge, upholstery, and the like. 2,437,265, Mar. 9.

Manufacturers Machine & Tool Co., Inc., assignee: *See*—
Boecking, Ewald.

Marisic, Milton M., Northfield, assignor to The Pure Oil Company, Chicago, Ill. Hydrofluoric acid alkylation process. 2,437,544, Mar. 9.

Marrison, Warren A., Maplewood, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Translating device. 2,437,266, Mar. 9.

Marshall Field and Company, assignee: *See*—
Clark, Eugene F.

Martin, Henry, and F. Häfliger, assignors to J. R. Geigy A.-G., Basel, Switzerland. Basic amides of 1-arylcycloalkyl-1-carboxylic acids. 2,437,545, Mar. 9.

Martines, Rene, Cranston, R. I. Tool. 2,437,432, Mar. 9.

Masonite Corporation, assignee: *See*—
Hill, John S.

Matulaitis, Victor E., and T. Iavelli, Detroit, assignors to Chrysler Corporation, Highland Park, Mich. Turret traversing mechanism. 2,437,646, Mar. 9.

Maurer, J. A., Inc., assignee: *See*—
Maurer, John A., Jr.

Maurer, John A., Jr., assignor to J. A. Maurer, Inc., New York, N. Y. Impulse recording optical system. 2,437,470, Mar. 9.

Maxim Silencer Company, The, assignee: *See*—
Bourne, Roland B.

Maxon, Glenway, Jr., assignor to The T. L. Smith Company, Milwaukee, Wis. Concrete mixing plant. 2,437,302, Mar. 9.

Maxwell, Bernard L.: *See*—
Henderson, Lloyd F., and Maxwell.

Mayle, Louis F., Fort Wayne, Ind., assignor, by mesne assignments, to Farnsworth Research Corporation. Frequency comparison apparatus. 2,437,609, Mar. 9.

Mayrath, Thomas L., Dodge City, Kans. Sliding jaw wrench with oppositely-threaded screw adjustment. 2,437,267, Mar. 9.

McBride, Edward J., assignee: *See*—
Moore, William E.

McCarthy, Charles S., Birmingham, assignor to American Forging and Socket Company, Pontiac, Mich. Brake applying mechanism. 2,437,396, Mar. 9.

McCord Corporation, assignee: *See*—
Urso, Ralph F.

McDonald, Eugene F., Jr., Chicago, Ill. Combined dial scale, switch operator, and position indicator. 2,437,610, Mar. 9.

McKinnis, Art C., Long Beach, assignor to Union Oil Company of California, Los Angeles, Calif. Solvent extraction of hydrocarbons. 2,437,357, Mar. 9.

McLean, Robert E., Fort Benning, Ga. Takedown type wall brackets. 2,437,647, Mar. 9.

McLemore, Price C., Montgomery, Ala., assignor to Delinted Seed Company. Delinting cotton seed. 2,437,397, Mar. 9.

McMullen, Doyle E.: *See*—
Pickett, Ernest W., Jr., and McMullen.

McNair, Eric P., Mattoon, Ill. Cable bending pliers. 2,437,433, Mar. 9.

McWhirter, William C., Wilkinsburg, and G. V. Jefferson, Edgewood, assignors to The Union Switch & Signal Company, Swissvale, Pa. Electric switch lock. 2,437,328, Mar. 9.

Merchants National Bank of Winona, administrator: *See*—
Hossfeld, Albert.

Merck & Co., Inc., assignee: *See*—
Conn, John B.

Meripol, Edward B., Los Angeles, assignor to Lockheed Aircraft Corporation, Burbank, Calif. Supercharged engine control. 2,437,546, Mar. 9.

Metron Instrument Company, assignee: *See*—
Floyd, Frederick K.

Milas, Nicholas A., Belmont, Mass., assignor to Research Corporation, New York, N. Y. Catalytic oxidation of unsaturated organic compounds. 2,437,648, Mar. 9.

Miller, Stewart E., Jackson Heights, assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Intermittently operating automatic frequency control. 2,437,268, Mar. 9.

Milner, David W., Leeds, assignor to Yorkshire Tar Distillers Limited, Barnsley, England. Separation of phenols from hydrocarbon distillates by steam distillation. 2,437,649, Mar. 9.

Minneapolis-Honeywell Regulator Company, assignee: *See*—
Field, William J.
Newton, Alwin B.

Mojonnier Bros. Co., assignee: *See*—
Mojonnier, Oliver W.

Mojonnier, Oliver W., River Forest, Ill., assignor to Mojonnier Bros. Co. Buffing machine. 2,437,398, Mar. 9.

Mojonnier, Oliver W., River Forest, Ill., assignor to Mojonnier Bros. Co. Buffing machine. 2,437,434, Mar. 9.

Molla, Charles P., New Hyde Park, N. Y. Knockdown metal chair. 2,437,303, Mar. 9.

Molla, Charles P., New Hyde Park, N. Y. Knockdown wrought iron chair. 2,437,304, Mar. 9.

Monroe Calculating Machine Company, assignee: *See*—
Crosman, Loring P.

Moore, Frederick J., Los Angeles, Calif., assignor to the United States, as represented by the Secretary of War. Surgical instrument for curetting. 2,437,329, Mar. 9.

Moore, William E., assignor to E. J. McBride, Philadelphia, Pa. Articulated bobbin holder. 2,437,471, Mar. 9.

Morgan, James F., Orlando, Fla. Multiple air screw driven from a common shaft. 2,437,399, Mar. 9.

Morgan, John D.: *See*—
Levitt, Percy B., and Morgan.

Morrison, Montford, Upper Montclair, N. J. Electric motor speed controller. 2,437,611, Mar. 9.

Mowery, Ralph N., Yakima, Wash. Cable splice. 2,437,358, Mar. 9.

Moyer, Stanley H., San Francisco, Calif., and L. R. Jensen, Salt Lake City, Utah. Flush tank. 2,437,435, Mar. 9.

Moynihan, John J., Chicago, Ill., assignor of one-half to J. B. Brennan, Euclid, Ohio. Method of and apparatus for roentgenographic inspection. 2,437,472, Mar. 9.

Mullen, John E., Cambridge, Mass. Making plastic contact lenses. 2,437,436, Mar. 9.

Mulligardt, Alexander S., Altadena, Calif. Variable incidence wing control for aircraft of the rotary wing or airplane sustained type. 2,437,330, Mar. 9.

Munsingwear, Inc., assignee: *See*—
Donaldson, Eleanor, and Gibney.

Murray, Earl F., and C. E. Hermann, Minneapolis, Minn. Fish stringer. 2,437,331, Mar. 9.

Nardone, Romeo M., Teaneck, assignor to Bendix Aviation Corporation, Teterboro, N. J. Engine starting mechanism. 2,437,400, Mar. 9.

National Blank Book Company, assignee: *See*—
Schade, John.

National Development Company, assignee: *See*—
Liberty, George W.

National-Simplex-Bludworth, Inc., assignee: *See*—
Bludworth, Timothy F.

Navy, United States of America, as represented by the Secretary of the, assignee: *See*—
Long, John H., and Lupish.
Salisbury, Winfield W.

Nelson, Hulda C., Pittsburgh, Pa. Trousers hanger and creaser. 2,437,437, Mar. 9.

Newton, Alwin B., assignor to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn. Low-temperature test chamber. 2,437,332, Mar. 9.

New Wrinkle, Inc., assignee: *See*—
Waidle, William A.

Nickle, Arthur G., Saginaw, Mich. Retaining means for setscrews in bearing inner races. 2,437,305, Mar. 9.

Niles-Bement-Pond Company, assignee: *See*—
Chandler, Milton E.

Nilson, Carl E. J., Storgatan, Angelholm, Sweden. Time controlling mechanism. 2,437,401, Mar. 9.

Nitralloy Corporation, The, assignee: *See*—
Floe, Carl F.

Northwest Engineering Company, assignee: *See*—
Holloway, John H.

Norton, James P.: *See*—
Goodhue, William V., and Norton.

Null, George W., assignee: *See*—
Simons, Edward W.

Ogden, William L. W., Baltimore, Md., and W. R. Ryan, Fairfield, Conn., assignors to Bendix Aviation Corporation, South Bend, Ind. Pressure switch. 2,437,473, Mar. 9.

Ohl, Russell S., Red Bank, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Translating device and making it. 2,437,269, Mar. 9.

Oholm, Gustav V.: *See*—
Magnusson, Folke G. R., and Öholm.

Olsen, Thorsten Y., assignee: *See*—
Sundby, Harold C.

Orozco, Gilbert H., Euclid, assignor to G. H. Orozco and R. A. Whitbeck, partners doing business as Gilron Products Company, Cleveland, Ohio. Anodic cleaning. 2,437,474, Mar. 9.

Osborg, Hans, Port Washington, N. Y. Electrolytically zinc plating magnesium and magnesium base alloys. 2,437,612, Mar. 9.

Oxford, William F., Jr., Beaumont, Tex., assignor to Sun Oil Company, Philadelphia, Pa. Method of mitigating corrosion in wells. 2,437,475, Mar. 9.

Palmer, L. H., Childersburg, Ala. Abrading tool. 2,437,650, Mar. 9.

Palmer, Orion R., Jr., Beverly Hills, Calif. Vibrator attachment for electric razor actuating instruments. 2,437,402, Mar. 9.

Parker Appliance Company, The, assignee: *See*—
Wolfram, John N.

Parker, Herbert M., Oak Ridge, Tenn., assignor to the United States of America, as represented by the Atomic Energy Commission. Differential twin chamber neutron meter. 2,437,476, Mar. 9.

Parker, Robert P.: *See*—
Lecher, Hans Z., Parker, and Hofmann.

Parkerton, Madeline J.: *See*—
Schottgen, Louis, and Parkerton.

Parkin, Leslie, and J. Simpson, Nottingham, England. Manufacture of articles from short lengths of tubes. 2,437,477, Mar. 9.

Parks and Woolson Machine Company, assignee: *See*—
Hadley, Wilfred N.

Patchett, George W., Chigwell, England. Telescopic firearm. 2,437,548, Mar. 9.

Patnode, Winton I. *See*—
Burkhard, Charles A., and Patnode.

Pecher, Lawrence H., Akron, Ohio. Artificial bait. 2,437,549, Mar. 9.

Peck, William F., Buffalo, and K. W. Harper, East Aurora, N. Y., and R. S. Estey, Arlington, Va., assignors, by mesne assignments, to American Optical Company, Southbridge, Mass. Actuating means for colorimetric apparatus. 2,437,550, Mar. 9.

Peck, Robert L., Jr., Short Hills, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Magnetostrictive compressional wave transmitter or receiver. 2,437,270, Mar. 9.

Penn Electric Switch Co., assignee: *See*—
Penn, Ralph.

Penn, Ralph, assignor to Penn Electric Switch Co., Goshen, Ind. Automatic control system. 2,437,551, Mar. 9.

Petroff, Sergius, and A. E. Prats, Manila, P. I. Producing gasoline and other hydrocarbons from coconut oil and related animal and vegetable oils and fats. 2,437,438, Mar. 9.

Philco Corporation, assignee: *See*—
Ames, Millard E., Jr., and Sunstein.

Phillips Petroleum Company, assignee: *See*—
Bottenberg, Kenneth C., and Richardson.
Legatski, Harold R.

Pickett, Ernest W., Jr., Liberty, and D. E. McMullen, Tex.; assignors of sixty-two per cent to said Pickett, and thirty-eight per cent to said McMullen. Garment cleaning machine. 2,437,478, Mar. 9.

Pierce, Raymond C., Chicago, Ill. Snubbed truck. 2,437,359, Mar. 9.

Pistey, John M.: *See*—
Van Amburg, Otto H., and Pistey.

Plessey Company, The, assignee: *See*—
Pugh, Cyril A., Booth, and Rough.

Plibrico Jointless Firebrick Company, assignee: *See*—
Anderson, John E.

Pollard, Eber: *See*—
Frye, Frederick E. J., and Pollard.

Pollard, Willard L., Evanston, Ill. Transmission. 2,437,333, Mar. 9.

Porcelain Insulator Corporation, The, assignee: *See*—
Rowland Davidge H.

Prats, Anthony E.: *See*—
Petroff, Sergius, and Prats.

Premier Crystal Laboratories, Inc., assignee: *See*—
Bach, Henry M.

Price, Edwin C., Newburgh, N. Y. Vehicle loading ramp. 2,437,479, Mar. 9.

Pro-phy-lac-tic Brush Company, assignee: *See*—
D'Alello, Gaetano F.

Pugh, Cyril A., and D. G. Booth, Ilford, and R. W. Rough, Romford, assignors to The Plessey Company Limited, Ilford, England. Valve. 2,437,480, Mar. 9.

Puls, Herman: *See*—
Raskin, Archie, Fox, and Puls.

Pure Oil Company, The, assignee: *See*—
Marisic, Milton M.

Purvis, Judson A., Chicago, Ill. Loose-leaf binder. 2,437,360, Mar. 9.

Quiroz, Francisco A., Newark, assignor to Kieley & Mueller, Inc., North Bergen, N. J. Valve construction. 2,437,552, Mar. 9.

Rackett, Gerald F., Los Angeles, assignor to Technicolor Motion Picture Corporation, Hollywood, Calif. Film registering apparatus. 2,437,361, Mar. 9.

Radio Corporation of America, assignee: *See*—
Bedford, Alda V.

Rambusch Decorating Company, assignee: *See*—
Ferlin, Paul E., and Rambusch.

Rambusch, Edward: *See*—
Ferlin, Paul E., and Rambusch.

Ramsay, Martin, Houston, Tex. Radio dial display device. 2,437,306, Mar. 9.

Raskin, Archie, Englewood, N. J., and I. Fox and H. Puls, New York, N. Y. Motion-picture film control device. 2,437,553, Mar. 9.

Rasmussen, Christian O., Copenhagen, Denmark. Laundry centrifugal. 2,437,651, Mar. 9.

Ratti, Roger, Neu-Allschwil near Basel, and P. Brandt, Basel, assignors to Durand & Huguenin S. A. Basel, Switzerland. Dyestuff preparations containing an acid ester salt of a leuco vat dyestuff, a water-soluble acid amide and a salt of a quaternary amino acid. 2,437,554, Mar. 9.

Raytheon Manufacturing Company, assignee: *See*—
Brown, William C.
Spencer, Percy L.

Records, Elmer H., Tacoma, Wash. Converting petroleum crudes. 2,437,439, Mar. 9.

Reddick, Rupert R., Oakland, Calif. Welding rod holder. 2,437,652, Mar. 9.

Redpath, Mathew V., near Columbiana, Ohio. Electric fence insulator. 2,437,613, Mar. 9.

Rees, Gregory L., Hinsdale, Ill., assignor to Hotpoint Inc. Push button switch. 2,437,555, Mar. 9.

Research Corporation, assignee: *See*—
Milas, Nicholas A.

Ressler, Hugh C.: *See*—
Hogan, John V. L., and Ressler.

Revere Camera Company, assignee: *See*—
Briskin, Theodore S. and J., and Golick.

Rhodes, M. H., Inc., assignee: *See*—
Rhodes, Marcus H.

Rhodes, Marcus H., assignor to M. H. Rhodes, Inc., Hartford, Conn. Timing device. 2,437,556, Mar. 9.

Rice, Charles J., Bexleyheath, England. Fastening and holding device for doors, gates, and the like. 2,437,403, Mar. 9.

Rice, Henry W., East Boothbay, Maine. Centerboard installation. 2,437,271, Mar. 9.

Rich, Everett W., San Diego, Calif. Valve-in-head rotary internal-combustion engine embodying a rotary piston with radial sliding vanes and having a combustion chamber in the head. 2,437,653, Mar. 9.

Richardson, James A.: *See*—
Bottenberg, Kenneth C., and Richardson.

Richey, Clarence B., assignor to Electric Wheel Company, Quincy, Ill. Scoop board for vehicle boxes. 2,437,614, Mar. 9.

Richolt, Robert R.: *See*—
Johnson, Clarence L., and Richolt.

Rigden, Duncan L., Oakland, Calif. Balanced pressure gage and switch. 2,437,440, Mar. 9.

Roadless Traction Limited, assignee: *See*—
Tripp, Leonard W.

Robinson, Albert P., Seattle, Wash. Golf club grips. 2,437,404, Mar. 9.

Robinson, Albert P., Seattle, Wash. Carrying device. 2,437,405, Mar. 9.

Robinson, Richard S., Gloucester, Mass., assignor to Allied Chemical & Dye Corporation. Production of alkali metal methylates. 2,437,272, Mar. 9.

Rockoff, Joseph, Dayton, Ohio, assignor to The Dayton Rubber Company. Top spinning roller. 2,437,362, Mar. 9.

Rockola, David C., and I. Gil, assignors, by mesne assignments, to Rock-Ola Manufacturing Corporation, Chicago, Ill. Phonographic apparatus. 2,437,557, Mar. 9.

Rock-Ola Manufacturing Corporation, assignee: *See*—
Rockola, David C., and Gil.

Rockwood, Edgar L., Berkeley, Calif. Precision radio remote control system. 2,437,558, Mar. 9.

Roethell, Bruno E., Cranford, N. J., assignor to Standard Oil Development Company. Controlling chemical reactions. 2,437,334, Mar. 9.

Rogers, Leonard M., Mendon, assignor to Draper Corporation, Hopedale, Mass. Loom stop motion. 2,437,406, Mar. 9.

Rogers, Linnaeus J., assignor to Associated Chemical Company of Canada Limited, Toronto, Ontario, Canada. Coloring metal surfaces. 2,437,441, Mar. 9.

Rogers, Maurice A. T.: *See*—
Goodings, Eric P., and Rogers.

Röhm & Haas Company, assignee: *See*—
Hester, William F., and Craig.

Rose, James, assignor to L. Rose, Davenport, Iowa. Kitchen cabinet. 2,437,665, Mar. 9.

Rose, Luella, assignee: *See*—
Rose, James.

Rosner, Irving, assignor to Even-Pul Foundations, Inc., New York, N. Y. Foundation garment. 2,437,654, Mar. 9.

Rosner, Irving, Forest Hills, assignor to Even-Pul Foundations, Inc., New York, N. Y. Brassière. 2,437,655, Mar. 9.

Rough, Rudolph W.: *See*—
Pugh, Cyril A., Booth, and Rough.

Rowland, Davidge H., Brighton, assignor to The Porcelain Insulator Corporation, Lima, N. Y. Insulator and method of manufacturing same. 2,437,559, Mar. 9.

Rummelsburg, Alfred L., New Castle, assignor to Hercules Powder Company, Wilmington, Del. Rosin derivatives. 2,437,481, Mar. 9.

Rutherford, Katherine E., assignee: *See*—
Rutherford, Paul A.

Rutherford, Paul A., assignor to Katherine E. Rutherford, Baltimore, Md. Cigarette machine. 2,437,615, Mar. 9.

Ryan, William R.: *See*—
Ogden, William L. W., and Ryan.

Saks, Ira: *See*—
Kelleher, Daniel.

Salisbury, Leroy F., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Fluorohydrocarbons by reacting hydrogen fluoride with acetylenic hydrocarbons. 2,437,307, Mar. 9.

Salisbury, Leroy F., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Making fluoroprene. 2,437,308, Mar. 9.

Salisbury, Winfield W., Arlington, Mass., assignor to the United States of America, as represented by the Secretary of the Navy. High-frequency electrical transmission line. 2,437,482, Mar. 9.

Sandberg, Oscar, Defiance, assignor to Lynch Package Machinery Corporation, Toledo, Ohio. Wrapping paper control mechanism. 2,437,560, Mar. 9.

Sander, Charles P.: *See*—
Herring, Earl R., and Sander.

Sandvik Steel Incorporated, assignee: *See*—
Allen, Walter H.

Satloff, Martin, Brooklyn, N. Y. Cigarette dispenser. 2,437,616, Mar. 9.

Schaaf, Fritz, Basel, Switzerland, assignor to Ciba Pharmaceutical Products Inc., Summit, N. J. Preparation for the care of the skin. 2,437,561, Mar. 9.

Schade, John, assignor to National Blank Book Company, Holyoke, Mass. Post binder mechanism. 2,437,617, Mar. 9.

Schering Corporation, assignee: *See*—
Serini, Arthur, and Logemann.

Schläpfer, Oscar, assignor to Sulzer Frères, Société Anonyme, Winterthur, Switzerland. Diesel-electric vehicle with automatic field weakening of the driving motors. 2,437,483, Mar. 9.

Schneller, Rudy F.: *See*—
Klein, Victor G., and Schneller.

Schofield, John, Jr., Rochdale, England. Weighting motion for drafting rollers. 2,437,562, Mar. 9.

Schottgen, Louis, Penwell, N. J., and M. J. Parkerton, New York, N. Y. Beer delivery and dispensing apparatus. 2,437,618, Mar. 9.

Schuster, Nicholas J., Easton, Minn. Drainage ditch equipment. 2,437,273, Mar. 9.

Seaver, John D., Marblehead, Mass., assignor to General Electric Company. Heat-treatment for copper-nickel-cobalt permanent magnet alloys. 2,437,563, Mar. 9.

Senn Corporation, assignee: *See*—
Coake, Charles F.

Sergio, Paul, South Bend, Ind. Leather skiving device. 2,437,565, Mar. 9.

Serini, Arthur, Berlin, and W. Logemann, Berlin-Charlottenburg, Germany, assignors to Schering Corporation, Bloomfield, N. J. Compounds with cortinlike effect and intermediates thereof and producing the same. 2,437,564, Mar. 9.

Setz, Walter H., Upper Darby, Pa., assignor to All American Aviation, Inc., Wilmington, Del. Emergency pickup equipment. 2,437,619, Mar. 9.

Shapiro, Joseph, Brooklyn, N. Y. Combined compact, purse, and key ring. 2,437,335, Mar. 9.

Simons, Edward W., assignor of one-half to G. W. Null, San Francisco, Calif. Cooling tower. 2,437,484, Mar. 9.

Simpson, John: *See*—
Parkin, Leslie, and Simpson.

Sinclair Refining Company, assignee: *See*—
Teter, John W.

Singer, Otto, London, England. Track wheel for vehicles. 2,437,407, Mar. 9.

Siwiec, Eugene S., Chicago, Ill. Toy. 2,437,442, Mar. 9.

Skellett, Albert M., Madison, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Electron discharge apparatus. 2,437,274, Mar. 9.

Skene, Matthew, Hempstead, and C. H. Guiles, Garden City, N. Y., assignors to The Sperry Corporation. Scanning reference generator. 2,437,275, Mar. 9.

Slater, John M.: *See*—
Frische, Carl A., Ferrill, and Slater.

Smith, Donald I.: *See*—
Cole, Robert A., and Smith.

Smith, Ernest C., Pawpaw, Mich. Sight for firearms. 2,437,363, Mar. 9.

Smith, George B., Maple Park, assignor to R. J. Baxter, Crystal Lake, and M. L. Smith, Evanston, Ill. Mineral feed for animals and producing same. 2,437,666, Mar. 9.

Smith, Herschel, and J. V. Dunham, Southampton, Pa., and N. K. Turnbull, Pitman, N. J. Hangfire recorder. 2,437,276, Mar. 9.

Smith-King Company, assignee: *See*—
King, John P.

Smith, Lawson A., assignor to R. H. Clark, Los Angeles, Calif. Drill and countersink tool. 2,437,364, Mar. 9.

Smith, Leicester I., West Hartford, assignor of one-half to M. R. Guthrie, Hartford, Conn. Bottle carrier. 2,437,667, Mar. 9.

Smith, Marjorie L., assignee, et al.: *See*—
Smith, George B.

Smith, T. L., Company, The, assignee: *See*—
Maxon, Glenway, Jr.

Snow-Nabstedt Gear Corporation, The, assignee: *See*—
Berndtson, John O.

Socony-Vacuum Oil Company, assignee: *See*—
Dalton, Swanton D.

Soday, Frank J., Baton Rouge, La., assignor to The United Gas Improvement Company. Production of erythritol. 2,437,277, Mar. 9.

Soday, Frank J., Baton Rouge, La., assignor to The United Gas Improvement Company. Polymerization of substituted indene. 2,437,278, Mar. 9.

Soet, John C., Grand Rapids, Mich. Blood drawing instrument. 2,437,408, Mar. 9.

Sonnenschein, Louis C., Milwaukee, Wis. Box clamp. 2,437,485, Mar. 9.

Speer, William F., Leonia, N. J., assignor to Aluminum Company of America, Pittsburgh, Pa. Coating masses of small copper-bearing aluminum articles. 2,437,620, Mar. 9.

Spencer, Percy L., West Newton, assignor to Raytheon Manufacturing Company, Newton, Mass. High-power microwave discharge tube. 2,437,279, Mar. 9.

Spencer, Percy L., West Newton, assignor to Raytheon Manufacturing Company, Newton, Mass. Electron discharge device of the magnetron type. 2,437,280, Mar. 9.

Sperry Corporation, The, assignee: *See*—
Frische, Carl A., Ferrill, and Slater.
Skene, Matthew, and Guiles.
Tawney, Gereld L.
Witt, Marcus K.

Sporket, Albert, Detroit, Mich. Sharpening device for lawn mowers. 2,437,443, Mar. 9.

Srofe, Jesse, Cincinnati, Ohio. Banner or pennant type of display device. 2,437,444, Mar. 9.

Stack, John D., Van Nuys, assignor to Twentieth Century-Fox Film Corporation, Los Angeles, Calif. Sound reverberating device. 2,437,445, Mar. 9.

Staiger, Otto K., Chicago, Ill., assignor to American Brake Shoe Company, Wilmington, Del. Material-handling apparatus. 2,437,486, Mar. 9.

Standard Oil Company: assignee: *See*—
Fragen, Nathan.
Hill, Philip.

Standard Oil Development Company, assignee: *See*—
Heigl, John J., and Wilson.
Roethell, Bruno E.

Standard-Thomson Corporation, assignee: *See*—
Woods, John E.

Stanley, Vernon K., assignee: *See*—
Gerondale, John J.

Steenhoven, John R., Springfield, Minn. Dump attachment for vehicles. 2,437,656, Mar. 9.

Stephens, Foster M., assignor to The Fluor Corporation, Ltd., Los Angeles, Calif. Gas pulsation dampening apparatus. 2,437,446, Mar. 9.

Stewart-Warner Corporation, assignee: *See*—
Allen, Arthur C.

Stonebraker, Harold E., Rochester, N. Y. Safety attachment for billfolds. 2,437,566, Mar. 9.

Strate, Carl F., Chicago, Ill. Device for computing lapse of time. 2,437,621, Mar. 9.

Stryker, Robert D., Collins, Ohio. Skid runner attachment for vehicles. 2,437,622, Mar. 9.

Studebaker Corporation, The, assignee: *See*—
Greenlee, Harry R.
White, Eber B.

Sturm, Milton & Company, assignee: *See*—
Burlin, Leslie H.

Sturm, Milton L., assignee: *See*—
Burlin, Leslie H.

Submarine Signal Company, assignee: *See*—
Curtis, Richard P.
Turner, Edwin E., Jr.

Sulzer Frères, Société Anonyme, assignee: *See*—
Schläpfer, Oscar.

Sun Oil Company, assignee: *See*—
Oxford, William F., Jr.

Sunbeam Corporation, assignee: *See*—
Koci, Ludvik J.

Sundby, Harold C., assignor of one-half to T. Y. Olsen, Philadelphia, Pa. Lighter. 2,437,623, Mar. 9.

Sunstein, David E.: *See*—
Ames, Millard E., Jr., and Sunstein.

Super-Seal Container Corporation, assignee: *See*—
Glocker, Gustave.

Super Speed Press Corporation, assignee: *See*—
Hoopes, Penrose R.

Surface Combustion Corporation, assignee: *See*—
Hodil, Ralph W.

Sutker, Irving, Brooklyn, N. Y. Work-holding and guiding mechanism for sewing machines. 2,437,624, Mar. 9.

Tarbell, John C., Springfield, Mass. Fly catching device. 2,437,447, Mar. 9.

Tawny, Gereld L., Hempstead, N. Y., assignor to The Sperry Corporation. High-frequency radiant energy apparatus. 2,437,281, Mar. 9.

Taylor, George F., Grosse Point Woods, assignor to Carboloy Company, Inc., Detroit, Mich. Process and die for extruding tubular plastic products. 2,437,625, Mar. 9.

Taylor, Scott V. E., Cleveland, Ohio. Hydraulic transmission. 2,437,448, Mar. 9.

Taylor, Taylor & Hobson Limited, assignee: *See*—
Cox, Arthur.

Technicolor Motion Picture Corporation, assignee: *See*—
Rackett, Gerald F.

Teter, John W., Chicago, Ill., assignor to Sinclair Refining Company, New York, N. Y. Reducing a metal oxide catalyst. 2,437,487, Mar. 9.

Texaco Development Corporation, assignee: *See*—
Garrison, Allen D.

Thomas, Albert G., Lynchburg, Va. Annular electronic tube. 2,437,365, Mar. 9.

Thomas, Albert G., Alexandria, Va. Hair drier. 2,437,366, Mar. 9.

Thompson, Leslie E., and A. Jenkins, London, England, assignors, by mesne assignments, to The Union Switch and Signal Company, Swissvale, Pa. Alternating electric current rectifier. 2,237,336, Mar. 9.

Tinsley, Clifford R., Beverly, N. J., assignor to United States Pipe and Foundry Company. Reclaiming used metal molds. 2,437,626, Mar. 9.

Tischendorf, Werner, Chardon, Ohio. Razor blade holder. 2,437,337, Mar. 9.

Tripp, Leonard W., assignor to Roadless Traction Limited, Hounslow, England. Endless track for vehicles. 2,437,338, Mar. 9.

Trojan Powder Company, assignee: *See*—
Wyler, Joseph A.

Tucker, William M., assignor to Eastman Kodak Company, Rochester, N. Y. Activating and electroplating stainless steel. 2,437,409, Mar. 9.

Tuerck, Karl H. W., Banstead, and H. J. Lichtenstein, Epsom, England, assignors to The Distillers Company, Limited, Edinburgh, Scotland. Manufacture of hydroxy acids. 2,437,410, Mar. 9.

Turnbull, Norman K.: *See*—
Smith, Herschel, Dunham, and Turnbull.

Turner, Edwin E., Jr., West Roxbury, assignor, by mesne assignments, to Submarine Signal Company, Boston, Mass. Electroacoustical transducer. 2,437,282, Mar. 9.

Turner, Richard G., assignor to Crompton & Knowles Loom Works, Worcester, Mass. Brake and dampener for rocking bobbin magazines. 2,437,627, Mar. 9.

Tuten, James M., Greenville, S. C., assignor to Draper Corporation, Hopedale, Mass. Cloth take-up mechanism for looms. 2,437,367, Mar. 9.

Tuttle, Clifton M., assignor to Eastman Kodak Company, Rochester, N. Y. Densitometer. 2,437,411, Mar. 9.

Twentieth Century-Fox Film Corporation, assignee: *See*—
Corcoran, James P.
Stack, John D.

Twigg, Charles & Company Limited, assignee: *See*—
Cooklin, Leonard, and Holl.s.

Uhlemann Optical Co. of Illinois, assignee: *See*—
Uhlemann, Richard C.

Uhlemann, Richard C., Barrington, assignor to Uhlemann Optical Co. of Illinois, Chicago, Ill. Lens edge grinder. 2,437,567, Mar. 9.

Ulanet, Herman, Newark, N. J. Thermal control for gluing structural assemblies and other purposes. 2,437,488, Mar. 9.

Union Carbide and Carbon Corporation, assignee: *See*—
Lobosco, Roscoe R.

Union Oil Company of California, assignee: *See*—
Huffman, Hal C.
McKinnis, Art C.

Union Switch & Signal Company, The, assignee: *See*—
Bossart, Paul N.
Hedding, Linnie K.
Lewis, Lloyd V.
McWhirter, William C., and Jefferson.
Thompson, Leslie E., and Jenkins.

United Gas Improvement Company, The, assignee: *See*—
Soday, Frank J.

United Shoe Machinery Corporation, assignee: *See*—
Goodhue, William V., and Norton.

United States of America, The, assignee: *See*—
Watson, Norman A., Veneklasen, Leonard, and Gales.

United States Pipe and Foundry Company, assignee: *See*—
Tinsley, Clifford R.

Universal Lighters Selling Company Ltd., assignee: *See*—
Gostkowski, Bedri H.

Universal Oil Products Company, assignee: *See*—
Brown, Kenneth M., and Gerhold.

Urso, Ralph F., assignor to McCord Corporation, Detroit, Mich. Pump. 2,437,568, Mar. 9.

Van Amburg, Otto H., Bridgeport, and J. M. Pistey, Fairfield, Conn., assignors to General Electric Company. Lamp fixture. 2,437,569, Mar. 9.

Vance, Robert M., Cleveland, and A. G. Horney, Worthington, Ohio, assignors to Air Reduction Company, Incorporated, New York, N. Y. 2-chloroethylcyclopropyl ether and preparing it. 2,437,368, Mar. 9.

Veatch, Joseph G., assignor to Chicago Telephone Supply Company, Elkhart, Ind. Toroidal winding machine. 2,437,309, Mar. 9.

Veneklasen, Paul S.: *See*—
Watson, Norman A., Veneklasen, Leonard, and Gales.

Viers, Giles W., Denton, Tex. Cylinder firing position locator used in adjusting valve clearance. 2,437,283, Mar. 9.

Vokes, Cecil G., London, assignor to Vokes Limited, Guilford, Surrey, England. Air filter with heat exchange arrangements. 2,437,489, Mar. 9.

Vokes Limited, assignee: *See*—
Vokes, Cecil G.

Von Zelewsky, Ottomar, Neuhausen-on-the-Rheinfall, Switzerland, assignor to Aktiengesellschaft der Eisen- und Stahlwerke vorm. Georg Fischer, Schaffhausen. Lathe. 2,437,570, Mar. 9.

Wange, Gilbert, Sandusky, Ohio. Steam iron. 2,437,571, Mar. 9.

Waldie, William A., Oakwood, Ohio, assignor to New Wrinkle, Inc., Wilmington, Del. Flexilizer. 2,437,369, Mar. 9.

Walter, Leo N., Oak Glenn, Ill. Power excavating apparatus. 2,437,572, Mar. 9.

Walter, Leo N., Oak Glenn, Ill. Heater construction. 2,437,573, Mar. 9.

War, United States, as represented by the Secretary of: *See*—
Moore, Frederick J.

Warren, John T., Long Beach, Calif. Dog harness. 2,437,628, Mar. 9.

Watson, Benjamin W., Trenton, N. J. Artificial rubber from vinyl resin, phenol-aldehyde resin, and plasticizer. 2,437,284, Mar. 9.

Watson, Norman A., P. S. Veneklasen, R. W. Leonard, and R. S. Gales, Los Angeles, Calif., assignors to the United States of America. Ear defender. 2,437,490, Mar. 9.

Watter, Michael, and E. G. Bruce, assignors to The Budd Company, Philadelphia, Pa. Aircraft. 2,437,574, Mar. 9.

Waugh Equipment Company, assignee: *See*—
Berman, Samuel.

Weathered, Eric C.: *See*—
De Young, William, and Weathered.

Webster, Benjamin C., Fairfield, assignor to The Bryant Electric Company, Bridgeport, Conn. Connector. 2,437,339, Mar. 9.

Weiss, William C.: *See*—
Gable, Paul T., and Weiss.

Welshman, James R., Cranston, assignor to Grinnell Corporation, Providence, R. I. Flaring tubing. 2,437,285, Mar. 9.

Werber, Norberto, Buenos Aires, Argentina. Double fuse. 2,437,310, Mar. 9.

West, Herbert J., and H. M. Enterline, Stamford, Conn., assignors to American Cyanamid Company, New York, N. Y. Heat-stable plasticized resin compositions. 2,437,657, Mar. 9.

Westinghouse Air Brake Company, The, assignee: *See*—
Aikman, Burton S.

Weyerts, Walter J., and C. W. Wiederhold, assignors to Eastman Kodak Company, Rochester, N. Y. Latent image intensification with sulfur dioxide. 2,437,412, Mar. 9.

Whaley, William, Knoxville, Tenn. Loading machine. 2,437,629, Mar. 9.

Whitbeck, Roland A., assignee: *See*—
Orozco, Golbert H.

White, Eber B., assignor to The Studebaker Corporation, South Bend, Ind. Steering device. 2,437,575, Mar. 9.

Wick, Quintin J., Highland, Ill. Flame-heater cathode tube. 2,437,576, Mar. 9.

Wiederhold, Charles W.: *See*—
Weyerts, Walter J., and Wiederhold.

Williams, Alfred O., Battle Creek, Mich. Interengaging impeller type blower or pump. 2,437,658, Mar. 9.

Williams, Keith, Buffalo, N. Y. Hand brake for railway cars. 2,437,491, Mar. 9.

Williams, Morris F., and S. B. Gailt, Syracuse, assignors to Crucible Steel Company of America, New York, N. Y. Wire pay-off mechanism. 2,437,630, Mar. 9.

Williams, Walter W., Bloomington, Ill., assignor to Eureka Williams Corporation. Absorption refrigeration system including condenser pressure control means. 2,437,577, Mar. 9.

Williamson, Floyd M., Detroit, Mich. Vanity case. 2,437,578, Mar. 9.

Willson, David S., Muskegon Heights, Mich, assignor to John Wood Manufacturing Company, Inc., Philadelphia, Pa. Meter with cylinders parallel to the drive shaft. 2,437,413, Mar. 9.

Wilmot Castle Company, assignee: *See*—
Greppin, Ernest H.

Wilson, Cyril D., Metuchen, N. J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Para-tertiary amino phenyl aldehydes. 2,437,370, Mar. 9.

Wilson, James A.: *See*—
Heigl, John J., and Wilson.

Wilson, Robert E., Minneapolis, Minn. Electrical outlet construction. 2,437,579, Mar. 9.

Wilson, William W., Memphis, Tenn. Latch for sofa bed hinges. 2,437,580, Mar. 9.

Wincharger Corporation, assignee: *See*—
Albers, John R.

Witt, Marcus K., Hempstead, N. Y., assignor to The Sperry Corporation. Radar device. 2,437,286, Mar. 9.

Wolfram, John N., assignor to The Parker Appliance Company, Cleveland, Ohio. Coupling for tubes. 2,437,632, Mar. 9.

Wood, John, Manufacturing Company, Inc., assignee: *See*—
Willson, David S.

Wood, Joseph K., assignor to General Spring Corporation, New York, N. Y. Support. 2,437,631, Mar. 9.

Woods, John E., Brookline, assignor, by mesne assignments, to Standard-Thomson Corporation, Boston, Mass. Heat exchange apparatus. 2,437,287, Mar. 9.

Wray, Robert J., Modesto, Calif. Plow assembly mount. 2,437,581, Mar. 9.

Wright, Roland T., St. Louis, Mo., assignor, by mesne assignments, to Bick Corporation. Vending machine. 2,437,311, Mar. 9.

Wyler, Joseph A., assignor to Trojan Powder Company, Allentown, Pa. Process for the preparation of dipentaerythritol hexanitrate. 2,437,582, Mar. 9.

Yorkshire Tar Distillers Limited, assignee: *See*—
Milner, David W.

Young, Eric J., Jersey City, N. J. Hosiery supporting means. 2,437,583, Mar. 9.

Zamora, Vicente, Manila, P. I. Ballot box. 2,437,584, Mar. 9.

Zenith Radio Corporation, assignee: *See*—
Aram, Nathan W.
Bell, John F.

Zimmern, Benno, New York, N. Y. Child's swivel harness. 2,437,585, Mar. 9.

Zugelder, Alfred J., Hamilton, Ohio. Suction device for removing dust from fabric or the like. 2,437,340, Mar. 9.

LIST OF REISSUE INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 9TH DAY OF MARCH, 1948

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Dispenser and cutter, Automatic tape. H. L. Fitch. Re. 22,981, Mar. 9.
Dyestuffs, Manufacture of. N. H. Haddock. Re. 22,983, Mar. 9.
Mechanical adjustment of elements mounted inside vacuum tubes. C. H. Foulkes. Re. 22,982, Mar. 9.
Spring hanger. A. B. Donkersley and J. R. Welshman. Re. 22,980, Mar. 9.

LIST OF PLANT INVENTIONS

Nectarine plant. H. C. Swim. 787, Mar. 9.
Rose plant. J. H. Van Barneveld. 788, Mar. 9.

LIST OF DESIGN INVENTIONS

Alphabet for forming monograms or the like. M. Chernow. 148,910, Mar. 9.
Arm rest and door pull, Combined. E. G. Wettlaufer. 148,968, Mar. 9.
Ash tray or article of similar nature. A. J. Dreitzer. 148,918, Mar. 9.
Baking dish, griddle, and dutch oven, Combination. C. A. Ovenshire. 148,948, Mar. 9.
Belt. J. S. Ashdowne. 148,903, Mar. 9.
Bier-pin. E. L. Schofield. 148,961, Mar. 9.
Billfold and coin purse, Combined. J. P. Reis. 148,955, Mar. 9.
Bobsled. R. Warrender. 148,967, Mar. 9.
Box, Mail. H. W. Robinette. 148,958, Mar. 9.
Brick, Child's. B. M. Hickman. 148,930, Mar. 9.
Brooch or similar article. A. Philippe. 148,953, Mar. 9.
Bubbling device or the like, Illuminable. J. Petry, 148,950, Mar. 9.
Cabinet, Corner wall. C. S. Motter. 148,940, Mar. 9.
Cabinet or the like, Radio. F. C. Burton. 148,907, Mar. 9.
Cabinet, Sewing machine. W. J. Peets. 148,949, Mar. 9.
Candelabrum and flower vase, Combined. A. E. Thienhaus. 148,965, Mar. 9.
Card, Playing. G. J. O'Donnell. 148,946, Mar. 9.
Casing, Suction cleaner. J. H. Muffer and L. H. Latta. 148,945, Mar. 9.
Chair or similar article, Child's training. A. B. Sawyer. 148,960, Mar. 9.
Clip, Fountain pen. J. Wallace. 148,966, Mar. 9.
Clock, Wall. G. W. Florian. 148,923, Mar. 9.
Coaster or similar article. H. A. Ganser. 148,925, Mar. 9.
Coat, Work. H. C. Cookman. 148,912, Mar. 9.
Compass, Auto. B. E. Sherrill. 148,962, Mar. 9.
Connector, Adjustable line. E. H. Karleen. 148,933, Mar. 9.
Control unit. C. J. Daubenberger. 148,914, Mar. 9.
Cooker, Barbecue. D. Nassif. 148,943, Mar. 9.
Cover or similar article, Wheel. G. A. Lyon. 148,937, Mar. 9.
Dispenser, Beverage. A. Naiden. 148,942, Mar. 9.
Dispenser, Salad. M. E. Ryan. 148,959, Mar. 9.
File, Revolving. O. Decker. 148,915, Mar. 9.
Font of keyboard symbols. L. Yutang. 148,970, Mar. 9.
Fork for bicycles and velocipedes. E. D. Martin. 148,939, Mar. 9.
Frame, Picture. P. L. Hartnett. 148,929, Mar. 9.
Handle for a sanding pad. S. A. Crosby. 148,913, Mar. 9.
Holder, Candle. D. Kaplan. 148,932, Mar. 9.
Holder, Razor and blade. H. H. Hopkins. 148,931, Mar. 9.
Ladle. E. J. Comeau. 148,911, Mar. 9.
Lamp. T. W. Wilson. 148,969, Mar. 9.
Lamp and potted plant bowl, Combination. R. O. Bextel. 148,905, Mar. 9.
Leather or similar article, Embossed. S. B. Freedman. 148,924, Mar. 9.
Paving machine, Road. C. B. Stevens. 148,963, Mar. 9.
Pen or like article. E. Douglas. 148,917, Mar. 9.
Pendant, Luminous. J. C. MacLennan. 148,938, Mar. 9.
Phonograph or the like. H. L. Everett. 148,921, Mar. 9.
Protector, Ear drum. J. J. Cantor. 148,908, Mar. 9.
Sachet bag and perfume bottle container, Combined. E. N. Graham. 148,927, Mar. 9.
Saddle. L. Kosloff. 148,934, Mar. 9.
Scarf. A. M. Goldberg. 148,926, Mar. 9.
Scraper or similar article. H. Eisenberg. 148,920, Mar. 9.
Scythe. G. W. Carlson. 148,909, Mar. 9.
Seat, Machine. W. A. Fleischer. 148,922, Mar. 9.
Service station island, Automobile. J. A. Hardesty. 148,928, Mar. 9.
Shaker, Condiment. B. Belcher. 148,906, Mar. 9.
Shoe. I. Tarlow. 148,964, Mar. 9.
Shoe, Baby. E. M. Potts. 148,954, Mar. 9.
Spray gun or the like. J. W. Baur and E. Gustafsson. 148,904, Mar. 9.
Stretcher, Shoe toe-cap. R. Pfifferling. 148,951, Mar. 9.
Support and seat, Combined article. H. B. Rhodes. 148,956, Mar. 9.
Table, Provincial step. G. Alessandrini. 148,902, Mar. 9.
Toaster, Electric. H. L. Laylon. 148,936, Mar. 9.
Tongs, Food. C. Duncan. 148,919, Mar. 9.
Tool, Combination. L. Rice. 148,957, Mar. 9.
Top, Table. D. H. Dickerman and F. H. Coburn. 148,916, Mar. 9.
Toy food mixer. C. H. Muller. 148,941, Mar. 9.
Toy or similar article, Ring. A. D. Phelps, Jr. 148,952, Mar. 9.
Trailer. R. F. Kuns. 148,935, Mar. 9.
Tray, Display. N. E. Olin. 148,947, Mar. 9.
Tray or similar article, Photographic film and print. T. G. Nevell and F. Samet. 148,944, Mar. 9.

LIST OF INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 9TH DAY OF MARCH, 1948

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Abrading machine. W. De Young and E. C. Weathered. 2,437,245, Mar. 9.
Abrading tool. L. H. Palmer. 2,437,650, Mar. 9.
Absolute pressure gauge. A. C. Allen. 2,437,371, Mar. 9.
Absorption refrigeration system including condenser pressure control means. W. W. Williams. 2,437,577, Mar. 9.
Acids, Manufacture of hydroxy. K. H. W. Tuerck and H. J. Lichtenstein. 2,437,410, Mar. 9.
Activating and electroplating stainless steel. W. M. Tucker. 2,437,409, Mar. 9.
Actuating means for colorimetric apparatus. W. F. Peck, K. W. Harper, and R. S. Estey. 2,437,550, Mar. 9.
Aircraft. M. Watter and E. G. Bruce. 2,437,574, Mar. 9.
Aircraft heating control system. W. J. Field. 2,437,318, Mar. 9.
Air filter with heat exchange arrangements. C. G. Vokes. 2,437,489, Mar. 9.
Air screw driven from a common shaft, Multiple. J. F. Morgan. 2,437,399, Mar. 9.
Alarm, Deep and shoal. T. F. Bludworth. 2,437,416, Mar. 9.
Alimentary paste extrusion apparatus. J. De Francisci. 2,437,460, Mar. 9.
Alkali metal methylates, Production of. R. S. Robinson. 2,437,272, Mar. 9.
Alternating electric current rectifier. L. E. Thompson and A. Jenkins. 2,437,336, Mar. 9.
Ammunition container. W. V. Goodhue and J. P. Norton. 2,437,425, Mar. 9.
Anhydrous HCl, Manufacturing. K. C. Bottenberg and J. A. Richardson. 2,437,290, Mar. 9.
Animal trap. C. W. Crumrine. 2,437,507, Mar. 9.
Annular electronic tube. A. G. Thomas. 2,437,365, Mar. 9.
Anodic cleaning. G. H. Orozco. 2,437,474, Mar. 9.
Apparatus for bending metal strips edgewise in making helical fins. E. Bruegger. 2,437,500, Mar. 9.
Apparatus for cutting the bevel on hull planking. B. Aas. 2,437,236, Mar. 9.
Apparatus for instantaneously indicating on an oscilloscope screen the absorption spectrum of a substance. J. J. Heigl and J. A. Wilson. 2,437,323, Mar. 9.
Apparatus for internal-combustion engines, Control. M. E. Chandler. 2,437,377, Mar. 9.
Apparatus for treating granular materials. F. G. R. Magnusson and G. V. Oholm. 2,437,395, Mar. 9.
Aromatic mercury alcoholates. C. N. Andersen. 2,437,450, Mar. 9.
Articles from short lengths of tubes, Manufacture of. L. Parkin and J. Simpson. 2,437,477, Mar. 9.
Articulated bobbin holder. W. E. Moore. 2,437,471, Mar. 9.
Artificial bait. C. L. Hahn. 2,437,523, Mar. 9.
Artificial bait. L. H. Pecher. 2,437,549, Mar. 9.
Artificial rubber from vinyl resin, phenol-aldehyde resin, and plasticizer. B. W. Watson. 2,437,284, Mar. 9.
Automatic coupling, decoupling, and adjusting hitch. F. R. Hawkins. 2,437,321, Mar. 9.
Automatic telegraph key. F. A. Bartlett. 2,437,497, Mar. 9.
Automobile control mechanism. S. T. Kobernick. 2,437,260, Mar. 9.
Balanced impeller structure for wind motors. J. R. Albers. 2,437,659, Mar. 9.
Ball game apparatus, Tethered. R. Bergerioux. 2,437,454, Mar. 9.
Ballot box. V. Zamora. 2,437,584, Mar. 9.
Basic amides of 1-aryl-cycloalkyl-1-carboxylic acids. H. Martin and F. Häfliger. 2,437,545, Mar. 9.
Bedspring support. H. E. Jenkins. 2,437,535, Mar. 9.
Belt conveyor frame construction. G. W. Benjamin. 2,437,499, Mar. 9.
Binder, Loose-leaf. J. A. Purvis. 2,437,360, Mar. 9.
Blade honing device. N. B. Anderson. 2,437,495, Mar. 9.
Blank for propeller blades, Spot milling tubular. D. J. Davis. 2,437,317, Mar. 9.
Blood drawing instrument. J. C. Soet. 2,437,408, Mar. 9.
Blower or pump, Interengaging impeller type. A. O. Williams. 2,437,658, Mar. 9.
Boiler construction. C. R. Briggs. 2,437,347, Mar. 9.
Booster type servomotor system. C. L. Johnson and R. R. Richolt. 2,437,536, Mar. 9.
Bottle carrier. L. I. Smith. 2,437,667, Mar. 9.
Box: *See*—
Ballot box.
Knitting box.
Box clamp. L. C. Sonnenschein. 2,437,485, Mar. 9.
Brackets, Takedown type wall. R. E. McLean. 2,437,647, Mar. 9.
Brake and dampener for rocking bobbin magazines. R. G. Turner. 2,437,627, Mar. 9.
Brake applying mechanism. C. S. McCarthy. 2,437,396, Mar. 9.
Brake control device. C. L. Eksergian. 2,437,423, Mar. 9.
Brassière. I. Rosner. 2,437,655, Mar. 9.
Buffer spring device for drilling machines. A. Hossfeld. 2,437,429, Mar. 9.
Buffing machine. O. W. Mojonnier. 2,437,398, Mar. 9.
Buffing machine. O. W. Mojonnier. 2,437,434, Mar. 9.
Cabinet: *See*—
Kitchen cabinet.
Carriage, Collapsible. L. Cooklin and T. R. Hollis. 2,437,380, Mar. 9.
Carrier: *See*—
Bottle carrier.
Carrying device. A. P. Robinson. 2,437,405, Mar. 9.
Cart, Collapsible. M. Hochron. 2,437,386, Mar. 9.
Case: *See*—
Vanity case.
Case for drills. R. D. Douglas. 2,437,595, Mar. 9.
Caster. C. A. Baum. 2,437,588, Mar. 9.
Caster for furniture. T. Bailey. 2,437,312, Mar. 9.
Catalysts. H. C. Huffman. 2,437,533, Mar. 9.
Catalysts, Recovery of. N. Fragen. 2,437,352, Mar. 9.
Catalytic alkylation of aromatic hydrocarbons by long chain olefins. P. Hill. 2,437,356, Mar. 9.
Catalytic oxidation of unsaturated organic compounds. N. A. Milas. 2,437,648, Mar. 9.
Catalytic process for the isomerization of hydrocarbon vapors in the presence of a metal-halide catalyst. H. R. Legatski. 2,437,394, Mar. 9.
Catalytic reforming of hydrocarbons. H. C. Huffman. 2,437,532, Mar. 9.
Catalytic treatment of hydrocarbons. H. C. Huffman. 2,437,531, Mar. 9.
Catheter-type instrument. L. H. Krippendorf. 2,437,542, Mar. 9.
Centerboard installation. H. W. Rice. 2,437,271, Mar. 9.
Chair: *See*—
Knockdown metal chair.
Knockdown wrought iron chair.
Chemical reactions, Controlling. B. E. Roethell. 2,437,334, Mar. 9.
Cigaret dispenser. J. J. Gerondale. 2,437,464, Mar. 9.
Cigarette dispenser. M. Satloff. 2,437,616, Mar. 9.
Cigarette machine. P. A. Rutherford. 2,437,615, Mar. 9.
Circuit: *See*—
Diode detector circuit.
Clamp: *See*—
Box clamp.
Clock. G. J. Cunningham. 2,437,459, Mar. 9.
Cloth take-up mechanism for looms. J. M. Tutea. 2,437,367, Mar. 9.
Clothespin dispenser. K. V. Bell. 2,437,498, Mar. 9.
Clutch plate. D. Kelleher. 2,437,537, Mar. 9.
Coating masses of small copper-bearing aluminum articles. W. F. Speer. 2,437,620, Mar. 9.
Coaxial optical system for displacement gauges. J. H. Long and W. Lupish. 2,437,608, Mar. 9.
Coil and yoke for cathode ray tubes, Deflection. R. B. Gethmann. 2,437,513, Mar. 9.
Coloring metal surfaces. L. J. Rogers. 2,437,441, Mar. 9.
Comb accessory. F. R. Heyman. 2,437,298, Mar. 9.
Compact, purse, and key ring, Combined. J. Shapiro. 2,437,335, Mar. 9.
Compass, Repeater. L. P. Crosman. 2,437,506, Mar. 9.
Compounds with cortinlike effect and intermediates thereof and producing the same. A. Serini and W. Logemann. 2,437,564, Mar. 9.
Compressor mechanism. B. S. Aikman. 2,437,341, Mar. 9.
Concentric and parallel conductor systems, Junction between. W. Dällenbach. 2,437,244, Mar. 9.
Connector. B. C. Webster. 2,437,839, Mar. 9.
Container: *See*—
Ammunition container.
Pickup and delivery container.
Container closure. G. Glocker. 2,437,515, Mar. 9.
Container for air-depolarized cells, Protective gas-permeable. L. S. Dunham. 2,437,422, Mar. 9.
Control mechanism for automatic pilot, Auxiliary. P. G. Holt. 2,437,256, Mar. 9.
Control system, Automatic. R. Penn. 2,437,551, Mar. 9.
Control system, Remote. L. V. Lewis. 2,437,326, Mar. 9.
Coolant supplying mechanism for machine tools. M. R. Karge. 2,437,605, Mar. 9.
Copolymers of mixtures comprising allyl and methallyl ether esters. G. F. D'Alelio. 2,437,508, Mar. 9.

Corner assembly and fastening means for knockdown counters and the like. J. Aksien. 2,437,235, Mar. 9.
Cotton seed, Delinting. P. C. McLemore. 2,437,397, Mar. 9.
Coupling: *See*—
Flexible pipe coupling.
Coupling for tubes. J. N. Wolfram. 2,437,632, Mar. 9.
Cracking process. S. D. Dalton. 2,437,383, Mar. 9.
Crocheted hat and producing the same. V. C. Harvel. 2,437,525, Mar. 9.
Crossarm for transmission wires. F. E. Buxton. 2,437,375, Mar. 9.
Cutting device. D. R. Eastwood. 2,437,295, Mar. 9.
Cyanocyclobutane derivatives. P. L. Barrick. 2,437,289, Mar. 9.
Cylinder firing position locator used in adjusting valve clearance. G. W. Viers. 2,437,283, Mar. 9.
Dampening apparatus, Gas pulsation. F. M. Stephens. 2,437,446, Mar. 9.
Decoy. L. C. Hufford. 2,437,604, Mar. 9.
Delivery and dispensing apparatus, Beer. L. Schottgen and M. J. Parkerton. 2,437,618, Mar. 9.
Demand valve. F. E. J. Frye and E. A. Pollard. 2,437,462, Mar. 9.
Densitometer. C. M. Tuttle. 2,437,411, Mar. 9.
Dental operating lamp construction. E. H. Greppin. 2,437,516, Mar. 9.
Detergent composition. L. F. Henderson and B. L. Maxwell. 2,437,253, Mar. 9.
Device for computing lapse of time. C. F. Strate. 2,437,621, Mar. 9.
Device for conveying picked fruit from the hand to a remote receptacle. R. E. Faulkner. 2,437,461, Mar. 9.
Device for depositing material in well holes. J. D. Haynes. 2,437,663, Mar. 9.
Dial for resistance apparatus, Indicating. G. R. Greenslade. 2,437,355, Mar. 9.
Dial scale, switch operator, and position indicator, Combined. E. F. McDonald, Jr. 2,437,610, Mar. 9.
Diesel-electric vehicle with automatic field weakening of the driving motors. O. Schläpfer. 2,437,483, Mar. 9.
Differential twin chamber neutron meter. H. M. Parker. 2,437,476, Mar. 9.
Diode detector circuit. T. G. Anderson. 2,437,493, Mar. 9.
Dispenser: *See*—
Cigaret dispenser. Clothespin dispenser.
Cigarette dispenser.
Display device, Banner or pennant type of. J. Srofe. 2,437,444, Mar. 9.
Distillation from a film by diffusion into a gas stream. O. Denys. 2,437,594, Mar. 9.
Drainage ditch equipment. N. J. Schuster. 2,437,273, Mar. 9.
Drier: *See*—
Hair drier.
Drier for sheet material, Drum. J. S. Hill. 2,437,254, Mar. 9.
Drill and countersink tool. L. A. Smith. 2,437,364, Mar. 9.
Drilling fluids, Treatment of. A. D. Garrison. 2,437,297, Mar. 9.
Dryer: *See*—
Hair drier.
Dump attachment for vehicles. J. R. Steenhoven. 2,437,656, Mar. 9.
Dust separator. D. Dalin. 2,437,294, Mar. 9.
Dust separator and filter. R. E. Brown. 2,437,592, Mar. 9.
Dyestuff preparations containing an acid ester salt of a leuco vat dyestuff, a water-soluble acid amide and a salt of a quaternary amino acid. R. Ratti and P. Brandt. 2,437,554, Mar. 9.
Ear defender. N. A. Watson, P. S. Veneklasen, R. W. Leonard, and R. S. Gales. 2,437,490, Mar. 9.
Electric control device. T. S. and J. Briskin, and J. Golick. 2,437,591, Mar. 9.
Electric heater thermostatic switch control. P. B. Levitt and J. D. Morgan. 2,437,262, Mar. 9.
Electric motor speed controller. M. Morrison. 2,437,611, Mar. 9.
Electric motor system and controlling the same. J. Hornbostel. 2,437,428, Mar. 9.
Electric switch lock. W. C. McWhirter and G. V. Jefferson. 2,437,328, Mar. 9.
Electric welding ground. O. R. Abram. 2,437,633, Mar. 9.
Electrical heating apparatus for liquids. R. C. Belgau. 2,437,453, Mar. 9.
Electrical measuring apparatus. F. K. Floyd. 2,437,639, Mar. 9.
Electrical outlet construction. R. E. Wilson. 2,437,579, Mar. 9.
Electrical rectifier. L. K. Hedding. 2,437,322, Mar. 9.
Electrical servo system. A. V. Bedford. 2,437,313, Mar. 9.
Electroacoustical transducer. E. E. Turner, Jr. 2,437,282, Mar. 9.
Electrolytically zinc plating magnesium and magnesium base alloys. H. Osborg. 2,437,612, Mar. 9.
Electron discharge apparatus. A. M. Skellett. 2,437,274, Mar. 9.
Electron discharge device of the magnetron type. P. L. Spencer. 2,437,280, Mar. 9.
Embalming appliance. A. V. Cullen. 2,437,381, Mar. 9.
Emulsions containing a drying oil-ester resin copolymer. W. H. Butler. 2,437,293, Mar. 9.
End-loaded piezoelectric unit. H. M. Bach. 2,437,660, Mar. 9.
Engine control, Supercharged. E. B. Meripol. 2,437,546, Mar. 9.
Engine starting mechanism. R. M. Nardone. 2,437,400, Mar. 9.
Erythritol, Production of. F. J. Soday. 2,437,277, Mar. 9.
Fastening and holding device for doors, gates, and the like. C. J. Rice. 2,437,403, Mar. 9.
Film registering apparatus. G. F. Rackett. 2,437,361, Mar. 9.
Film registry means for motion-picture projectors. E. Boecking. 2,437,239, Mar. 9.
Fire control instrument. H. C. Ford. 2,437,463, Mar. 9.
Fish stringer. E. F. Murray and C. E. Hermann. 2,437,331, Mar. 9.
Fixture, Lamp. O. H. Van Amburg and J. M. Pistey. 2,437,569, Mar. 9.
Flame-heater cathode tube. Q. J. Wick. 2,437,576, Mar. 9.
Flaring tubing. J. R. Welshman. 2,437,285, Mar. 9.
Flashlight holder. E. A. Bernstein. 2,437,373, Mar. 9.
Flexible pipe coupling. W. S. Drinkwater. 2,437,246, Mar. 9.
Flexible pocket receptacle. G. Barton. 2,437,587, Mar. 9.
Flexilizer. W. A. Waldie. 2,437,369, Mar. 9.
Fluorohydrocarbons by reacting hydrogen fluoride with acetylenic hydrocarbons. L. F. Salisbury. 2,437,307, Mar. 9.
Fluoroprene, Making. L. F. Salisbury. 2,437,308, Mar. 9.
Flush tank. S. H. Moyer and L. R. Jensen. 2,437,435, Mar. 9.
Fly catching device. J. C. Tarbell. 2,437,447, Mar. 9.
Forced air circuit refrigerating apparatus. W. M. Baird. 2,437,452, Mar. 9.
Foundation garment. I. Rosner. 2,437,654, Mar. 9.
Frequency comparison apparatus. L. F. Mayle. 2,437,609, Mar. 9.
Fuse, Double. N. Werber. 2,437,310, Mar. 9.
Gage: *See*—
Absolute pressure gauge.
Garment cleaning machine. E. W. Pickett, Jr., and D. E. McMullen. 2,437,478, Mar. 9.
Gaseous mixtures, Separation of. R. B. Anderson. 2,437,288, Mar. 9.
Gasket and static seal, Packing. J. S. Aber. 2,437,586, Mar. 9.
Gasoline and other hydrocarbons from coconut oil and related animal and vegetable oils and fats, Producing. S. Petroff and A. E. Prats. 2,437,438, Mar. 9.
Gauge: *See*—
Absolute pressure gauge.
Generator: *See*—
Scanning reference generator.
Golf club grips. A. P. Robinson. 2,437,404, Mar. 9.
Graphic privacy system. J. V. L. Hogan and H. C. Ressler. 2,437,255, Mar. 9.
Grinder, Lens edge. R. C. Uhlemann. 2,437,567, Mar. 9.
Grinding wheel dresser. L. O. Greeley. 2,437,599, Mar. 9.
Guide for braider carriers, Yarn. J. P. King. 2,437,539, Mar. 9.
Hair drier. A. G. Thomas. 2,437,366, Mar. 9.
Hairpin. E. H. Butler. 2,437,502, Mar. 9.
Halter (for women). S. D. Koret. 2,437,541, Mar. 9.
Handbag frame assembly. S. Giordano. 2,437,597, Mar. 9.
Handbag provided with removable, washable cover. E. A. Czap. 2,437,382, Mar. 9.
Hand brake for railway cars. K. Williams. 2,437,491, Mar. 9.
Hanger: *See*—
Spring hanger.
Hanger and creaser, Trousers. H. C. Nelson. 2,437,437, Mar. 9.
Hardening of soil and the like. R. M. Hodgson. 2,437,387, Mar. 9.
Harness, Dog. J. T. Warren. 2,437,628, Mar. 9.
Harness motions. L. D. Cobb. 2,437,349, Mar. 9.
Heat exchange apparatus. J. E. Woods. 2,437,287, Mar. 9.
Heat to or from material on band conveyors, Transferring. W. H. Allen. 2,437,492, Mar. 9.
Heat-treatment for copper-nickel-cobalt permanent magnet alloys. J. D. Seaver. 2,437,563, Mar. 9.
Heater construction. L. N. Walter. 2,437,573, Mar. 9.
Helicopter steering surface control. E. L. Kirchoff. 2,437,324, Mar. 9.
High-frequency electrical transmission line. W. W. Salisbury. 2,437,482, Mar. 9.
High-frequency radiant energy apparatus. G. L. Tawny. 2,437,281, Mar. 9.
High-power microwave discharge tube. P. L. Spencer. 2,437,279, Mar. 9.
High-temperature cleaning of steel strip, including removing ferrous chloride therefrom. R. W. Hodil. 2,437,528, Mar. 9.

Hitch. J. Kuchar. 2,437,607, Mar. 9.
Holder: *See*—
Articulated bobbin holder. Razor blade holder.
Flashlight holder. Welding rod holder.
Honing and filing device. R. O. Hein. 2,437,641, Mar. 9.
Hosiery supporting means. E. J. Young. 2,437,583, Mar. 9.
Humidifying oxygen. J. A. Heidbrink and C. G. Herrick. 2,437,526, Mar. 9.
Hydraulic clutch control. F. L. Lawrence. 2,437,430, Mar. 9.
Hydraulic hoisting mechanism. E. Hall. 2,437,466, Mar. 9.
Hydraulic transmission. S. V. E. Taylor. 2,437,448, Mar. 9.
Hydrofluoric acid alkylation process. M. M. Marisic. 2,437,544, Mar. 9.
Impulse recording optical system. J. A. Maurer, Jr. 2,437,470, Mar. 9.
Indicator: *See*—
Specific gravity indicator.
Inflatable article. K. G. Hann. 2,437,602, Mar. 9.
Injector, Fuel. J. H. Holloway. 2,437,529, Mar. 9.
Inking and edge setting machine. G. W. Liberty. 2,437,431, Mar. 9.
Insecticidal compositions comprising a phenyl ester of caprylphenoxyacetic acid. W. F. Hester and W. E. Craig. 2,437,427, Mar. 9.
Insecticidal compositions from halocaprylphenoxyacetic acid. W. F. Hester and W. E. Craig. 2,437,527, Mar. 9.
Inspection periscope. G. S. Crampton. 2,437,458, Mar. 9.
Insulated wall construction for hulls, deck houses, and the like. A. J. Dawson. 2,437,509, Mar. 9.
Insulator and method of manufacturing same. D. H. Rowland. 2,437,559, Mar. 9.
Insulator and support for electrically charged fence wires. H. M. Behlmann. 2,437,344, Mar. 9.
Insulator, Electric fence. M. V. Redpath. 2,437,613, Mar. 9.
Iron: *See*—
Steam iron.
Isoprene esters. F. D. Jones. 2,437,258, Mar. 9.
Joint: *See*—
Pipe joint. Telescoping joint.
Joint for metal window frames. H. H. Goldberg. 2,437,598, Mar. 9.
Joint, Pipe. C. C. S. Le Clair. 2,437,543, Mar. 9.
Kitchen cabinet. J. Rose. 2,437,665, Mar. 9.
Knitting box. H. S. Chase. 2,437,503, Mar. 9.
Knockdown article and joint therefor. R. H. Anderson. 2,437,494, Mar. 9.
Knockdown metal chair. C. P. Molla. 2,437,303, Mar. 9.
Knockdown wrought iron chair. C. P. Molla. 2,437,304, Mar. 9.
Latch for sofa bed hinges. W. W. Wilson. 2,437,580, Mar. 9.
Latent image intensification with sulfur dioxide. W. J. Weyerts and C. W. Wiederhold. 2,437,412, Mar. 9.
Lathe. O. von Zelewsky. 2,437,570, Mar. 9.
Laundry centrifugal. C. O. Rasmüssen. 2,437,651, Mar. 9.
Leather skiving device. P. Sergio. 2,437,565, Mar. 9.
Lighter. H. C. Sundby. 2,437,623, Mar. 9.
Lighter, Pocket. B. H. Gostkowski. 2,437,354, Mar. 9.
Lighting system and lantern for use therein. P. E. Ferlin and E. Rambusch. 2,437,350, Mar. 9.
Loading machine. W. Whaley. 2,437,629, Mar. 9.
Locator. S. Berman. 2,437,455, Mar. 9.
Lock: *See*—
Electric switch lock.
Lock device. E. N. Jacobi. 2,437,299, Mar. 9.
Locker refrigerating system. W. M. Baird. 2,437,451, Mar. 9.
Loom for weaving pile fabric. E. F. Clark. 2,437,379, Mar. 9.
Loom stop motion. L. M. Rogers. 2,437,406, Mar. 9.
Low-temperature test chamber. A. B. Newton. 2,437,332, Mar. 9.
Machine for forming curved surfaces. E. O. Garnett. 2,437,596, Mar. 9.
Machine tool control. A. J. Hornfeck. 2,437,603, Mar. 9.
Magazine spinning gun for the production of filaments and fabrics. F. W. Manning. 2,437,264, Mar. 9.
Magnetic field measuring device. R. E. Burroughs. 2,437,374, Mar. 9.
Manufacture of anhydrous aliphatic acids from aqueous solutions thereof. H. M. Guinot and P. Chassaing. 2,437,519, Mar. 9.
Manufacture of infusion and injection fluids. A. J. T. Grönwall and B. G.-A. Ingelman. 2,437,518, Mar. 9.
Manufacture of new coloring matters. E. P. Goodings and M. A. T. Rogers. 2,437,465, Mar. 9.
Material-handling apparatus. O. K. Staiger. 2,437,486, Mar. 9.
Metal complexes of pyrazolone azo dyestuffs. R. S. Long and C. E. Lewis. 2,437,645, Mar. 9.
Metal oxide catalyst, Reducing a. J. W. Teter. 2,437,487, Mar. 9.
Meter: *See*—
Differential twin chamber neutron meter. Reflex thermal electric meter.
Meter with cylinders parallel to the drive shaft. D. S. Willson. 2,437,413, Mar. 9.
Mineral feed for animals and producing same. G. B. Smith. 2,437,666, Mar. 9.
Mitigating corrosion in wells. W. F. Oxford, Jr. 2,437,475, Mar. 9.
Mixing device, Fluid. D. P. Hamlet. 2,437,601, Mar. 9.
Motion picture film control device. A. Raskin, I. Fox, and H. Puls. 2,437,553, Mar. 9.
Nitriding. C. F. Floe. 2,437,249, Mar. 9.
Nozzle with fluid pressure-operated safety valve, Telescoping dispensing. A. R. Blink. 2,437,589, Mar. 9.
Oiling sheet metal, Method and apparatus. G. A. Kaufman. 2,437,606, Mar. 9.
Operating automatic frequency control, Intermittently. S. E. Miller. 2,437,268, Mar. 9.
Optical objective. A. Cox. 2,437,505, Mar. 9.
Oscillator controlled follow-up system. C. F. Coake. 2,437,661, Mar. 9.
Oxazolidones and making the same. A. H. Homeyer. 2,437,389, Mar. 9.
Para-tertiary amino phenyl aldehydes. C. D. Wilson. 2,437,370, Mar. 9.
Pedal attachment. S. R. Goodman, Jr. 2,437,320, Mar. 9
Petroleum crudes, Converting. E. H. Records. 2,437,439, Mar. 9.
Phasing network. N. W. Aram. 2,437,496, Mar. 9.
Phenols from hydrocarbon distillates by steam distillation, Separation of. D. W. Milner. 2,437,649, Mar. 9.
Phonographic apparatus. D. C. Rockola and I. Gil. 2,437,557, Mar. 9.
Pickup and delivery container. H. W. Ballard. 2,437,372, Mar. 9.
Pickup equipment, Emergency. W. H. Setz. 2,437,619, Mar. 9.
Picker, Drop box. H. M. Bacon. 2,437,342, Mar. 9.
Plant, Concrete mixing. G. Maxon, Jr. 2,437,302, Mar. 2.
Plant, Hydraulic. M. F. Gunning. 2,437,520, Mar. 2.
Plant, Jet propulsion. F. B. Halford. 2,437,385, Mar. 9.
Plastic contact lenses, Making. J. E. Mullen. 2,437,436, Mar. 9.
Plates for runways in spiral chutes and the like, Forming. F. Kautz. 2,437,259, Mar. 9.
Pliers, Cable bending. E. P. McNair. 2,437,433, Mar. 9.
Plotting and computing device. R. P. Curtis. 2,437,243, Mar. 9.
Plow assembly mount. R. J. Wray. 2,437,581, Mar. 9.
Plug and fuse attachment. J. R. S. Arentz. 2,437,635, Mar. 9.
Pocketbook having all exposed surfaces finished. M. Jackler. 2,437,534, Mar. 9.
Polymerization of substituted indene. F. J. Soday. 2,437,278, Mar. 9.
Post binder mechanism. J. Schade. 2,437,617, Mar. 9.
Power excavating apparatus. L. N. Walter. 2,437,572, Mar. 9.
Precision radio remote control system. E. L. Rockwood. 2,437,558, Mar. 9.
Preparation for the care of the skin. F. Schaaf. 2,437,561, Mar. 9.
Preparation of dipentaery-thritol hexanitrate. J. A. Wyler. 2,437,582, Mar. 9.
Preparation of improved drying oils. E. S. Barnitz. 2,437,343, Mar. 9.
Pressure gage and switch, Balanced. D. L. Rigden. 2,437,440, Mar. 9.
Pressure switch. W. L. W. Ogden and W. R. Ryan. 2,437,473, Mar. 9.
Process and die for extruding tubular plastic products. G. F. Taylor. 2,437,625, Mar. 9.
Production of filaments from solids, Method and apparatus for the. F. W. Manning. 2,437,263, Mar. 9.
Products of cholesteryl esters with polyethylene glycol and producing same, Condensation. L. L. Lerner. 2,437,261, Mar. 9.
Projector control device, Movie. G. K. Gould. 2,437,252, Mar. 9.
Propeller for airships and housing therefor, Auxiliary. M. Gliwa. 2,437,353, Mar. 9.
Protector for boilers, Seam. J. E. Anderson. 2,437,634, Mar. 9.
Puller: *See*—
Weed puller.
Pulses of modulated current, Supplying. P. N. Bossart. 2,437,315, Mar. 9.
Pump. R. F. Urso. 2,437,568, Mar. 9.
Push button switch. G. L. Rees. 2,437,555, Mar. 9.
Quick-freezing foods, Method and apparatus for. J. A. Archbald, Jr. 2,437,414, Mar. 9.
Radar device. M. K. Witt. 2,437,286, Mar. 9.
Radio dial display device. M. Ramsay. 2,437,306, Mar. 9.
Radio direction finder and homing device, Stabilized. C. A. Frische, T. M. Ferrill, Jr., and J. M. Slater. 2,437,251, Mar. 9.
Ramp, Vehicle loading. E. C. Price. 2,437,479, Mar. 9.
Range Electric. W. J. Carter. 2,437,376, Mar. 9.
Rattrap. A. C. Fleig. 2,437,248, Mar. 9.
Razor blade holder. W. Tischendorf. 2,437,337, Mar. 9.
Receptacle: *See*—
Flexible pocket receptacle.
Reciprocatory motion, Effecting. P. R. Hoopes. 2,437,530, Mar. 9.
Reclaiming used metal molds. C. R. Tinsley. 2,437,626, Mar. 9.
Recorder, Hangfire. H. Smith and J. V. Dunham. 2,437,276, Mar. 9.

Refining of hydrocarbon oil containing mercaptans. K. M. Brown and C. G. Gerhold. 2,437,348, Mar. 9.
Reflex thermal electric meter. M. E. Ames, Jr., and D. E. Sunstein. 2,437,449, Mar. 9.
Refrigerating and air conditioning apparatus. E. D. Bookman. 2,437,417, Mar. 9.
Refrigerator and maintaining the compartments thereof at different temperatures. H. K. Johnson. 2,437,257, Mar. 9.
Reinforcing tabs for loose-leaf sheets, Strip of severable. C. E. Hedrick, Sr. 2,437,640, Mar. 9.
Resin compositions, Heat-stable plasticized. H. J. West and H. M. Enterline. 2,437,657, Mar. 9.
Roentgenographic inspection, Method of and apparatus for. J. J. Moynihan. 2,437,472, Mar. 9.
Roller, Top spinning. J. Rockoff. 2,437,362, Mar. 9.
Roof, Lifter. H. C. Boardman. 2,437,238, Mar. 9.
Rosin derivatives. A. L. Rummelsburg. 2,437,481, Mar. 9.
Rubber compositions containing octadecane nitrile. J. H. Kelly, Jr. 2,437,538, Mar. 9.
Ruler, Parallel. J. Lachmund. 2,437,469, Mar. 9.
Safety attachment for billfolds. H. E. Stonebraker. 2,437,566, Mar. 9.
Sanding device for railway rolling stock. N. E. Gee. 2,437,384, Mar. 9.
Scanning reference generator. M. Skene and C. H. Gulles. 2,437,275, Mar. 9.
Scoop board for vehicle boxes. C. B. Richey. 2,437,614, Mar. 9.
Scraper, Meat. N. Gambino and N. LaRosa. 2,437,316, Mar. 9.
Selective disconnection of aileron controls. R. A. Flynn. 2,437,250, Mar. 9.
Separation of neutral fat from tall oil. A. G. Houpt. 2,437,643, Mar. 9.
Separator: *See*—
Dust separator.
Setscrews in bearing innerraces, Retaining. A. G. Nickle. 2,437,305, Mar. 9.
Shade, Lamp. M. S. Brockman. 2,437,292, Mar. 9.
Sharpening device for lawn mowers. A. Sporket. 2,437,443, Mar. 9.
Sight for firearms. E. C. Smith. 2,437,363, Mar. 9.
Skid runner attachment for vehicles. R. D. Stryker. 2,437,622, Mar. 9.
Slicing, cutting, and core-removing machine. E. W. Bridge. 2,437,637, Mar. 9.
Slitting and punching attachment for piece-end sewing machines. W. N. Hadley. 2,437,662, Mar. 9.
Slot, Air tight mail. P. T. Gable and W. C. Weiss. 2,437,319, Mar. 9.
Snowplow. R. B. Bourne. 2,437,291, Mar. 9.
Social and business card display, Cooperative. C. V. Berry. 2,437,415, Mar. 9.
Solvent extraction of hydrocarbons. A. C. McKinnis. 2,437,357, Mar. 9.
Sound reverberating device. J. D. Stack. 2,437,445, Mar. 9.
Space discharge device. W. C. Brown. 2,437,240, Mar. 9.
Specific gravity indicator. K. Fischer. 2,437,247, Mar. 9.
Spectacles. F. C. P. Henroteau. 2,437,642, Mar. 9.
Speed governor. R. R. Lobosco. 2,437,301, Mar. 9.
Splice, Cable. R. N. Mowery. 2,437,358, Mar. 9.
Spotlight. H. Handler. 2,437,522, Mar. 9.
Stabilizing methyl-substituted polysiloxanes. C. A. Burkhard and W. I. Patnode. 2,437,501, Mar. 9.
Steam generators and automatic feed systems for such generators, Regulating. J. Loumiet et Lavigne. 2,437,327, Mar. 9.
Steam iron. G. Waage. 2,437,571, Mar. 9.
Steel wool machine. G. B. Galvin. 2,437,424, Mar. 9.
Steering device. E. B. White. 2,437,575, Mar. 9.
Steering gear for wheeled vehicles. T. A. Bowe. 2,437,590, Mar. 9.
Stroboscopic light valve checking machine. J. P. Corcoran. 2,437,419, Mar. 9.
Stud and installation thereof. E. R. Evans. 2,437,638, Mar. 9.
Suction device for removing dust from fabric or the like. A. J. Zugehoer. 2,437,340, Mar. 9.
Sulfofluorides of azoic dyestuffs. H. Z. Lecher, R. P. Parker, and C. M. Hofmann. 2,437,644, Mar. 9.
Support: *See*—
Bedspring support.
Support. J. K. Wood. 2,437,631, Mar. 9.
Surgical instrument for curetting. F. J. Moore. 2,437,329, Mar. 9.
Switch: *See*—
Pressure switch. Push button switch.
Swivel harness, Child's. B. Zimmern. 2,437,585, Mar. 9.
Synchronous driving apparatus. L. J. Koci. 2,437,892, Mar. 9.
Synthesis of aldehydes. W. F. Gresham, R. E. Brooks, and W. M. Bruner. 2,437,600, Mar. 9.
Tamping roller, Self-propelled. J. F. Harrison and C. F. Greiner. 2,437,524, Mar. 9.
Tampon, sanitary napkin, surgical dressing, insulating material, filter cartridge, upholstery, and the like. F. W. Manning. 2,437,265, Mar. 9.
Tank: *See*—
Flush tank.
Telemetering transmitter. R. A. Cole and D. I. Smith. 2,437,242, Mar. 9.
Telephone stand and memo pad and pencil, Combination illuminated. S. J. Beltch and S. Fine. 2,437,237, Mar. 9.
Telescopic firearm. G. W. Patchett. 2,437,548, Mar. 9.
Telescoping joint. A. V. Ditty. 2,437,510, Mar. 9.
Television image tube. M. Cawein. 2,437,418, Mar. 9.
Temperature compensated variable inductance. J. F. Bell. 2,437,345, Mar. 9.
Temperature control system. R. H. Hunter. 2,437,468, Mar. 9.
Thermal control for gluing structural assemblies and other purposes. H. Ulanet. 2,437,488, Mar. 9.
Thiamin dioctyl sulfo succinate. J. B. Conn. 2,437,504, Mar. 9.
Time controlling mechanism. C. E. J. Nilson. 2,437,401, Mar. 9.
Timing device. M. H. Rhodes. 2,437,556, Mar. 9.
Tire mounting apparatus, Circumferentially travelling roller type, support mounted. I. J. Ekse. 2,437,512, Mar. 9.
Tool: *See*—
Abrading tool. Drill and countersink tool.
Tool. H. S. Forsberg. 2,437,296, Mar. 9.
Tool. R. Martines. 2,437,432, Mar. 9.
Tool for cutting insulation on electric conductors. G. G. Givens. 2,437,514, Mar. 9.
Tool handle fastening. G. R. Hess. 2,437,426, Mar. 9.
Toroidal winding machine. J. G. Veatch. 2,437,309, Mar. 9.
Tower, Cooling. E. W. Simons. 2,437,484, Mar. 9.

2-chloroethylcyclopropyl ether and preparing it. R. M. Vance and A. G. Horney. 2,437,368, Mar. 9.
2-oxazolidone compounds and preparing the same. A. H. Homeyer. 2,437,388, Mar. 9.
2-oxazolidone compounds and preparing the same. A. H. Homeyer. 2,437,390, Mar. 9.
Undergarment for ladies or children. E. Donaldson and J. Gibney. 2,437,511, Mar. 9.
Valve: *See*—
Demand valve.
Valve. C. A. Pugh, D. G. Booth, and R. W. Rough. 2,437,480, Mar. 9.
Valve construction. F. A. Quiros. 2,437,552, Mar. 9.
Valve-in-head rotary internal-combustion engine embodying a rotary piston with radial sliding vanes and having a combustion chamber in the head. E. W. Rich. 2,437,653, Mar. 9.
Valve mechanism for actuating the distributing valve of an expansible chamber motor, Quick-acting. V. G. Klein and R. F. Schneller. 2,437,391, Mar. 9.
Vanity case. F. M. Williamson. 2,437,578, Mar. 9.
Variable incidence wing control for aircraft of the rotary wing or airplane sustained type. A. S. Mullgardt. 2,437,330, Mar. 9.
Variable-speed drive for propellers. E. R. Herring and C. P. Sander. 2,437,467, Mar. 9.
Variable speed transmission. H. Klaucke. 2,437,540, Mar. 9.
Vehicle windshield construction. H. A. Hicks. 2,437,664, Mar. 9.
Vending machine. R. T. Wright. 2,437,311, Mar. 9.
Vibrator attachment for electric razor actuating instruments. O. R. Palmer, Jr. 2,437,402, Mar. 9.
Vise, Quick adjustable bench. J. A. and J. Follmer. 2,437,351, Mar. 9.
Voting machine. A. N. Gustavson. 2,437,521, Mar. 9.
Vulcanizable copolymers of a vinyl aryl compound, butadiene, and vinyl ethers. G. F. D'Alelio. 2,437,420, Mar. 9.
Vulcanizable copolymers of acrylonitrile, butadiene, and vinyl ethers. G. F. D'Alelio. 2,437,421, Mar. 9.

Washing machine, Clothes. J. G. Becker. 2,437,636, Mar. 9.
Weaving, Method of and apparatus for. E. F. Clark. 2,437,378, Mar. 9.
Weed puller. L. F. Kramer. 2,437,393, Mar. 9.
Weighting motion for drafting rollers. J. Schofield, Jr. 2,437,562, Mar. 9.
Welding rod holder. R. R. Reddick. 2,437,652, Mar. 9.
Wheel for vehicles, Track. O. Singer. 2,437,407, Mar. 9.
Windmill. R. D. Bourne. 2,437,346, Mar. 9.
Wire-contacting insulator assembly, Reinforced. R. Case. 2,437,593, Mar. 9.
Wire pay-off mechanism. M. F. Williams and S. B. Galit. 2,437,630, Mar. 9.
Work-holding and guiding mechanism for sewing machines. I. Sutker. 2,437,624, Mar. 9.
Wrapping paper control mechanism. O. Sandberg. 2,437,560, Mar. 9.
Wrench with oppositely-threaded screw adjustment, Sliding jaw. T. L. Mayrath. 2,437,267, Mar. 9.

CLASSIFICATION OF PATENTS

ISSUED MARCH 9, 1948

In view of the fact that the issue is being checked weekly by the Classification Division, the class and subclass in this list are correct as of this date. Where there is a discrepancy between the classification given in the patent head and the classification in this list, the classification of this list governs.

NOTE.—First number—class, second number—subclass, third number—patent number

2— 30: 2,437,654

No. 9430

SAMUEL J. COHEN

v.

AMOS T. KNUTSON ET AL.

[164 F.2d 497; 74 USPQ 324]

Argued April 11, 1947. Decided September 15, 1947

1. INTERFERENCE—SUIT UNDER R. S. 4915—ISSUES INVOLVED.

While it is true that in a direct appeal from a decision of the Patent Office in an interference proceeding only the question of priority is involved, this is not true in equity suits brought in the district court under sec. 4915 R. S., because of the rule established by the Supreme Court in *Hill* v. *Wooster*, 132 U. S. 693; that no decree should authorize the issuance of a patent to either party to the interference unless invention is present.

2. SAME—SAME—PATENTABILITY AN ISSUE.

Patentability is a proper issue in a proceeding under section 4915 R. S. and, if raised, must be decided, even though the Patent Office decision from which the case arose was in an interference proceeding.

3. PATENTABILITY—ELEMENTS THEREOF.

The elements of patentability as provided by the statute are not one but several. They include not only a patentable subject matter but also other characteristics, among them novelty. The invention must be "new" and "not described in any printed publication" before the claimed invention. In addition, the statute provides that the person who has invented the new art, etc., may obtain a patent and thus confines patentability to that one person.

4. INTERFERENCE—SUIT UNDER R. S. 4915—PATENTABILITY AS TO PRIOR ART AND PERSON.

Under the general rule that the court in an action under R. S. 4915 must determine patentability, the court must determine the disputed features of patentability in this case, which are (1) whether the claims are patentable over the disclosures in prior art references, and (2) whether the several claims are patentable to different persons.

5. SAME—SAME—QUESTIONS OF SCIENTIFIC FACT.

This court cannot decide questions of scientific fact upon the basis of its own knowledge or upon standard generalized authorities, in the absence of findings of fact by the district court or the Patent Office based upon evidence in the record.

6. SAME—RULE 95—PRESUMPTION OF PATENTABILITY.

Though decisions required by Rule 95 as to patentability and as to the ability of each party to make the counts are within the duties of the Primary Examiners, subject to review by the Board of Appeals, and though as to each of the eleven counts involved in the four interferences, it was affirmatively recited, in general terms, by the Primary Examiner or by the Board that both requisites were fulfilled, *Held* that we cannot accept these rulings as controlling upon the question of patentability over a particular patent or to particular persons.

Vol. 608 • No. 2 Tuesday, March 9, 1948 Price $16 per year

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscriptions, $16.00 per annum, including annual index, $18.75; single numbers, 35 cents each.

PRINTED COPIES OF PATENTS are furnished by the Patent Office at 25 cents each; copies of TRADE-MARKS and DESIGNS at 10 cents each. Address orders to the Commissioner of Patents, Washington 25, D. C.

CIRCULARS OF GENERAL INFORMATION concerning PATENTS or TRADE-MARKS will be sent without cost on request to the Commissioner of Patents, Washington 25, D. C.

7. SAME—SAME—SAME.

We will not infer from the bare announcement that a given claim is "allowable," that the Examiner or the Board meant to find that the claim was patentably distinct from another claim not involved in that proceeding, or that he, or it, meant to find patentability over a prior art reference which was not mentioned.

8. SAME—GENERIC AND SPECIFIC COUNTS.

Though it may very well be that the counts are so distinct as that the holder of a patent on the generic "composition of matter" is entitled to state separately in the same patent a claim to specified uses of the same substance, in which sense, the two claims may be patentably distinct, *Held* that it does not follow that they are so distinct as to authorize the issuance of separate patents to separate persons.

9. INTERFERENCE—SUIT UNDER R. S. 4915—FINDING OF PATENTABILITY NECESSARY.

In action under R. S. 4915, where district court made no findings of fact except to say that the findings of the Patent Office would not be disturbed, and such findings did not indicate patentability over a particular prior art patent or to particular inventors, *Held* that the case will be reversed and remanded for further findings of fact by the trial court with respect to the underlying chemical facts which will support conclusions of fact as to the patentability of each of the counts involved in this appeal.

10. SUITS UNDER R. S. 4915—PROCEDURE IN ASCERTAINING AND FINDING SCIENTIFIC FACTS.

When a court is required to adjudicate rights based upon the premise of scientific facts, it ought not to be restricted to partisan or chance evidence, and if witnesses presented by the parties are not of a calibre to be satisfactory in the presentation of scientific data, the court should exercise the full extent of its control over the proceedings to insure its own accurate understanding of the requisite facts, as by suggesting to the private parties the necessity for disinterested, qualified evidence, obtaining an agreed statement of the underlying scientific facts, or, as a last resort, exercising the power of subpoena sua sponte.

11. SAME—SAME.

It would be helpful if the trial court could remand the cases to the Patent Office for further findings of fact, but we have been unable to find authority for such a remand in a proceeding under section 4915.

12. INTERFERENCE — REDUCTION TO PRACTICE — LUBRICANT—CRITERIA.

In establishing a reduction to practice of a lubricant, *Held* that both laboratory tests and actual service tests are necessary, but *Held* that since the cases are remanded for further findings, the district court will not be foreclosed upon this point of fact, but findings upon this point should be made.

13. SAME—SAME—SAME—SAME.

Mere mixing of the two ingredients, lubricating oil and a chlorinated paraffin hydrocarbon, without more, *Held* not a demonstrated equivalent to a reduction to practice, since it was necessary that it be demonstrated that the mixture possessed usefulness as a lubricant not possessed by the oil alone, and that tests were thus necessary.

14. SUITS UNDER R. S. 4915—NEW EVIDENCE.

Though the rule is well settled that new and additional evidence may be received in a civil action under section 4915, and it is equally well settled that a party may not successfully offer to the court evidence withheld from the Patent Office, *Held* that where the evidence is of facts scientific in nature and where such evidence would assist the court, it should not consider itself bound by a rule excluding evidence not offered to the Patent Office.

APPEALS from the District Court of the United States for the District of Columbia.

REVERSED AND REMANDED.

Mr. Oscar C. Limbach, of the Bar of the State of Ohio, pro hac vice, by special leave of Court, with whom *Mr. Almon S. Nelson* was on the brief, for Amos T. Knutson et al.

Mr. William D. Burrows, of the Bar of the State of New York, pro hac vice, by special leave of Court, with whom *Mr. Vernon M. Dorsey* was on the brief, for Samuel J. Cohen.

Mr. Benjamin B. Schneider, with whom *Messrs. Lee B. Kemon, R. J. Dearborn, Daniel Stryker* and *Max Dressler* were on the brief, for Jimmiebel Gallsworthy and The Texas Company.

Mr. Edwin R. Hutchinson entered an appearance for appellees John W. Wolfe et al.

Mr. Edwin L. Reynolds, United States Patent Office, entered an appearance for appellee Casper W. Ooms.

Before EDGERTON, WILBUR K. MILLER and PRETTYMAN, Associate Justices

PRETTYMAN, *J.:*

These are nine appeals from judgments in six[1] civil actions brought in the district court under R. S. 4915,[2] praying authorizations for the issuance of patents. The actions were consolidated for trial below and for argument and decision here. The invention is a chemical composition suitable as an extreme pressure lubricant. The controversies arose in four interference proceedings among applicants in the Patent Office, finally involving eleven claims or counts. Priority as to one count was awarded by the Patent Office to applicants Morell et al.,[3] as to three counts to applicant Cohen, and as to the other seven counts to applicant Gallsworthy. The district court reached and entered conclusions that Cohen and Gallsworthy were entitled to receive patents upon all counts awarded to them by the Patent Office and that Gallsworthy was entitled to receive a patent on the count initially awarded to Morell. It therefore dismissed all the bills of complaint, together with the cross-claims and counterclaims, except that in one action[4] it reversed the decision of the Patent Office and authorized the issuance of a patent to Gallsworthy on the one claim which had been awarded by the Patent Office to Morell. The latter's motion to reopen was denied.

[1] We are met first with the question whether the court must decide in this proceeding the patentability of the several claims involved. It is true that in a direct appeal from a decision of the Patent Office in an interference proceeding, only the question of priority is involved,[5] but this is not true in equity suits brought in the district court under section 4915.[6] This latter rule—specifically that no decree should authorize the issuance of a patent to either party to the interference unless invention is present—was established by the Supreme Court in 1890 in *Hill* v. *Wooster*.[7] That case was referred to and distinguished recently in *Hoover Co.* v. *Coe*,[8] but it is not our understanding that it was overruled, although there is language in the later opinion which may reflect a view contrary to the earlier one. For example, the Court said that "the effect of adjudication in equity [is] the same as that of decision on appeal,"[9] which would seem to imply that in an R. S. 4915 proceeding the court might decide one question—such as priority—and leave all other questions for other determination, as does the Court of Customs and Patent Appeals.[10] Again, the Court referred to cases in which Federal courts have taken jurisdiction under section 4915, "where it affirmatively appeared that further proceedings in the Patent Office would be necessary following adjudication in favor of the applicant, and where though it did not appear of record that further proceedings would be required in the Patent Office, it was evident that they might ensue adjudication, as where a patent was denied for want of invention."[11] We have reexamined the cases cited by the Court to the foregoing, but in none of them does it appear that the trial court declined to pass upon an issue raised in the pleadings before it. *Hoover Co.* v. *Coe*, supra, was concerned with jurisdiction to entertain a complaint, and not with jurisdiction over questions raised by the pleadings once the action itself is held proper. The answer to the specific question involved seems to be the full extent of the decision of the Supreme Court. The Court left the rull of *Hill* v. *Wooster*, supra, intact, distinguishing that case by saying:

"That case was one in which the Commissioner had decided an interference between the claims of two applicants in favor of one of them, and ordered that a patent issue. In an inter partes suit by the unsuccessful applicant against the successful one, this Court held that if it appeared that neither application disclosed invention (a matter which should have moved the Commissioner not to declare an interference) the bill should be dismissed. The Court did not purport to decide what Patent Office rulings are reviewable under R. S. 4915."

Moreover, in a footnote, the Court said:

"Section 16 of the act of 1836, 5 Stat. 123, supra, expressly provided that upon a bill filed as a result of Patent Office decision on an interference the court might adjudge either of the patents void in whole or in part. This language was evidently omitted in later acts as surplusage, for obviously if either patent was void for lack of invention or other cause, the question of interference disappeared."

This last-quoted language is a clear indication that if there be a dispute as to the validity of a patent upon an application involved in an interference proceeding, the Court must not enter an affirmative decree unless it finds that invention is present. We note also that the Court referred with apparent approval to the decision of this court in *Radtke Patents Corp.* v. *Cole*,[12] in which we held that if an issue as to patentability is raised in the district court in an action under R. S. 4915, it must be decided. In the case at bar, the issue of patentability was raised in the district court and is raised here, and so must be decided.

[2] We fully realize that the consequences of the rule just indicated, when coupled with the doctrine of res judicata, may be far-reaching. That doctrine imposes finality of decision not only upon issues actually raised but upon issues which might have been raised. *Fishgold* v. *Sullivan Drydock & Repair Corp.*, 328 U. S. 275, 282, 90 L. Ed. 961, 66 S. Ct. 1105 (1946). Thus, it would seem that if any question as to the issuance of a patent can be raised in a section 4915 proceeding, all questions as to that issuance would be foreclosed by the decision, in so far as the parties to the proceeding are concerned. We also realize that the consequences of res judicata in these circumstances may be in conflict with implications in *Hoover Co.* v. *Coe*, supra, that further proceedings in the Patent Office may occur after judgment in a section 4915 proceeding. But we do not have a res judicata question before us. We go only so far as to say that patentability is a proper issue in a proceeding under section 4915 and, if raised, must be decided, even though the Patent Office decision from which the case arose was in an interference proceeding. Nonpatentability is "a matter which should have moved the Commissioner not to declare an interference."[13]

Upon these appeals, Morell contends that none of the claims involved is patentably distinct from the disclosures of a so-called "Lincoln patent"[14] and that certain of the claims are unpatentable over others. Cohen makes the same contention as to the Lincoln patent and also says that none of the claims is patentable over the broad claim titled "composi-

[1] Civil Actions Nos. 19,801, 20,052 and 20,053, appealed by Morell and by Cohen; Nos. 23,872, 23,873 and 23,874, appealed by Morell.

[2] Rev. Stat. § 4915 (1870), 53 Stat. 1212 (1939), 35 U. S. C. A. § 63 (1940).

[3] Morell et al., were LeGrand Morell and Amos T. Knutson and their assignee. Their interest was designated in the Patent Office as "Morell et al.," and we shall designate it "Morell" in this opinion. LeGrand Morell now being deceased, this interest is named in the captions of these appeals and in the briefs as "Amos T. Knutson et al."

[4] Civil Action No. 19,801.

[5] This was the rule under the old procedure, when the direct appeal was to the Supreme Court of the District of Columbia and, by later statute to this court. *Frasch* v. *Moore*, 211 U. S. 1, 53 L. Ed. 65, 29 S. Ct. 6 (1908); *Hill* v. *Hodge*, 12 App. D. C. 528 (1898); *Lynch* v. *Headley*, 52 App. D. C. 269, 285 Fed. 1003 (1923), 307 O. G. 737; *Prichard* v. *Setzler*, 54 App. D. C. 266, 296 Fed. 1013 (1924), 321 O. G. 706. It is still the rule under the new procedure, where direct appeal is to the Court of Customs and Patent Appeals. *Hendrickson & Nelson* v. *Ronning*, 76 F.2d 137 (CCPA 1935), 458 O. G. 4; *Walsh* v. *Davidson*, 101 F.2d 224 (CCPA 1939), 502 O. G. 569; *Rava* v. *Charlton*, 105 F.2d 798 (CCPA 1939), 509 O. G. 3; *Mantz* v. *Jackson*, 140 F.2d 161 (CCPA 1944), 561 O. G. 3; *Koch* v. *Lieber*, 141 F.2d 518 (CCPA 1944), 564 O. G. 539.

[13] *Hoover Co.* v. *Coe*, supra at 90.

[14] Patent No. 1,945,615, issued February 6, 1934, upon an application filed July 14, 1932, by Bert H. Lincoln and Alfred Henriksen.

tion of matter" and designated as Count 1 in Interference No. 78,460. Gallsworthy contends that the counts in the several interferences obviously differ in scope, that the Lincoln patent does not in fact disclose the subject matter of the claims here involved, and that all questions as to patentability were decided by the Patent Office and the district court, the findings of which were supported by substantial evidence.

[3] The elements of patentability as provided by the statute[15] are not one but several. They include not only a patentable subject matter but also other characteristics, among them novelty. The invention must be "new" and "not described in any printed publication" before the claimed invention. It is not disputed in the present case that the subject matter of the claimed invention is within the patentable matters enumerated in the statute, but a dispute is presented as to the novelty of these claims in view of the prior art, the core of the dispute being the effect of the disclosures in certain publications prior to the pending applications. In addition, the statute, in prescribing the basic requisites to the issuance of a patent, provides that the person who has invented the new art, etc., may obtain a patent, and thus confines patentability to that one person. That consideration is pertinent to patentability in the present case, because a dispute exists here as to whether one person can obtain a patent on a specific claim to a composition of matter which is identical in its ingredients with a generic claim patented to another. The question is whether the eleven claims in the case involve only one invention and are therefore patentable to only one inventor,[16] or whether they involve several inventions, of which there may be different inventors. [4] Thus, the disputed features of patentability in this case are (1) whether the claims are patentable over the disclosures in prior art references and (2) whether the several claims are patentable to different persons. We think that under the general rule that the court, in an action under R. S. 4915, must determine patentability, the court must determine these disputed features of patentability, just as it might have to decide any other disputed issue concerning invention. This requirement of decision by the court rests not only upon the authorities above mentioned, but also upon reason. A court could not, as required by section 4915, adjudge that a named person "is entitled, according to law, to receive a patent for his invention" if in demonstrable fact the statute does not permit the patent to that person. We are not dealing with the problem of prior art references newly discovered after the court's adjudication,[17] but with issues present in the case from its inception. To hold otherwise would be to hold that the court should decide one issue presented to it but close its eyes to others equally determinative of the ultimate adjudication.

The district court made no findings upon the subject of patentability in the present case except to say that, no new evidence having been introduced in that court, the finding of the Patent Office upon that matter would not be disturbed.[18] In this absence of underlying findings by the district court, and in the presence of that court's specific adoption of the conclusion of the Patent Office, we turn back to the findings of the Patent Office for a basis of decision upon the point. The records of the proceedings in the Patent Office are in the present record as exhibits. But we are unable to find in the Patent Office records either definitive conclusions of patentability, in terms of the controverted issues, or findings of the underlying facts from which a definitive conclusion could be reached.

The "Lincoln patent" application, filed July 14, 1932, disclosed[19] a high-pressure lubricant which consisted of an ordinary lubricant plus halogenized high boiling hydrocarbons, or, more specifically, 1% chlorinated hydrocarbon wax with a melting point of about 130° F., the wax being from animal, vegetable or petroleum origin. The eleven counts in the present proceeding are variously titled. The chief component in all of them is an ordinary lubricating oil, and the additives in them are all chlorinated. But these additives are described, respectively, as a paraffin hydrocarbon, a fluid fraction of petroleum, non-volatile mineral oil, mineral lubricating oil, lubricating oil free from sulphur, mineral oil, and kerosene.[20] In the Patent Office, priority as to the claim for "A composition of matter" of which the ingredients were a mineral lubricating oil and a non-volatile chlorinated paraffin hydrocarbon (Count 1 in Interference No. 78,460), was awarded to Morell. At the same time, a claim, likewise titled "A composition of matter," consisting of a mineral lubricating oil and "chlorine in chemical combination with a fluid fraction of petroleum" (Count 2 in Interference No. 78,460), was awarded to Gallsworthy. And two counts titled "A metal cutting composition"—but identical in ingredients with the two foregoing counts—(Counts 2 and 5 in Interference No. 75,209), were awarded to Cohen. A count titled "A lubricating composition," of which the ingredients were an unchlorinated mineral lubricating oil and a chlorinated mineral lubricating oil (Count 2 in Interference No. 69,703), was awarded to Gallsworthy. Whether the claims awarded by the Patent Office to the three different persons, are patentably distinct from each other, so as to be patentable to different persons, is obviously a question of fact. And so is the question whether these claims, or any of them, are patentably distinct from the disclosures in the Lincoln patent.

[15] Rev. Stat. § 4886 (1870), 29 Stat. 692 (1897), 46 Stat. 376 (1930), 53 Stat. 1212 (1939), 35 U. S. C. A. § 31 (1940).

[16] I. e., the first inventor of the one invention. *Milburn Co.* v. *Davis-Bournonville Co.*, 270 U. S. 390, 402, 70 L. Ed. 651, 46 S. Ct. 324 (1926), 344 O. G. 817; *Earles* v. *Gomber*, 50 App. D. C. 389, 273 Fed. 353 (1921), 288 O. G. 207; *International Seal & K. Protector Co.* v. *E. J. Brooks Co.*, 98 F.2d 647, 648 (C. C. A. 3d 1938); *International Carbonic Eng. Co.* v. *Natural Carb. Prod.*, 57 F. Supp. 248, 258 (S. D. Calif. 1944), aff'd, 158 F.2d 285 (C. C. A. 9th, 1946); Application of Beck, 155 F.2d 398 (CCPA 1946), 590 O. G. 357.

[17] *Gold* v. *Newton*, 254 Fed. 824 (C. C. A. 2d 1918) (cited to this point in *Hoover Co.* v. *Coe*, supra).

[18] The finding in Civil Action No. 23,872 was:

"That no substantial evidence has been presented to overcome the findings in the Patent Office that the subject matter of the counts of the aforesaid interference are patentable."

The finding of fact in Civil Actions Nos. 19,801, 20,052, 20,053, 23,873 and 23,874 was:

"The Patent Office, in the proceedings before it, found the subject matters of the various counts of the interferences Nos. 78,460, 69,703 and 77,416 to be patentable and to distinguish patentably from each other. No substantial evidence has been presented in any of the cases consolidated for trial to overcome these findings in the Patent Office. The only art presented at the trial in these cases was before the Patent Office and was fully considered by it."

The conclusion of law in the latter cases was:

"The evidence presented, in any of the cases, on the patentability of the counts to the parties, or any of them, is not substantial and does not overcome the findings in the Patent Office that the subject matters in the several counts involved in the interferences are patentable."

[19] *Milburn Co.* v. *Davis-Bournonville Co.*, 270 U. S. 390, 70 L. Ed. 651, 46 S. Ct. 324 (1926), 344 O. G. 817, followed, *Detrola Corp.* v. *Hazeltine Corp.*, 313 U. S. 259, 265, 85 L. Ed. 1319, 61 S. Ct. 948 (1941), 528 O. G. 245, rehearing denied, 314 U. S. 576, 86 L. Ed. 564, 62 S. Ct 52 (1941); cf. *Old Town Ribbon & Carbon Co.* v. *Columbia R. & C. Mfg. Co.*, 159 F.2d 379, 381, 382 (C. C. A. 2d 1947).

[20] The counts or claims in issue were:

Interference No. 78,460—

"1. A composition of matter comprising a mineral lubricating oil and a relatively small proportion of a substantially non-volatile chlorinated paraffin hydrocarbon as essential ingredients."

"2. A composition of matter comprising a mineral lubricating oil and a small percentage of chlorine in chemical combination with a fluid fraction of petroleum, the compounds formed being substantially non-volatile."

Interference No. 69,703—

"1. A lubricant suitable for lubrication under extreme pressures comprising essentially mineral oil and a small percentage of chlorine in chemical combination with non-volatile mineral oil, the compounds formed being also non-volatile."

"2. A lubricating composition having as a primary lubricating constituent the combination of unchlorinated mineral lubricating oil and a minor proportion of chlorinated mineral lubricating oil."

"3. An extreme pressure lubricant comprising as a primary lubricating constituent the combination of unchlorinated mineral lubricating oil and a minor proportion of chlorinated lubricating oil, the lubricant being free from added sulphur."

Interference No. 77,416—

"1. An extreme pressure lubricant for use between relatively moving metallic surfaces, comprising a body of refined mineral lubricating oil, the ability of which to prevent seizure and scoring between relatively moving metallic surfaces operating under conditions of extreme pressure, has been substantially increased by the addition thereto of a minor amount of chlorinated mineral oil."

"2. The method of improving a body of refined mineral lubricating oil to very substantially increase its ability to prevent seizure and scoring when used as a lubricant between relatively moving metallic surfaces operating under conditions of extreme pressure, which comprises dissolving in said body a small amount of chlorinated mineral oil."

"3. The method of reducing the friction between relatively moving metallic surfaces which comprises maintaining therebetween a film of lubricating oil and at the same time chemically acting upon such surfaces by means of chlorine present in said oil film in the form of a minor amount of chlorinated mineral oil."

Interference No. 75,209—

"1. A metal cutting composition comprising a mineral lubricating oil and a relatively small proportion of chlorinated kerosene as essential ingredients."

"2. A metal cutting composition comprising a mineral lubricating oil and a relatively small proportion of a substantially non-volatile chlorinated paraffin hydrocarbon as essential ingredients."

"5. A metal cutting composition comprising a mineral lubricating oil and a small percentage of chlorine in chemical combination with a fluid fraction of petroleum, the compounds formed being substantially non-volatile."

Fundamentally these questions of fact are questions of chemistry. But we do not find in this record any conclusions couched in chemical terms. The closest approach to one is a statement of the Board of Interference Examiners in Interference No. 78,460 when it awarded one count to Morell and the other to Gallsworthy. The Board said: "The former [Count 1] of these limitations is believed to include any chlorinated paraffin hydrocarbon which is non-volatile after chlorination. In the case of Count 2, on the other hand, it is clearly specified that the fraction of petroleum to be chlorinated, shall be fluid prior to such chlorination step." The language quoted seems to mean that a paraffin hydrocarbon which would be non-volatile after chlorination could not be a fluid fraction of petroleum prior to chlorination. But there is nothing in the way of a basic finding of fact to show that this scientific implication is correct, and the chemistry reflected by general authorities seems to indicate the contrary.

As a matter of general chemical knowledge, paraffin (singular) is a solid consisting of a mixture of hydrocarbons, and is a constituent of petroleum.[21] However, the plural "paraffins" is a group name for the saturated aliphatic hydrocarbons of the methane series, of a general formula C_nH_{2n+2}. That series begins with the gaseous methane and goes in series up to the solid hexacontane of considerable molecular weight (circa 843). So that a paraffin hydrocarbon may be a gas, a liquid of any one of several different densities, or a solid of several different specific gravities. There are several oils in this series. "Mineral oil" (singular) is defined chemically as paraffin oil, or its homologues. Mineral oils (plural) are said to include any oil obtained from inorganic matter, and thus include petroleum. Petroleum is a native mixture of a solution of hydrocarbons and may be one of a number of oils; it may have a paraffin base or a naphthene (asphalt) base. Kerosene is a mixture of hydrocarbons and is a fractional distillate of petroleum. So that, merely from the standpoint of general chemical information, it appears that a hydrocarbon wax from a petroleum origin could be a paraffin hydrocarbon, and a fluid fraction of petroleum might be a paraffin hydrocarbon, and a mineral oil might be both a paraffin hydrocarbon and a fluid fraction of petroleum; and kerosene would appear to be both. In other words, the descriptions of the several additives in the otherwise identical claims in the case appear to overlap. The difficulties presented by the foregoing scientific data are discussed in the briefs, and the pertinence of their accurate determination to the issues in the case is apparently accepted.

[5] This court cannot decide questions of scientific fact, such as the foregoing, upon the basis of its own knowledge or upon standard generalized authorities, in the absence of findings of fact by the

[21] The generalities stated in this paragraph can be found in any authoritative work on chemistry. E. g., Hackh's Chemical Dictionary (3d ed. 1944); Bennett's Concise Chemical and Technical Dictionary (1947); Condensed Chemical Dictionary (Gregory's 3d ed. 1942). See also Webster's New International Dictionary (1945); Funk & Wagnall's New "Standard" Dictionary (1946).

district court or the Patent Office, based upon evidence in the record. It is true that in the Radtke case, supra, we made extensive references to standard authorities not in the record, but in that case there were in the record full evidence, findings and conclusions upon the point at issue.

Absent findings of the underlying facts, we look for a definitive conclusion by the Patent Office as to patentability which might constitute the basis for the district court's adoptive finding. We do not find any such conclusion stated in respect to the patentability of the different claims to different people, except the one to which we have referred respecting Counts 1 and 2 in Interference No. 78,460, and that one, as we have indicated, is unsatisfactory in the absence of more specific underlying findings.

In respect to the patentability of the present claims over the disclosures of the Lincoln application, the record is in confusion as to the conclusions of the Patent Office. Consideration of that patent is found in two of the interference proceedings. For the purpose of declaring Interference No. 75,209, a Primary Examiner found a certain claim (subsequently Count 1 thereof) to be allowable and suggested it to Cohen. During the motion period in this interference, Morell moved to add five new claims or counts (only four of which are important to our present consideration, being before us as Counts 2 and 5 of Interference No. 75,209 and Counts 1 and 2 of Interference No. 78,460). He suggested their unpatentability over the Lincoln patent and demanded that Cohen be required to swear back of [22] that patent as he, Morell, had done during the ex parte proceedings on his application. Concerning Counts 2 and 5 (each drawn to a "metal cutting composition"), the Primary Examiner agreed with Morell's contentions, admitting the counts to the interference upon Cohen's swearing back of the Lincoln patent. This was a clear holding that these two counts were unpatentable over the disclosure of the cited prior art reference. His refusal to admit the remaining two counts (each drawn to a "composition of matter" but otherwise respectively identical to the admitted counts) was premised on his finding that, as read in the light of Morell's disclosures, they were not patentably distinct from the "metal cutting composition" counts. The Board of Appeals reversed this holding and directed that these two counts be admitted subject to the same conditions in respect to Rule 75. This latter restriction, it seems to us, can only be interpreted as a holding that these two counts (subsequently made the subject of a separate and different interference proceeding, No. 78,460), also were unpatentable over the Lincoln patent's disclosures.

At only one other place in the reported proceedings of the four interferences do we find the Lincoln patent mentioned as a prior art reference. Interference No. 69,703 had been declared originally upon one claim found allowable by a Primary Examiner and suggested for purposes of an interference to Cohen and Gallsworthy. During the subsequent motion period, two counts, among others, were suggested by one of the parties as proper additions to the proceeding. The Primary Examiner found these two counts clearly unpatentable for reasons of record in the file of one of the other parties to the interference, and he rejected them without specifically mentioning the Lincoln patent. In the same general opinion, however, he cited that patent as the basis upon which other proposed counts should be rejected. The Board of Appeals reversed the Primary Examiner in respect to the two counts, saying that they "are not anticipated by the cited art and are so similar to the original count that we do not feel justified in questioning the patentability of their subject matter." No "cited art" was named in the Board's opinion as being directed to these two counts. We are unwilling to infer that the Lincoln patent, cited in the opinion of the Primary Examiner but not expressly employed by him in considering these two counts, was within the ambit of this "cited art." These two counts subsequently, and pursuant to the Board's decision, became Counts 2 and 3 of Interference No. 69,703.

The sum total of the foregoing is that we have a clear holding at one stage of the proceedings in the Patent Office that four of the eleven claims are unpatentable over the Lincoln patent, but we find no holding one way or the other in this respect as to the other seven claims; and we find no stated conclusion as to the patentability of any one of these claims over the others, to different inventors, except the one unsatisfactory statement in Interference No. 78,460. The questions as to the chemical relationship between the various ingredients in the several claims, to which we have alluded, make wholly doubtful what the ultimate conclusion of the Patent Office was, or might have been, as to patentability over that prior art reference, or as to patentability to different persons.

In this state of affairs we are asked to infer from the general rules [23] of Patent Office procedure that that Office held these claims patentable in the manner and to the persons to whom they were awarded.

[6] Patent Office Rule 95 provides that "Before the declaration of interference it must be determined that there is common patentable subject matter in the cases of the respective parties. The issue must be clearly defined and be patentable to the respective parties, subject to the determination of the question of priority." The rule is applicable to counts in an original declaration of an interference under Rules 94 and 109 and to the counts in a redeclared interference under Rule 109. Decisions required by Rule 95 as to patentability and as to the ability of each party to make the counts are within the duties of the Primary Examiners, subject to review by the Board of Appeals. As to each of the eleven counts involved in these four interferences,

[22] This expression is a reference to an affidavit under Rule 75 of the Patent Office, in which an applicant for a patent swears that he conceived of a given invention, reduced it to practice, and was diligent in its development prior to the date upon which another applicant filed his application.

[23] Rules of Practice in the United States Patent Office, Appendix to Tit. 35, U. S. C. A., p. 705.

it was affirmatively recited, in general terms, by the Primary Examiner or by the Board that both requisites were fulfilled. We are asked to accept these rulings as controlling upon the question of patentability now before us. This we cannot do.

[7] If these proceedings had involved only one interference, in which all the claims were stated and to which all the parties here were parties, some inferences, in respect to patentability and patentable distinctions, from the circumstances and rules might be proper. We do not pass upon that question, because we do not have that situation before us. The situation here is that there were four interferences, in which the claims stated were different and the parties were different, and different claims were awarded to different people. In that situation we will make no inferences where the findings as stated do not expressly refer to the disputed question. In other words, we will not infer from the bare announcement that a given claim is "allowable," that the Examiner or the Board meant to find that the claim was patentably distinct from another claim not involved in that proceeding. And we will not infer that he, or it, meant to find patentability over a disputed prior art reference which he did not mention. For example, in Interference No. 69,703 a motion to dissolve was made upon the basis of two German patents and a patent to one McQuaid as alleged prior art references. The Board of Appeals considered the named patents and concluded its discussion with the sentence, "The claim is patentable." We will not infer from that statement that the Board meant to find patentability over the Lincoln patent or over the counts in the other interferences, neither of which subjects was mentioned. We cannot tell from that finding what the Patent Office would have held upon the now disputed issues of patentability.

[8] Moreover, other statements and findings by the Primary Examiner and by the Board of Appeals, to some of which we have referred, cast serious doubts upon the patentability of at least some, if not all, of the claims made. We have already discussed the doubts which arise from the discussions of, and rulings upon, the Lincoln patent. Other instances appear involving the patentability of the several counts over each other. The Board of Appeals at one point found that Morell, having claimed a "metal cutting composition," could claim a "composition of matter" of the same ingredients. That is said to be a finding that the two counts are patentably distinct. To us it indicates the contrary, in so far as patentability refers to the right of different persons to take patents on the same compound are concerned. It may very well be that the two counts are so distinct as that the holder of a patent on the generic "composition of matter" is entitled to state separately in the same patent a claim to specified uses of the same substance; and, in that sense, the two claims may be patentably distinct. But it does not follow that they are so distinct as to authorize the issuance of separate patents to separate persons. No discussion whatever appears in the record as to the patentability of the counts titled "lubricant," "lubricating oil," or "method" over those titled "composition of matter" or "metal cutting composition."

With respect to the counts titled "method," which are Counts 2 and 3 in Interference No. 77,416, we cannot infer a finding of fact that these counts are patentably distinct, as between different patentees, from those counts which describe the composition of the substance. One method is described as a "dissolving" of the additive in the base oil, and the other as reducing the friction between moving metallic surfaces by using the substance. When the substance is a lubricating oil which consists of a base oil with an additive merely mixed in, as is the case here, we do not see how a method of merely "dissolving" one into the other could be patentably distinct from the composition itself, in so far as patentability implies the issuance of a patent to one person for the composition and another patent to another person for the method. The same observation applies to a method count which merely describes the reduction of friction between moving surfaces by a lubricant which is otherwise patented.

In the Radtke case, supra, we said that we would not assume that patentability had been determined, but must find it shown by findings and conclusions contained in the record presented to us.

[9] In view of all the foregoing, the case will be reversed and remanded for further findings of fact by the trial court with respect to the underlying chemical facts which will support conclusions of fact as to the patentability of each of the counts involved in this appeal, in respect to each other such count, both in contemplation of the issuance of one patent upon all counts to one person and in contemplation of the issuance of several patents to different persons upon the several counts; and also the basic chemical facts fhich will support a conclusion as to the patentability of each of the counts over the disclosures of the Lincoln application of July 14, 1932.

[10] This situation presents some interesting questions as to the procedure of the court in ascertaining and finding scientific facts of the sort here involved. These facts differ from the ordinary facts in law-suits, as to which there are only a few witnesses, and those may differ in recollection or observation. Scientific facts such as chemical compositions are absolute and are known to many people; although, of course, such people may necessarily be only those learned in the field. When a court is required to adjudicate rights upon the premise of such facts, it ought not to be restricted to partisan or chance evidence. Of course, in many cases, probably in most cases, the witnesses presented by the parties are of a calibre to be satisfactory in the presentation of scientific data. But if they are not, the court should exercise the full extent of its control over the proceedings to insure its own accurate understanding of the requisite facts. No individual judge can know, of his own uninstructed knowledge, all the scientific facts in every field. But he is not required to rest his conclusions, either one way or

the other in a controversy, upon less than complete and correct information upon such facts. He is entitled to rely heavily upon the formal findings of experts, if he has such findings before him. But even then, if those findings are challenged, they must be such as to be understood before the court can rest its conclusion upon them. In the cases at bar, the court can suggest to the private parties the necessity for disinterested, qualified evidence upon such points as it feels the need of evidence in addition to that initially presented. The Commissioner of Patents is also a party, and the experts in his office are available. As a last resort, the trial court has the power of subpoena sua sponte. Of course, an agreed statement, to which the Commissioner was a party, of the underlying scientific facts would be the most satisfactory disposition of the problem.

The foregoing observations are not to be understood to relate to the rules governing burden of proof. We are not considering a situation where the judge acts upon a failure of proof, but one in which he undertakes to make findings of the facts.

[11] It would obviously be helpful if the trial court, in this somewhat novel procedural situation, where four separate proceedings in the Patent Office became combined in one proceeding in the court, and where inferences which might be drawn from a single proceeding in that Office are impossible, could remand the cases to the Patent Office for further findings of fact. But we have been unable to find authority for such a remand in a proceeding under section 4915. The action is de novo and not an appeal. The record of the proceedings in the Patent Office is admitted as though evidence in the pending case and not as a record being reviewed upon appeal. Whether a record of supplemental action in the Patent Office, occurring after this remanding order but prior to further proceedings in the district court, would be admissible in that court upon motion of a party, is not now before us.

We come now to the questions of priority among the parties, which should be resolved, since further consideration by the district court has been directed, and these questions may continue to be important. Two such questions are presented. The first is whether Morell reduced his conception to practice prior to the Gallsworthy application. The second is the same question as to Cohen.

[12] The Patent Office held, in Interference No. 78,460, that Morell effectively reduced the invention to practice by his automobile road tests in August 1932, in conjunction with his series of laboratory tests. The district court took the view that since corrosion is an important consideration in the practicability of a lubricant, it was necessary that the engine in which the road tests had been made, be taken down and its inner surfaces examined for corrosion, before the test could be said to be a reduction to practice. Laboratory tests for corrosion had been made by Morell, and the compound found satisfactory in that respect. The Board of Appeals considered at some length the nature of the tests necessary to establish a reduction to practice of a lubricant. It held that both laboratory tests and actual service tests are necessary, since each type of test establishes different desirable properties of the oil composition. It held that the laboratory tests plus the road tests by Morell together constituted a satisfactory test as to the required qualities. The district court, in effect, held that they were not. On the present record, we agree with the Patent Office on this point. We understand that if a substance be corrosive of metals, the fact will appear in proper laboratory tests. We note that the Federal specification for lubricants[24] directs laboratory tests upon the matter of corrosion. However, since the cases are remanded for further findings, we will not foreclose the district court upon this point of fact, i. e., whether a laboratory test of the sort made by Morell, combined with an observation of the oil after road tests, is a satisfactory demonstration, scientifically speaking, of the corrosive quality of the compound. Findings upon this question of fact should be made.

[13] In respect to Cohen's claim to a reduction to practice, we agree with the Patent Office and the district court. Cohen argued there, and argues here, that "A composition of matter is reduced to practice when it is completely composed. He cites *Corona Co.* v. *Dovan Corp.*[25] and *Kyrides* v. *Bruson.*[26] He, therefore, contends that when he mixed a lubricating oil and a chlorinated paraffin wax, and found them miscible, he reduced to practice the composition of matter, and that no tests were necessary. The Board of Interference Examiners distinguished the cases cited, because in them, it said, the problem was one of producing the compound, the properties of the compound being known in case its production was accomplished. In the present case, said the Board, the problem was not in production, since that was merely a matter of mixing the two ingredients. No special properties of the mixture were known, although obviously any mixture consisting principally of lubricating oil would be expected to have some lubricating properties. For these reasons, the Board held that it was necessary that it be demonstrated that the mixture possessed extreme pressure lubricating properties not possessed by the oil alone, and that tests were thus necessary. We agree. The problem involved in the invention was the suitability of the product for usefulness, and not its mere production. So that the mere mixing of the two ingredients, without more, could not be deemed a demonstration equivalent to a reduction to practice.

[14] There remains the question of the admissibility of certain evidence proffered by Morell in the court below, and denied admission by that court. The rule is well settled that new and additional evidence may be received in a civil action under section 4915,[27] but it is equally well settled that a party may not successfully offer to the court evidence withheld from the Patent Office.[28] The answer to the present question depends upon whether the latter limitation applies. The testimony proffered was that of an expert in chemistry and concerned three questions. The first was whether propane is a fluid fraction of petroleum. The Board of Appeals had held that it is not. Morell evidently considered that ruling to be based upon the proposition that the gaseous propane is not "fluid," and moved for reconsideration. The Board of Appeals explained in its ruling upon the motion that the basis of its ruling was that propane is not a "fraction" of petroleum. The second question, to the same witness, concerned the chemical nature of the chlorinated mineral oil disclosed in the Gallsworthy application, and the third question concerned the nature and value of laboratory tests of a lubricant. The admissibility of evidence of this sort in a case such as this should be determined by the necessities of the case. The court is sitting without a jury; the facts involved are scientific in nature; the court is called upon to adjudicate rights upon the basis of those facts. It follows that if the evidence would assist the court, and if no bad faith on the part of the profferer is involved, such as deliberate withholding for some tactical reason, the court could receive the evidence[29]; in fact, as we have already pointed out, the situation might be such as to require the court to seek such evidence. In this situation the court should not consider itself bound by a rule excluding evidence not offered to the Patent Office. The district court is directed that in its further consideration of these cases, it may receive this evidence, if the evidence otherwise in the record concerning these scientific facts is not sufficient or satisfactory as a basis for findings of such facts.

REVERSED AND REMANDED for further proceedings in accordance with this opinion.

NOTICES

Cancellation Notice

Belle Knitting Corp., its assigns or legal representatives, take notice:

A cancellation proceeding has been instituted by this Office upon the application of Fabric Specialties Co., Inc., 650 Turner Ave., N. W., Grand Rapids, Mich., to effect the cancellation of trade-mark registration of Belle Knitting Corp., No. 355,157, dated March 8, 1938. The assignment records of this Office show a transfer of title to this registration to The McKay Products Corporation, Baltimore, Md., which has been substituted for said registrant to defend the registration concerned. The Office having been unable to secure service upon The McKay Products Corporation, notice is hereby given that unless its assigns, legal representatives, or other person claiming an interest in the registration shall enter an appearance therein within thirty days from the first publication of this order the cancellation will be proceeded with as in the case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

THOMAS F. MURPHY,
Assistant Commissioner of Patents.

February 4, 1948.

Adjudicated Patents

(C. C. A. Mo.) Kesling patent, No. 2,034,400, for a gear shifting machine, claims 25 to 29 *Held* valid and infringed. *General Motors Corp.* v. *Kesling*, 164 F.2d 824; 76 USPQ 30.

(C. C. A. Ill.) Wallace and Hand patent, No. 2,236,387, for a perspiration inhibiting composition, claims 1 to 6, 8 to 13, 15, and 16 *Held* valid and infringed. *Wallace* v. *Mandell Bros.*, 164 F.2d 861; — USPQ —.

Erratum

In the OFFICIAL GAZETTE of February 3, 1948, page 59, Trade-Mark Registrations Republished, registration No. 305,484, for "Claims use since about Apr. 23, 1936" read *Claims use since about Apr. 23, 1931.*

REGISTER OF PATENTS AVAILABLE FOR LICENSING OR SALE

(The "Groups" appearing after the patent abstracts are based on the Standard Industrial Classification Manual, Vol. I. Manufacturing Industries, Executive Office of the President. Bureau of the Budget)

The United Shoe Machinery Corporation, of 140 Federal St., Boston 10, Mass., has placed 186 patents on the Register of Patents as available for license in addition to the 2,092 patents previously registered by this corporation. Of these patents, 138 cover shoe machinery, the remaining 48 being useful in various other fields which include sewing machines, parts, and attachments; sorting machines; and devices such as finishing tools and brush structures. Abstracts of these 186 patents will be published in groups in the OFFICIAL GAZETTE from March 2 to March 16 inclusive.

SHOE MACHINERY (Group 35—59)—Con.

Pat. 2,103,667. MACHINE FOR REMOVING LACINGS FROM SHOE UPPERS. Patented Dec. 28, 1937. A series of hooks are arranged to be engaged by the lacings of a shoe pressed against them. A treadle or lever pulls all the hooks into spaces between shearing and holding plates, and a suction tube is arranged to remove the lacings when the hooks are returned to normal position. Reg. No. 9,248.

Pat. 2,104,113. SHOE SOLE FITTING MACHINE. Patented Jan. 4, 1938. Relates to a machine for reducing and roughing the margin of a shoe sole. The sole is mechanically fed past the concave side and in the path of movement of the cutting teeth of a concavo-convex circular saw like cutting and roughing tool by a feed disk having a sharp, spiral work engaging and feeding lip upon its face. Reg. No. 9,249.

Pat. 2,104,118. APPARATUS FOR ATTACHING SHOE SOLES. Patented Jan. 4, 1938. A welt holddown for cement sole attaching machines. A three-piece holddown, readily adjustable to fit the toe portions of shoes of different widths and shapes while maintaining a substantially continuous shoe engaging surface has a transverse toe piece and transversely adjustable side members the front ends of which abut the shoe engaging face of the toe piece. Reg. No. 9,250.

Pat. 2,104,138. TRIMMING MACHINE. Patented Jan. 4, 1938. Relates to a power operated cutting device operable to cut V notches in the upstanding lasting margin of the toe portion of a shoe positioned in a bed lasting machine. The device is suspended by a jointed shaft so that it may be applied to the shoe by hand. Reg. No. 9,251.

Pat. 2,104,183. MACHINE FOR OPERATING UPON SHOE HEELS. Patented Jan. 4, 1938. An automatic machine for burnishing heels. A plurality of heels are held and rotated individually by holders arranged on a rotating turret in a circle surrounding a single, central, rotating tool which performs a burnishing operation upon a plurality of the heels simultaneously. Reg. No. 9,252.

Pat. 2,106,171. FLEXING MACHINE. Patented Jan. 25, 1938. A machine having automatic mechanism for feeding shoe soles, one by one, from the bottom of a stack to gripping jaws carried by an endless conveyor. The jaws operate automatically to draw the soles between two flexing mechanisms each comprising two sets of flexing rolls. Reg. No. 9,253.

Pat. 2,111,608. STAPLING MACHINE. Patented Mar. 22, 1938. A staple forming and driving mechanism having means for cutting wire at opposite equal angles to bring the points of the legs of the staple on the same side of the staple. Reg. No. 9,254.

Pat. 2,173,176. TRIMMING MACHINE. Patented Sept. 19, 1939. A machine for preparing the toe of a pulled-over shoe for toe lasting with cement. A rotary cutter cuts off the margins of the lining, the box toe and the doubler while two cement applying nozzles spread bands of lasting cement on the margins of the upper and the insole, respectively. Reg. No. 9,255.

Pat. 2,175,200. TRIMMING MACHINE. Patented Oct. 10, 1939. A machine for trimming off the lasting allowance of the lining, toe-box and doubler at the toe end of a pulled-over shoe. A fixed blade guides the margin of the insole and a cooperating vibrating cutting blade operating between the margin of the shoe upper and the materials to be severed shears off the said materials, a resilient finger moving with the cutting blade serving to smooth out irregularities in the materials to be cut. Reg. No. 9,256.

Pat. 2,288,721. FASTENING-INSERTING MACHINE. Patented July 7, 1942. An inside nailing heel attaching machine in which the nail drivers are carried in groups by independently slidable plates in a jack movable to and from a position in which the plates register with corresponding plates which are advanced in succession by a set of power driven cranks, to cause the nails to be driven in successive groups. Reg. No. 9,257.

Pat. 2,289,415. MACHINE FOR ASSEMBLING SHOE PARTS. Patented July 14, 1942. A method and machine for forming the toe end of the upper of a moccasin type shoe inward over a form by means of a wiper, and a pressure-applying member which presses the sole member of the shoe down against the in-wiped upper. Reg. No. 9,258.

Pat. 2,290,312. INSOLE MARGIN CEMENTING MACHINE. Patented July 21, 1942. A machine for applying cement to the edge and both faces of the margin of an insole. The cement is applied by three rolls the axes of all of which lie in the same plane. Reg. No. 9,259.

Pat. 2,290,356. MACHINE FOR TREATING SOLES WITH HEAT. Patented July 21, 1942. A plurality of heating units which are individually adjustable in parallel directions form a heating surface which may be arranged to correspond in shape to the contour of the sole to be treated. A conveyor carries the sole past the heating device in a direction widthwise of the sole. Reg. No. 9,260.

Pat. 2,290,848. SHOE MACHINE. Patented July 21, 1942. Relates to manually controlled means for causing a toe lasting machine to perform automatically two cycles of operations instead of one, to subject a heavy upper to a greater number of wipes before the tacks are driven. Reg. No. 9,261.

Pat. 2,290,941. SHOE MACHINE. Patented July 28, 1942. A machine for use in cement lasting stitchdown shoes. A continuously operated drive member is so connected by a system of links to one of a pair of gripper jaws that adjustment of the relative positions of the links by operation of a treadle effects a continuous variation from zero to a maximum value in the motion imparted to the jaw. Reg. No. 9,262.

Pat. 2,291,688. ROUGHING MACHINE. Patented Aug. 4, 1942. A duplex roughing machine having a pair of driven roughing belts continuously vibrated transversely of their running direction. Each belt is supported by a backing roll at working position against deflection by the work pressed against it. Reg. No. 9,263.

Pat. 2,291,757. SKIVING MACHINE. Patented Aug. 4, 1942. Relates to a skiving machine of the tubular knife type in which the feed roll is mounted in a pivoted frame which can be swung from closed to open position to afford access to the knife. Provision is made for preventing application of power to rotate the knife when the pivoted frame is in open position. Reg. No. 9,264.

Pat. 2,292,508. TRIMMING MACHINE. Patented Aug. 11, 1942. Relates to an inseam trimmer having a rotary cutter head carrying a pair of cutters in shearing relation to a feed wheel and rotatable about their own axes at a speed slower than that of the cutter head to present a new cutting surface to the work in each rotation of the head, thereby prolonging the life of the cutters. Reg. No. 9,265.

Pat. 2,292,936. POUNDING MACHINE. Patented Aug. 11, 1942. A shoe bottom pounding machine having a pounding roll in which are outwardly curved rods carrying loose rings so arranged that during the beating operation they present curved work-engaging surfaces which can be brought to bear with uniform pressure upon the curved portions of the work. Reg. No. 9,266.

Pat. 2,293,080. SHOE MACHINE. Patented Aug. 18, 1942. A trimming machine having a shoe upper engaging template with a thin, flexible portion to fit various curvatures and a thick, rigid portion to bridge the shank of the shoe and guide an operation around the margin of the shoe, partly by contact with the template and partly by the upper, the thin portion being arranged to transfer the guiding action from the template to the upper, and vice versa. Reg. No. 9,267.

Pat. 2,293,243. MACHINE FOR ASSEMBLING INSOLES AND BACK PARTS OF SHOES. Patented Aug. 18, 1942. Relates to a device comprising an insole supporting plate and gages for positioning an insole on the plate and a shoe back part with the forward ends of its flange on the insole and the rear portion of the flange spaced from the insole while the forward ends are tacked or stapled to the insole. Reg. No. 9,268.

Pat. 2,293,244. MACHINE FOR FASTENING UPPERS TO INSOLES. Patented Aug. 18, 1942. A modified heel seat lasting machine in which the wipers are held stationary in closed position and serve as means for pressing the flange of a molded heel part of a shoe upper down on an insole on a metal form or last while tacks are driven to secure the upper and insole together. Reg. No. 9,269.

Pat. 2,293,252. FINISHING EDGES OF SHEET MATERIAL. Patented Aug. 18, 1942. Relates to a machine in which a finishing bead of plastic material is applied to the raw edge of a sheet of leather by feeding the edge portion of the sheet through an opening in the side of an extrusion nozzle. The opening is formed at its ingoing side to fit the work and is larger at its outgoing side, to form a bead of extruded material on the edge of the work. Reg. No. 9,270.

Pat. 2,293,738. SHOE LASTING AND SEWING MACHINE. Patented Aug. 25, 1942. A stitchdown thread lasting machine is provided with a welt guide to permit sewing a grooved welt to a shoe upper and a portion of the insole while the upper is being lasted. The welt guide is moved away from the upper during the feed of the work and toward the upper during the stitch forming operation. Reg. No. 9,271.

Pat. 2,293,794. ADHESIVE APPLYING ROLL. Patented Aug. 25, 1942. Relates to a method of and means for mounting a cover on an adhesive applying roll. The cover is first slipped over the roll and permanently secured at one end. Then it is tensioned and held under tension by springs hooked into the other end while the second end is permanently secured to the roll. Reg. No. 9,272.

Pat. 2,293,834. FASTENING-INSERTING MACHINE. Patented Aug. 25, 1942. Relates to a heel attaching machine in which a shoe support is moved by power, from a position in co-operative relation with mechanism which drills a hole through the heel seat of the shoe into the heel, to a position in which a screw driving mechanism drives a heel attaching screw into the drilled hole and then back to the starting position. Reg. No. 9,273.

Pat. 2,293,863. MACHINE FOR AND METHOD OF OPERATING UPON THE HEEL PORTIONS OF SHOES. Patented Aug. 25, 1942. A heel attaching machine having a shoe and heel support and a feeler cooperating with the support to control the extent of movement of a reciprocatory fastening driver by which a heel attaching fastening is driven. Reg. No. 9,274.

Pat. 2,294,443. MACHINE FOR OPERATING UPON SOLES. Patented Sept. 1, 1942. Relates to an insole lip-setting machine having a lower fixed plow against which a sole is pressed by a supporting roll and an upper spring-pressed plow which engages the sole at the other side of the lips and follows the sole surface regardless of variations in sole thickness. Reg. No. 9,275.

Pat. 2,294,472. SOLE MARGIN CEMENTER. Patented Sept. 1, 1942. A machine having a pair of cement nozzles pivotally mounted on swinging arms capable of tilting heightwise of the work. Sole edge guides on the nozzles follow the contour of opposite edges of a sole fed in a straight line between the nozzles, and the margins along both sides of the sole are coated simultaneously with cement. Reg. No. 9,276.

Pat. 2,294,481. METHOD AND APPARATUS FOR USE IN SHOEMAKING EMPLOYING HEAT. Patented Sept. 1, 1942. Relates to a shoe rack for metallic lasts. Sockets in the cones of the lasts are placed on jack pins containing electric resistance heating units by means of which the lasts are kept hot while shoes upon them are being transferred from one operation to another. Reg. No. 9,277.

Pat. 2,295,622. ABRADING MACHINE. Patented Sept. 15, 1942. A buffing machine the feature of which is a replaceable work engaging member of wire in a resiliently yieldable finger which presses the work against a buffing tool. The wire protects the finger from damage by contact with the buffing tool and may easily be replaced if damaged by such contact. Reg. No. 9,278.

Pat. 2,295,662. FASTENER FORMING AND INSERTING MACHINE. Patented Sept. 15, 1942. A machine for shearing from wire a double clench fastener having at each end an inclined face which determines the direction of the clench, driving and clenching it. The severed fastener is driven from a passageway in a throat in which all fasteners are similarly oriented so they will all clench in the same direction. Reg. No. 9,279.

Pat. 2,295,677. MACHINE FOR OPERATING ON SHOE UPPERS. Patented Sept. 15, 1942. A flange forming and trimming machine in which a flange at the back part of a shoe upper is wiped in and trimmed to a predetermined contour, and the upper is molded substantially to final shape. Reg. No. 9,280.

Pat. 2,295,682. MACHINE FOR PREPARING WELTING. Patented Sept. 15, 1942. Relates to a cement extruding machine provided with a special nozzle and guide to adapt it for coating a beveled margin of a strip of welting. The machine drive is interconnected with a drive for a reel specially constructed to receive and hold the coated strip while the cement dries. Reg. No. 9,281.

Pat. 2,295,690. MACHINE FOR TREATING COUNTERS. Patented Sept. 15, 1942. A machine including a pair of dies arranged to form longitudinal corrugations in the forward ends of the inturned flange of a molded counter to make the ends of the flange sufficiently pliable to be easily lasted. Reg. No. 9,282.

Pat. 2,295,695. ABRADING MACHINE. Patented Sept. 15, 1942. A buffing machine in which the work is pressed against a buffing roll by a series of pneumatically actuated fingers arranged in rows, the fingers in one row being staggered with relation to those of the other row. An intermittently operated air jet blows the dust from the buffing roll. Reg. No. 9,283.

Pat. 2,295,700. DEVICE FOR USE IN APPLYING PRESSURE TO SHOE BOTTOMS. Patented Sept. 15, 1942. A device for use in a cement sole attaching machine when using pressure responsive cement. A very thin, polished plate is secured to a toe gage by which a cemented shoe is positioned relatively to a cemented sole, to prevent the shoe from touching the sole before the shoe is properly positioned. The gage and plate are withdrawn before attaching pressure is applied. Reg. No. 9,284.

Pat. 2,296,283. MACHINE FOR SHAPING UPPERS OVER LASTS. Patented Sept. 22, 1942. A fluid pressure operated gripper mechanism in a pulling-over machine for subjecting a shoe upper to a series of rapidly repeated pulling impulses in the pause in the cycle which occurs after the initial pull on the upper. Reg. No. 9,285.

Pat. 2,298,337. PRESS. Patented Oct. 13, 1942. Relates to a clicking press having a vertically adjustable cutting block and hydraulic mechanism for elevating the block to, and holding it in, operative position. This serves to permit release of the presser arm if stalled on the block, or adjustment of a stop against which the block is positioned when the block is raised by the hydraulic mechanism. Reg. No. 9,286.

Pat. 2,298,384. MACHINE FOR USE IN MAKING PREWELT SHOES. Patented Oct. 13, 1942. A machine for preparing a prewelt upper for assembly with an insole, filler and outsole assembly, comprising driven mating rolls for premolding the toe end of the upper and bending the welt into sole attaching position. Reg. No. 9,287.

Pat. 2,298,389. ASSEMBLING MACHINE. Patented Oct. 13, 1942. A machine for assembling on a last heel portions of stitchdown upper parts, comprising a last depressor and wipers which may be retracted to enable the operator to pull up the quarter linings with hand pincers. Reg. No. 9,288.

Pat. 2,298,390. LASTING MACHINE. Patented Oct. 13, 1942. A machine for lasting prewelt shoes comprising lasting rolls operating in the welt crease, rolls for pressing the welted margin to cement it to an insole, and means for feeding the shoe through the rolls. Reg. No. 9,289.

Pat. 2,298,430. TRIMMING MACHINE. Patented Oct. 13, 1942. Relates to a machine for trimming crepe soles, the chief feature of novelty being in a feed roll designed to prevent distortion of the sole during the trimming operation, which is performed by a reciprocatory knife. Reg. No. 9,290.

Pat. 2,299,159. FINISHING TOOL. Patented Oct. 20, 1942. Relates to an edge setting tool comprising two interlocking sections which are automatically adjusted toward or from each other during the edge setting operation so as to keep the width of the tool correlated with the thickness of the sole at the point of operation. Reg. No. 9,291.

Pat. 2,299,176. ROUGHING MACHINE. Patented Oct. 20, 1942. A shoe upper roughing machine employing two closely adjacent rotary wire brushes relatively adjustable heightwise by treadle action to operate upon a narrow or wide band, as the case may be, on the shank and forepart portions, respectively, of a shoe bottom. Reg. No. 9,292.

Pat. 2,299,788. LIP TURNING MACHINE. Patented Oct. 27, 1942. An insole lip turning machine having separate lip raising, lip turning, and lip setting means, operating in sequence, with means for backing up the lip while it is being operated upon by pounding means, to prevent bulging or distortion of the lip material and insure straightness of the shoulder formed. Reg. No. 9,293.

Pat. 2,299,818. MACHINE FOR CUTTING SHEET MATERIAL. Patented Oct. 27, 1942. Relates to a die assembly adapted for use in cutting pieced heel lifts in a clicking machine. A plurality of heel lift dies of different sizes are arranged below a yieldable table upon which the material to be cut is positioned and are so secured that they can be readily adjusted or removed. Reg. No. 9,294.

Pat. 2,300,462. FOLDING MACHINE. Patented Nov. 3, 1942. Relates to a folding machine in which a rotatable hammer consisting of a roll having spiral grooves in its work engaging surface is rotated about an axis substantially normal to the direction of feed of the work. This roll assists in the feeding operation and exerts an inward force on the upturned margin of the work as the margin is folded back upon the body of the work. Reg. No. 9,295.

TRADE-MARKS

OFFICIAL GAZETTE, MARCH 9, 1948

[VOL. 608, NO. 2]

ACT OF 1905

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication. As provided by section 14 of said act, a fee of ten dollars must accompany each notice of opposition.

Marks published for opposition under the act of 1946 follow the 1905 publications.

CLASS 1

RAW OR PARTLY PREPARED MATERIALS

Ser. No. 499,585. VELSICOL CORPORATION, Chicago, Ill. Filed Apr. 3, 1946.

VELSICOL

FOR RESINS ESSENTIALLY OF PETROLEUM ORIGIN, HAVING A GENERAL USE IN THE INDUSTRIAL ARTS.

Claims use since December 1936.

Ser. No. 499,589. VELSICOL CORPORATION, Chicago, Ill. Filed Apr. 3, 1946.

FOR RESINS, ESSENTIALLY OF PETROLEUM ORIGIN, HAVING A GENERAL USE IN THE INDUSTRIAL ARTS.

Claims use since December 1936.

Ser. No. 508,836. COLUMBIAN ROPE COMPANY, Auburn, N. Y. Filed Sept. 11, 1946.

Co-Ro-Mil

FOR MOLDING MATERIAL COMPOSED OF DESICCATED VEGETABLE FIBER AND RESIN.

Claims use since Jan. 1, 1944.

Ser. No. 521,338. LAMINATED PLASTICS, INC., East Cleveland, Ohio. Filed Apr. 25, 1947.

MOLAM

FOR PARTLY PREPARED MATERIALS FORMED BY SUBJECTING REINFORCING MATERIAL (CONSISTING OF GLASS FIBER, CLOTH OR PAPER) AND THERMOPLASTIC RESINOUS BONDING AGENTS TO HEAT AND PRESSURE WHICH ARE SOLD TO THE TRADE IN THE FORM OF THIN, FLAT SHEETS OR MOLDED ARTICLES OF VARYING SIZES AND SHAPES.

Claims use since Feb. 27, 1946.

Ser. No. 522,184. HARBUTT'S PLASTICINE LIMITED, Bathamton, near Bath, England. Filed May 10, 1947.

PLASTICINE

FOR MODELING PASTE.

Claims use since Feb. 14, 1899.

Ser. No. 522,831. EAGLE-OTTAWA LEATHER COMPANY, Grand Haven, Mich. Filed May 22, 1947.

TUFTOE

FOR LEATHER.

Claims use since June 1938.

CLASS 2

RECEPTACLES

Ser. No. 516,546. INSOLL MANUFACTURING COMPANY, Chicago, Ill. Filed Jan. 29, 1947.

BILL-MASTER

Registration rights for the word "Bill," except in the association shown, are disclaimed.

FOR DEVICE FOR HANDLING AND STORAGE OF PAPER MONEY.

Claims use since Jan. 15, 1947.

CLASS 3

BAGGAGE, ANIMAL EQUIPMENTS, PORTFOLIOS, AND POCKETBOOKS

Ser. No. 517,989. GARAY & CO., INC., New York, N. Y. Filed Feb. 24, 1947.

Garastraw

FOR HANDBAGS.

Claims use since Dec. 4, 1945.

CLASS 6

CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS

Ser. No. 482,193. JOHN BIRD COMPANY, doing business as The Atlantic Spice Company, Rockland, Maine. Filed Apr. 16, 1945.

THREE CROW

FOR CREAM OF TARTAR, SALERATUS, BAKING SODA, PETROLATUM, EPSOM SALTS, CAMPHOR, FRIARS' BALSAM, AND SULPHUR.

Claims use on cream of tartar, saleratus, soda, petrolatum, epsom salts, camphor, friars' balsam, since Apr. 1, 1890; and on sulphur since Apr. 1, 1919.

Ser. No. 495,395. MAYFLOWER MANUFACTURING COMPANY, Mineral Wells, Tex. Filed Jan. 25, 1946.

Pal Pinto

FOR RUBBING ALCOHOL AND REMEDIES FOR INTERNAL AND EXTERNAL USE, FOR ALLEVIATION OF SUCH AILMENTS AND DISORDERS AS ACHES AND PAINS, HEADACHE, STOMACH ACHE, CONSTIPATION, KIDNEY AND BLADDER DISORDERS, AND GENERAL DEBILITY.

Claims use since November 1945.

Ser. No. 501,963. HELEN ENGLISH, INC., Rochester, N. Y. Filed May 13, 1946.

FIRST LOVE

FOR COSMETICS—NAMELY, PERFUME, COLOGNE, FACE POWDER, LIPSTICK, AND COMBINATION COSMETIC KITS CONTAINING FACE POWDER, LIPSTICK, AND COLOGNE.

Claims use since Sept. 13, 1943.

Ser. No. 503,196. MAX FACTOR & CO., Los Angeles, Calif. Filed June 3, 1946.

TELE-GENIC

FOR POWDER FOUNDATION CREAM, SOLIDIFIED CREAM USED FOR A MAKE-UP BASE, LIP GLOSS, AND FACE POWDER.

Claims use since Apr. 17, 1946.

Ser. No. 505,187. DERMATOLOGICAL PRESCRIPTION LABORATORIES, INC., San Francisco, Calif. Filed July 8, 1946.

"HYDROLATUM"

FOR OINTMENT BASE IN WHICH TO DISPENSE DRUGS AND CHEMICALS USED IN THE TREATMENT OF SKIN DISEASES.

Claims use since Dec. 19, 1944.

Ser. No. 506,094. CLIFTON CHEMICAL CO., INC., New York, N. Y. Filed July 23, 1946.

Foo Lee

FOR LIQUID SHAMPOO.

Claims use since May 1, 1946.

Ser. No. 508,523. ILLINOIS AGRICULTURAL ASSOCIATION, Chicago, Ill. Filed Sept. 5, 1946. Under the act of February 20, 1905, as amended June 10, 1938.

FOR INSECT SPRAY, DRY INSECTICIDES, LIQUID DIP, MANGE OIL, AND WHITE MINERAL OIL FOR MEDICINAL PURPOSES.

Claims use since 1930 on insecticides; and since 1932 on liquid dip, mange oil, and white mineral oil.

Ser. No. 509,734. STADDON & KILBOURN, LIMITED, Montreal, Quebec, Canada. Filed Sept. 25, 1946.

Halcyon Nights

FOR PERFUMES.

Claims use since June 5, 1946.

Ser. No. 509,736. STADDON & KILBOURN, LIMITED, Montreal, Quebec, Canada. Filed Sept. 25, 1946.

Scimitar

FOR PERFUMES.

Claims use since June 7, 1946.

Ser. No. 509,737. STADDON & KILBOURN, LIMITED, Montreal, Quebec, Canada. Filed Sept. 25, 1946.

Vagrant

FOR PERFUMES.

Claims use since May 29, 1946.

Ser. No. 509,933. E. FREDERICS, INC., Long Island City, N. Y. Filed Sept. 28, 1946.

Prell

Applicant claims ownership of registration No. 417,434.
FOR SHAMPOO.
Claims use since Sept. 20, 1944.

Ser. No. 536,736. VIS-KO INC., Sumner, Wash. Filed Oct. 3, 1947.

VIS-KO

FOR INSECTICIDES AND FUNGICIDES.
Claims use since Aug. 4, 1937.

Ser. No. 537,646. AMERICAN CYANAMID COMPANY, New York, N. Y. Filed Oct. 13, 1947.

ARTANE

FOR ANTI-SPASMODIC PREPARATIONS.
Claims use since Sept. 18, 1947.

Ser. No. 538,186. SHARP & DOHME, INCORPORATED, Philadelphia, Pa. Filed Oct. 17, 1947.

TYROSCABE

FOR PREPARATION FOR USE IN TREATING SKIN DISEASES.
Claims use since Oct. 8, 1947.

CLASS 11
INKS AND INKING MATERIALS

Ser. No. 526,957. KEE LOX MANUFACTURING COMPANY, Rochester, N. Y. Filed July 5, 1947. Under section 2f of the act of 1946.

LIN-N-BOND

Applicant disclaims the word "Bond" apart from the mark. Applicant claims ownership of registration No. 243,463.
FOR CARBON PAPER.
Claims use since May 15, 1927.

Ser. No. 526,958. KEE LOX MANUFACTURING COMPANY, Rochester, N. Y. Filed July 5, 1947. Under section 2f of the act of 1946.

Black Beauty

Applicant claims ownership of registration No. 385,736.
FOR CARBON PAPERS AND TYPEWRITER RIBBONS.
Claims use since Nov. 3, 1932.

Ser. No. 526,959. KEE LOX MANUFACTURING COMPANY, Rochester, N. Y. Filed July 5, 1947. Under section 2f of the act of 1946.

THIN-THIN

Applicant claims ownership of registration No. 396,537.
FOR CARBON PAPERS AND TYPEWRITER RIBBONS.
Claims use since Jan. 1, 1905.

Ser. No. 526,960. KEE LOX MANUFACTURING COMPANY, Rochester, N. Y. Filed July 5, 1947. Under section 2f of the act of 1946.

STA GOOD

Applicant claims ownership of registration No. 194,553.
FOR CARBON PAPER.
Claims use since Oct. 22, 1923.

Ser. No. 526,963. KEE LOX MANUFACTURING COMPANY, Rochester, N. Y. Filed July 5, 1947. Under section 2f of the act of 1946.

Dri Kleen

Applicant claims ownership of registration No. 375,815.
FOR CARBON PAPERS AND TYPEWRITER RIBBONS.
Claims use since Nov. 1, 1937.

Ser. No. 526,970. KEE LOX MANUFACTURING COMPANY, Rochester, N. Y. Filed July 5, 1947. Under section 2f of the act of 1946.

AIR-SEALED

Applicant claims ownership of registration No. 154,198.
FOR TYPEWRITER RIBBONS.
Claims use since June 1, 1919.

CLASS 12
CONSTRUCTION MATERIALS

Ser. No. 515,774. MCFEELY BRICK COMPANY, Latrobe, Pa. Filed Oct. 22, 1947.

GRAFSET

FOR MORTAR.
Claims use since Nov. 26, 1945.

Ser. No. 528,126. THE MASSILLON REFRACTORIES COMPANY, Tuscarawas, Ohio. Filed July 8, 1947.

ALUMNITE

Applicant claims ownership of registration No. 262,651.
FOR FIRE BRICK, REFRACTORY SHAPES, CERAMIC LAYING MIXTURES, REFRACTORY CEMENTS, AND SPECIAL REFRACTORY COMPOUNDS OR MIXTURES.
Claims use since Sept. 1, 1898.

Ser. No. 528,211. LEHIGH PORTLAND CEMENT COMPANY, Allentown, Pa. Filed July 9, 1947. Under section 2f of the act of 1946.

LEHIGH

Applicant claims ownership of registration No. 152,609.
FOR PORTLAND CEMENT.
Claims use since Jan. 15, 1915.

Ser. No. 532,397. THE MASTER BUILDERS COMPANY, Cleveland, Ohio. Filed Aug. 9, 1947.

COLORCRON

Applicant claims ownership of registrations Nos. 174,470, 258,695, 258,696, 330,261, and 425,844.

Claims use since Jan. 1, 1929.

Ser. No. 533,943. ST. PAUL & TACOMA LUMBER CO., Tacoma, Wash. Filed Sept. 9, 1947.

TREE LIFE

Applicant claims ownership of registration No. 263,784.

FOR LUMBER AND LUMBER PRODUCTS, CONSISTING OF MANUFACTURED FIR, CEDAR, SPRUCE, PINE, AND HEMLOCK, BOTH ROUGH AND FINISHED; SHINGLES; LAMINATED COMPOSITE BOARDS FORMED OF FIBROUS LAYERS BONDED TOGETHER AND HAVING AN OVERLAY FUSED OR OTHERWISE FIRMLY ATTACHED THERETO; PLYWOOD; AND WALLBOARDS.

Claims use since Jan. 1, 1929.

Ser. No. 533,944. ST. PAUL & TACOMA LUMBER CO., Tacoma, Wash. Filed Sept. 9, 1947.

Applicant claims ownership of registration No. 328,157.

FOR LUMBER AND LUMBER PRODUCTS, CONSISTING OF MANUFACTURED FIR, CEDAR, SPRUCE, PINE, AND HEMLOCK, BOTH ROUGH AND FINISHED; SHINGLES, LAMINATED COMPOSITE BOARDS FORMED OF FIBROUS LAYERS BONDED TOGETHER AND HAVING AN OVERLAY FUSED OR OTHERWISE FIRMLY ATTACHED THERETO; PLYWOOD; AND WALLBOARDS.

Claims use since May 1, 1934.

Ser. No. 533,969. AIR-MASTER WINDOW CO., Hartford, Conn. Filed Sept. 10, 1947.

AIR-MASTER

FOR WINDOWS COMPRISING UNITS INCLUDING THE CASING, SASH, AND SCREEN.

Claims use since Mar. 5, 1947.

Ser. No. 534,066. THE CHAS. TAYLOR'S SONS COMPANY, Cincinnati, Ohio. Filed Sept. 10, 1947.

Tayco

FOR REFRACTORY CEMENTS, REFRACTORY RAMMING MIXES, REFRACTORY BRICKS, AND REFRACTORY BLOCKS.

Claims use since January 1920.

Ser. No. 534,331. PACIFIC CLAY PRODUCTS, Los Angeles, Calif. Filed Sept. 12, 1947.

EXCELSIOR

FOR STRAIGHTS AND STANDARD SIZE SHAPES OF FIRE BRICK AND FIRE CLAY.

Claims use since 1895.

Ser. No. 534,333. PACIFIC CLAY PRODUCTS, Los Angeles, Calif. Filed Sept. 12, 1947.

TROPHY

FOR CLAY WALL TILE AND TRIMMERS.

Claims use since 1940.

CLASS 14

METALS AND METAL CASTINGS AND FORGINGS

Ser. No. 527,707. SUPERIOR ZINC CORPORATION, Philadelphia, Pa. Filed July 5, 1947.

SU PERI OR

Applicant claims ownership of registration No. 264,621.

FOR SLAB-ZINC AND ZINC DUST.

Claims use since Aug. 1, 1926.

Ser. No. 527,708. SUPERIOR ZINC CORPORATION, Philadelphia, Pa. Filed July 5, 1947. Under section 2f of the act of 1946.

SUPERIOR

"All the name implies"

Applicant claims ownership of registration No. 264,621.

FOR SLAB ZINC AND ZINC DUST.

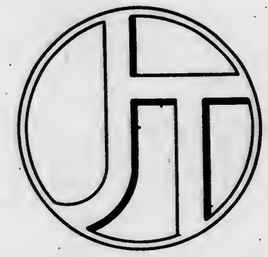
Claims use since January 1934.

CLASS 15

OILS AND GREASES

Ser. No. 528,230. RODMAN CHEMICAL COMPANY, Verona, Pa. Filed July 9, 1947.

R-1



FOR QUENCHING OIL.

Claims use since Nov. 20, 1923.

CLASS 21

ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES

Ser. No. 507,730. JEFFERSON-TRAVIS INCORPORATED, New York, N. Y., assignee of Jefferson-Travis Corporation. Filed Aug. 21, 1947.

FOR RADIO RECEIVERS, RADIO TELEPHONE SETS, RADIO RECEIVING AND PHONOGRAPH RECORDING AND REPRODUCING COMBINATION SETS, ELECTRIC SOUND RECORDERS, AND LOUDSPEAKERS.

Claims use since March 1940.

Ser. No. 527,021. THE EDWIN F. GUTH COMPANY, St. Louis, Mo. Filed July 5, 1947.

TRUCOLITE

Applicant claims ownership of registration No. 121,019.

FOR FIXTURES FOR ELECTRIC LIGHTS.

Claims use since Sept. 15, 1917.

Ser. No. 527,022. THE EDWIN F. GUTH COMPANY, St. Louis, Mo. Filed July 5, 1947.

MAZELITE

Applicant claims ownership of registration No. 172,317.

FOR ELECTRICAL LIGHTING FIXTURES.

Claims use since Mar. 1, 1922.

Ser. No. 527,250. THE INDIANA STEEL PRODUCTS COMPANY, Chicago, Ill. Filed July 5, 1947.

INDALLOY

FOR PERMANENT MAGNETS.
Claims use since Apr. 26, 1947.

Ser. No. 527,256. AUTOMATIC SWITCH COMPANY, New York, N. Y. Filed July 5, 1947.

ASCO

Applicant claims ownership of registration No. 236,629.
FOR AUTOMATIC ELECTRICAL SWITCHES, MAGNET AND SOLENOID OPERATED SWITCHES AND RELAYS.
Claims use since Aug. 5, 1941.

Ser. No. 527,432. DYNAMATIC CORPORATION, Kenosha, Wis. Filed July 5, 1947.

DYNASPEDE

Applicant claims ownership of registration No. 409,713.
FOR ELECTRIC DRIVES EACH COMPOSED OF AN ELECTRIC MOTOR, AN EDDY-CURRENT SLIP COUPLING DRIVEN THEREBY AND AN ELECTRONIC CONTROL FOR CONTROLLING THE SLIP SPEED OF THE COUPLING.
Claims use since Apr. 11, 1944.

Ser. No. 527,435. DYNAMATIC CORPORATION, Kenosha, Wis. Filed July 5, 1947.

DYNAVARIO

Applicant claims ownership of registration No. 390,430.
FOR ELECTRICAL GOVERNORS FOR MOTORS.
Claims use since Mar. 26, 1941.

Ser. No. 527,444. DYNAMATIC CORPORATION, Kenosha, Wis. Filed July 5, 1947.

VARIOSYN

Applicant claims ownership of registration No. 361,642.
FOR ELECTRIC MOTORS.
Claims use since June 2, 1938.

Ser. No. 538,584. FRIEDLEY-VOSHARDT COMPANY, Chicago, Ill. Filed Jan. 6, 1948.

KLEEN-KWICK ELECTRIC DISH WASHER

Applicant disclaims the words "Electric Dish Washer" apart from the mark. Applicant claims ownership of registration No. 244,849.
FOR ELECTRIC DISHWASHERS.
Claims use since Jan. 6, 1927.

CLASS 23

CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF

Ser. No. 505,503. LINCOLN ENGINEERING COMPANY, St. Louis, Mo. Filed July 5, 1947.

AUTOLUBER

FOR PORTABLE LUBRICANT-DISPENSING APPARATUS—NAMELY, PORTABLE UNITS MOUNTED ON CASTERS AND EQUIPPED WITH MANUAL GREASE-GUNS, AIR-OPERATED GREASE DISPENSERS, AND CONNECTIONS TO LUBRICANT DRUMS WHICH CAN BE MOUNTED IN THE UNIT.
Claims use since June 1941.

CLASS 29

BROOMS, BRUSHES, AND DUSTERS

Ser. No. 527,903. OWENS BRUSH COMPANY, Toledo, Ohio. Filed July 5, 1947.

Patrician

FOR HAIRBRUSHES.
Claims use since Feb. 17, 1947.

Ser. No. 530,244. OWENS BRUSH COMPANY, Toledo, Ohio. Filed Aug. 1, 1947.

QUEST

FOR DEODORANT.
Claims use since Jan. 4, 1935.

CLASS 8

SMOKERS' ARTICLES, NOT INCLUDING TOBACCO PRODUCTS

Reg. No. 310,447. Registered Feb. 27, 1934. PETER J. SCHWEITZER, INC., Elizabeth, N. J., a corporation of New York. Republished by registrant.

AQUAFUGE

FOR CIGARETTE PAPER.
Claims use since July 1, 1933.

CLASS 11

INKS AND INKING MATERIALS

Reg. No. 266,618. Registered Jan. 28, 1930. THE NELSON-EISMANN COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

AMERICAN BEAUTY

FOR TYPEWRITER RIBBONS.
Claims use since June 17, 1929.

Reg. No. 282,550. Registered Apr. 21, 1931. THE PARKER PEN COMPANY, Janesville, Wis., a corporation of Wisconsin. Republished by registrant.

QUINK

FOR WRITING INK.
Claims use since Dec. 1, 1929.

CLASS 12

CONSTRUCTION MATERIALS

Reg. No. 255,434. Registered Apr. 23, 1929. PENN METAL COMPANY, Cambridge, Mass. Republished by Penn Metal Company, Inc., Boston, Mass., a corporation of Delaware.

Durabond

FOR METAL LATH.
Claims use since Oct. 22, 1928.

Reg. No. 255,453. Registered Apr. 23, 1929. PENN METAL COMPANY, Cambridge, Mass. Republished by Penn Metal Company, Inc., Boston, Mass., a corporation of Delaware.

MESHTEX

FOR METAL LATHING.
Claims use since Nov. 2, 1928.

Reg. No. 255,454. Registered Apr. 23, 1929. PENN METAL COMPANY, Cambridge, Mass. Republished by Penn Metal Company, Inc., Boston, Mass., a corporation of Delaware.

MASTERIB

FOR METAL LATHING.
Claims use since Nov. 2, 1928.

Reg. No. 258,699. Registered July 16, 1929. BLOOMINGTON LIMESTONE COMPANY, Bloomington, Ind., a corporation of Indiana. Republished by registrant.

ASHTONE

FOR BUILDING BLOCKS, MORE PARTICULARLY FOR FACINGS OF STONE.
Claims use since Nov. 21, 1928.

Reg. No. 262,756. Registered Oct. 22, 1929. T. J. MOSS TIE COMPANY, St. Louis, Mo., a corporation of Missouri. Republished by registrant.

MC

FOR RAILROAD CROSSTIES, RAILROAD SWITCH TIES, TIMBERS FOR CONSTRUCTION PURPOSES, POLES, PILING.
Claims use since 1902.

Reg. No. 266,832. Registered Feb. 4, 1930. THE PRESSTITE ENGINEERING COMPANY, St. Louis, Mo., a corporation of Missouri. Republished by registrant.

KALKITITE

FOR DRY, POWDERED ASPHALT COMPOUNDED WITH OTHER INGREDIENTS FOR USE IN PRODUCING A CEMENT.
Claims use since June 25, 1929.

Reg. No. 275,250. Registered Sept. 16, 1930. ASBESTOS SHINGLE, SLATE & SHEATHING COMPANY, Ambler, Pa. Republished by Keasbey & Mattison Company, Ambler, Pa., a corporation of Pennsylvania.

DUOFACE

FOR FIREPROOF ROOFING COVERING, ROOFING SLATE, SHINGLES.
Claims use since Mar. 12, 1929.

Reg. No. 284,025. Registered June 9, 1931. ARMSTRONG-NEWPORT COMPANY, Carrollville, Wis. Republished by Armstrong Cork Company, Manheim Township, Lancaster County, Pa., a corporation of Pennsylvania.

Temlok

FOR HEAT AND SOUND INSULATION MATERIAL.
Claims use since Sept. 10, 1930.

Reg. No. 285,660. Registered Aug. 4, 1931. AMBLER ASBESTOS SHINGLE & SHEATHING COMPANY, Ambler, Pa. Republished by Keasbey & Mattison Company, Ambler, Pa., a corporation of Pennsylvania.

RESISTAL

FOR ASBESTOS COMPOSITION BOARD.
Claims use since Dec. 1, 1930.

Reg. No. 288,655. Registered Nov. 3, 1931. ARMSTRONG CORK & INSULATION COMPANY, Lancaster, Pa. Republished by Armstrong Cork Company, Manheim Township, Lancaster County, Pa., a corporation of Pennsylvania.

Vibracork

FOR ISOLATION MATERIAL FOR DAMPENING VIBRATION AND SOUND, PARTICULARLY THAT CAUSED BY MOVING MACHINERY.
Claims use since Apr. 28, 1931.

Reg. No. 292,405. Registered Mar. 15, 1932. BRADFIELD BUILDING PRODUCTS CO., Los Angeles, Calif. Republished by L. M. Scofield Company, Los Angeles, Calif., a firm.

PERMALITH

FOR CEMENT HARDENERS AND COLORS.
Claims use since July 1, 1931.

Reg. No. 294,095. Registered May 17, 1932. TRUSSBILT STEEL DOORS, INC., Minneapolis, Minn. Republished by Siems Bros., Inc., St. Paul, Minn., a corporation of Delaware.

TRUSSBILT

The drawing is lined for the color red.
FOR HOLLOW SHEET METAL UNITS FOR DOORS, FRAMES, LOUVERS, FLOORS, WALLS, ROOFS, PARTITIONS, AND FORMS FOR CONCRETE STRUCTURE.
Claims use since June 9, 1931.

Reg. No. 303,093. Registered May 9, 1933. ARMSTRONG CORK & INSULATION COMPANY, Lancaster, Pa. Republished by Armstrong Cork Company, Manheim Township, Lancaster County, Pa., a corporation of Pennsylvania.

Armstrong's EF

FOR HEAT INSULATING MATERIAL.
Claims use since Sept. 22, 1932.

Reg. No. 306,321. Registered Sept. 12, 1933. PENN METAL COMPANY, Boston, Mass. Republished by Penn Metal Company, Inc., Boston, Mass., a corporation of Delaware.

Pennmetal 1869

FOR METAL LATHS, METAL CORNERS, METAL CORNER BEADS, METAL STRUCTURAL CHANNELS, STRUCTURAL TUBULAR FORMS.
Claims use since Oct. 13, 1932.

Reg. No. 309,466. Registered Jan. 16, 1934. KEASBEY & MATTISON COMPANY, Ambler, Pa. Republished by Keasbey & Mattison Company (1934), Ambler, Pa., a corporation of Pennsylvania.

"LAMINO"

FOR INSULATION PRODUCTS, ESPECIALLY ADAPTED AS A PIPE COVERING.
Claims use since May 17, 1932.

Reg. No. 312,580. Registered May 1, 1934. ARMSTRONG-NEWPORT COMPANY, Carrollville, Wis. Republished by Armstrong Cork Company, Manheim Township, Lancaster County, Pa., a corporation of Pennsylvania.

TEMBOARD

FOR FIBER BOARD, COMPOSITE BOARD, CONSTRUCTION BOARD, SYNTHETIC OR ARTIFICIAL LUMBER, AND HARD BOARD.
Claims use since Nov. 27, 1933.

Reg. No. 313,273. Registered May 22, 1934. COLUMBIAN ENAMELING & STAMPING CO., INC., Terre Haute, Ind., a corporation of Indiana. Republished by registrant.

Porcelite

FOR WALL TILE, CLIP BOARDS, AND CEMENT AND A COMBINED WALL TILE, CLIP BOARD, AND CEMENT.
Claims use since Oct. 1, 1931.

Reg. No. 316,761. Registered Sept. 4, 1934. KEASBEY & MATTISON COMPANY, Ambler, Pa. Republished by Keasbey & Mattison Company (1934), Ambler, Pa., a corporation of Pennsylvania.

K&M

FOR ASBESTOS CEMENTS, ASBESTOS PAPERS, ASBESTOS SHINGLES, ASBESTOS MILL BOARD, WOOL FELT INSULATION, FURNACE CEMENT, THERMAL INSULATING TAPES, COMPOSITION SHINGLES, ASBESTOS BOARDS, COMPOSITION BOARDS, INSULATING CEMENTS, INSULATION PIPE COVERINGS, INSULATION BOILER COVERINGS, WALL BOARDS, INSULATION BLANKETS; CORRUGATED AIR CELL PAPER FOR CONSTRUCTION, BUILDING AND INSULATING PURPOSES; MAGNESIA INSULATION COMPRISING MAGNESIUM AND ASBESTOS FIBRE, AND MISCELLANEOUS BUILDING PRODUCTS COMPOSED OF ASBESTOS CEMENT COMPOSITIONS—NAMELY DOORS, STUDDING, AND PARTITIONS.
Claims use since Jan. 1, 1875.

Reg. No. 320,405. Registered Dec. 25, 1934. STEELOX COMPANY, Chicago, Ill. Republished by The American Rolling Mill Company, Middletown, Ohio, a corporation of Ohio.

Steelox

FOR METAL PILING, METAL PANELS, METAL FRAMES FOR DOORS AND WINDOWS, METAL LATH AND FASTENING DEVICES FOR SUCH PANELS, FRAMES, AND LATHS.
Claims use since Aug. 1, 1932.

Reg. No. 324,720. Registered May 28, 1935. KEASBEY & MATTISON COMPANY, Ambler, Pa. Republished by Keasbey & Mattison Company (1934), Ambler, Pa., a corporation of Pennsylvania.

Sheetflextos

FOR ASBESTOS CEMENT BOARDS, COMPOSITION BOARDS, WALL BOARD, AND ASBESTOS MILL BOARDS.
Claims use since Nov. 15, 1934.

CLASS 13

HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES

Reg. No. 285,964. Registered Aug. 11, 1931. HILL-SHAW COMPANY, Chicago, Ill. Republished by Hill-Shaw Company, Chicago, Ill., a corporation of Delaware.

VACULATOR

FOR GLASS COFFEE BREWERS.
Claims use since Sept. 12, 1930.

Reg. No. 286,731. Registered Sept. 1, 1931. THE OSCAR C. RIXSON COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

RXN

FOR BUILDERS' HARDWARE—NAMELY, HINGES, CASEMENT AND TRANSOM OPERATORS, DOOR CHECKS, DOOR HOLDERS, DOOR AND CASEMENT PIVOTS, CASEMENT HOLDERS, STAYS AND PARTS THEREOF.
Claims use since Mar. 31, 1931.

CLASS 14

METALS AND METAL CASTINGS AND FORGINGS

Reg. No. 290,355. Registered Jan. 5, 1932. THE AMERICAN ROLLING MILL COMPANY, Middletown, Ohio, a corporation of Ohio. Republished by registrant.

PAINTGRIP

FOR GALVANIZED IRON AND STEEL SHEETS.
Claims use since July 24, 1931.

Reg. No. 292,998. Registered Apr. 5, 1932. MAGNOLIA METAL COMPANY, New York, N. Y., a corporation of West Virginia. Republished by registrant, present location Elizabeth, N. J.

CP-12

FOR BEARING ALLOYS.
Claims use since Nov. 1, 1931.

CLASS 15

OILS AND GREASES

Reg. No. 259,036. Registered July 23, 1929. THE PURE OIL COMPANY, Chicago, Ill., a corporation of Ohio. Republished by registrant.

PURELUBE

FOR LUBRICATING OILS AND GREASES.
Claims use since Aug. 31, 1928.

Reg. No. 264,485. Registered Nov. 26, 1929. THE PURE OIL COMPANY, Chicago, Ill., a corporation of Ohio. Republished by registrant.

CRYSTALENE

FOR KEROSENE.
Claims use since September 1924.

Reg. No. 275,732. Registered Sept. 30, 1930. THE PURE OIL COMPANY, Chicago, Ill., a corporation of Ohio. Republished by registrant.

THE PURE OIL COMPANY, U.S.A.

The abbreviation "U. S. A." is disclaimed.
FOR ILLUMINATING OILS, MOTOR FUEL OILS, LUBRICATING OILS, LUBRICATING GREASES, AND FUEL OILS.
Claims use since Apr. 1, 1930.

Reg. No. 323,183. Registered Apr. 2, 1935. THE PURE OIL COMPANY, Chicago, Ill., a corporation of Ohio. Republished by registrant.

Xcel
THE PURE OIL CO. U.S.A.

The abbreviation "U. S. A." is disclaimed.
FOR MOTOR FUEL OILS.
Claims use since Oct. 23, 1934.

CLASS 16

PAINTS AND PAINTERS' MATERIALS

Reg. No. 194,339. Registered Jan. 20, 1925. BAKO PROCESS COMPANY, Minneapolis, Minn. Republished by J. Edw. Collins, Minneapolis, Minn.

BAKO

FOR READY-MIXED PAINTS, PAINT ENAMEL, CRACK SEALER AND PAINT REMOVER.
Claims use since June 5, 1924.

Reg. No. 285,885. Registered Aug. 11, 1931. THE DAVIES-YOUNG SOAP COMPANY, Dayton, Ohio, a corporation of Ohio. Republished by registrant.

AQUAWAX

FOR LIQUID WAX FOR RUBBER FLOORS, RUBBER TILE, ASPHALT TILE, MASTIC FLOORING, AND ALL FLOOR COVERINGS USING RUBBER IN THEIR COMPOSITIONS.
Claims use since Feb. 20, 1931.

Reg. No. 285,896. Registered Aug. 11, 1931. THE DAVIES-YOUNG SOAP COMPANY, Dayton, Ohio, a corporation of Ohio. Republished by registrant.

BUCKEYE

FOR LIQUID WAX FOR FLOORS, LINOLEUM, FURNITURE, AND AUTOMOBILES.
Claims use since Feb. 20, 1931.

Reg. No. 298,142. Registered Oct. 11, 1932. HOWE & FRENCH, INC., Boston, Mass., a corporation of Massachusetts. Republished by registrant.

Linol-Cote

No claim is made to color as a specific feature of the trade-mark.
FOR FLOOR AND LINOLEUM FINISH IN THE NATURE OF VARNISH.
Claims use since Dec. 11, 1931.

Reg. No. 298,945. Registered Nov. 15, 1932. ARMSTRONG CORK COMPANY, Lancaster, Pa., a corporation of Pennsylvania. Republished by registrant, present location Manheim Township, Lancaster County, Pa.

LINOGLOSS

FOR POLISHING PREPARATION FOR HARD SURFACE FLOOR COVERING.
Claims use since June 10, 1932.

Reg. No. 299,273. Registered Nov. 29, 1932. WILLIAM GRAHAM & COMPANY, Baltimore, Md. Republished by The Warner-Graham Company, Baltimore, Md., a corporation of Maryland.

ORIOLE

FOR TURPENTINE AND LINSEED OIL.
Claims use since Jan. 1, 1880.

Reg. No. 299,564. Registered Dec. 13, 1932. VELSICOL CORPORATION, Chicago, Ill., a corporation of Illinois. Republished by registrant.

VELSICOL

The drawing is lined for blue and yellow.
For LACQUER, VARNISH, STAIN, AND PAINT IN READY MIXED OR PASTE FORM.
Claims use since Mar. 14, 1932.

Reg. No. 299,670. Registered Dec. 13, 1932. VELSICOL CORPORATION, Chicago, Ill., a corporation of Illinois. Republished by registrant.

VELSICOL

FOR LACQUER, VARNISH, STAIN, AND PAINT IN READY MIXED OR PASTE FORM.
Claims use since Mar. 14, 1932.

Reg. No. 311,362. Registered Mar. 20, 1934. THE MEARL CORPORATION, Brooklyn, N. Y., a corporation of New Jersey. Republished by registrant.

MEARLMAID PEARL ESSENCE

The words "Pearl Essence" are disclaimed.
FOR PEARL ESSENCE.
Claims use since June 9, 1933.

Reg. No. 323,308. Registered Apr. 9, 1935. I. F. LAUCKS, INC., Seattle, Wash. Republished by Monsanto Chemical Company, St. Louis, Mo., a corporation of Delaware.

VELLO

FOR COLD WATER PAINTS AND CALCIMINES.
Claims use since Dec. 14, 1934.

CLASS 19

VEHICLES

Reg. No. 290,811. Registered Jan. 19, 1932. AUTO RADIATOR MANUFACTURING COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

EUREKA

FOR VEHICLE RADIATORS, RADIATOR CORES, AND AUTOMOBILE HEATERS UTILIZING HOT WATER FROM THE ENGINE.
Claims use since July 12, 1928, on vehicle radiator cores; and since Aug. 20, 1931, on automobile heaters.

Reg. No. 310,208. Registered Feb. 13, 1934. BRAGG-KLIESRATH CORPORATION, South Bend, Ind. Republished by Bendix Aviation Corporation, South Bend, Ind., a corporation of Delaware.

THE SEAL OF VACUUM B-K POWER SAFER DRIVING

The words "Vacuum Power" are disclaimed.
FOR BRAKES AND BRAKE SYSTEMS AND PARTS THEREOF.
Claims use since Nov. 22, 1932.

CLASS 20

LINOLEUM AND OILED CLOTH

Reg. No. 299,122. Registered Nov. 22, 1932. ARMSTRONG CORK COMPANY, Lancaster, Pa., a corporation of Pennsylvania. Republished by registrant, present location Manheim Township, Lancaster County, Pa.

LINOWALL

FOR LINOLEUM AND FELT BASE WALL COVERINGS.
Claims use since Aug. 13, 1932.

CLASS 21

ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES

Reg. No. 195,484. Registered Feb. 24, 1925. ABSOLUTE CON-TAC-TOR CORPORATION, Beloit, Wis. Republished by Minneapolis-Honeywell Regulator Company, Minneapolis, Minn., a corporation of Delaware.

CON-TAC-TOR

The word "Contactor" is disclaimed.
FOR MERCURY SWITCHES, PARTS THEREOF, AND OPERATING MECHANISM THEREFOR.
Claims use since Mar. 15, 1921.

Reg. No. 225,976. Registered Mar. 29, 1927. WASMUTH-GOODRICH COMPANY, Peru, Ind. Republished by Emerson Radio and Phonograph Corporation, New York, N. Y., a corporation of New York.

Emerson PHONORADIO

FOR COMPLETE RADIO RECEIVING SETS ADAPTED TO COMBINATION WITH PHONOGRAPHS.
Claims use since Mar. 14, 1924.

Reg. No. 258,355. Registered July 2, 1929. THE EDWIN F. GUTH COMPANY, St. Louis, Mo., a corporation of Missouri. Republished by registrant.

LIGHT-O-DAY

FOR ELECTRIC-LIGHTING FIXTURES.
Claims use since Jan. 19, 1928.

Reg. No. 284,140. Registered June 16, 1931. DUMARI TEXTILE CO., INC., New York, N. Y., a corporation of New York. Republished by registrant.

DUMARI

FOR FABRICS IN THE PIECE OF COTTON, LINEN, WOOL, SILK, AND RAYON AND/OR COMBINATION THEREOF.
Claims use since Feb. 13, 1924.

Reg. No. 289,313. Registered Nov. 24, 1931. AMERICAN WOOLEN COMPANY, Boston, Mass., and New York, N. Y., a Massachusetts corporation. Republished by registrant, present location New York, N. Y.

B-4001

FOR WORSTEDS IN THE PIECE.
Claims use since Sept. 22, 1930.

Reg. No. 290,957. Registered Jan. 19, 1932. AMERICAN WOOLEN COMPANY, Boston, Mass., and New York, N. Y., a corporation of Massachusetts. Republished by registrant, present location New York, N. Y.

SAWYER

FOR WOOLEN PIECE GOODS.
Claims use since 1824.

Reg. No. 292,327. Registered Mar. 15, 1932. MARSHALL FIELD & COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

SUPERWEAR

FOR SHEETS AND PILLOWCASES OF COTTON.
Claims use since November 1928.

Reg. No. 293,155. Registered Apr. 12, 1932. AMERICAN WOOLEN COMPANY, New York, N. Y., and Boston, Mass., a corporation of Massachusetts. Republished by registrant, present location New York, N. Y.

THE GREATEST NAME

FOR WOOLEN PIECE GOODS.
Claims use since Dec. 10, 1931.

Reg. No. 316,189. Registered Aug. 21, 1934. REAL SPORT CLOTHING COMPANY, Philadelphia, Pa. Republished by Samuel Caplin, doing business as Real Sport Clothing Company, Philadelphia, Pa.

X-pand-X

FOR TEXTILE FABRICS OF WOOL, COTTON, AND LINEN.
Claims use since Jan. 16, 1934.

Reg. No. 320,936. Registered Jan. 15, 1935. AMERICAN WOOLEN COMPANY, New York, N. Y., a corporation of Massachusetts. Republished by registrant.

SIESTA

FOR WOOLEN PIECE GOODS PARTICULARLY SUITABLE FOR BATH ROBES.
Claims use since July 5, 1934.

CLASS 43

THREAD AND YARN

Reg. No. 317,711. Registered Oct. 2, 1934. KEASBEY & MATTISON COMPANY, Ambler, Pa. Republished by Keasbey & Mattison Company (1934), Ambler, Pa., a corporation of Pennsylvania.

K&M

FOR ASBESTOS THREADS, ASBESTOS YARNS, ASBESTOS FLAT THREAD TAPES ADAPTED FOR USE IN WEAVING CLOTH, AND USED IN CLOTHES MANUFACTURE.
Claims use since about Jan. 1, 1875.

CLASS 44

DENTAL, MEDICAL, AND SURGICAL APPLIANCES

Reg. No. 265,413. Registered Dec. 24, 1929. KOTEX COMPANY, Chicago, Ill. Republished by International Cellucotton Products Company, Chicago, Ill., a corporation of Delaware.

KOTEX

FOR SANITARY BELTS.
Claims use since Jan. 3, 1929.

Reg. No. 312,818. Registered May 8, 1934. KIMBERLY-CLARK CORPORATION, Neenah, Wis., a corporation of Delaware. Republished by registrant.

SANEK

FOR MANICURING SQUARES USEFUL FOR REMOVING LACQUER FROM FINGER NAILS.
Claims use since Sept. 11, 1933.

CLASS 45

SOFT DRINKS AND CARBONATED WATERS

Reg. No. 306,812. Registered Sept. 26, 1933. DUPONT PHARMACY, INC., Washington, D. C. Republished by 40 Below Beverage Company, Washington, D. C., a firm.

40 BELOW

FOR MALTLESS, NON-ALCOHOLIC BEVERAGES SOLD AS SOFT DRINKS AND SYRUPS FOR MAKING THE SAME.
Claims use since May 1, 1933.

CLASS 46

FOODS AND INGREDIENTS OF FOODS

Reg. No. 136,355. Registered Nov. 2, 1920. CANNON VALLEY MILLING COMPANY, Minneapolis, Minn. Republished by Cannon Valley Milling Co. (1938), Minneapolis, Minn., a corporation of Minnesota.

FOR WHEAT-FLOUR.
Claims use since September 1915.

Reg. No. 136,356. Registered Nov. 2, 1920. CANNON VALLEY MILLING COMPANY, Minneapolis, Minn. Republished by Cannon Valley Milling Co. (1938), Minneapolis, Minn., a corporation of Minnesota.

INVADER

FOR WHEAT-FLOUR.
Claims use since Apr. 30, 1920.

Reg. No. 137,139. Registered Nov. 23, 1920. CANNON VALLEY MILLING COMPANY, Minneapolis, Minn. Republished by Cannon Valley Milling Co. (1938), Minneapolis, Minn., a corporation of Minnesota.

ALLGOLD

FOR WHEAT-FLOUR.
Claims use since 1906.

Reg. No. 192,688. Registered Dec. 9, 1924. SUNSET NUT SHELLING COMPANY, San Francisco, Calif. Republished by Sunset-Sternau Food Company, San Francisco, Calif., a corporation of California.

SUNSET

FOR WALNUTS, SHELLED OR UNSHELLED, OR CANDIED OR SALTED; FILBERTS, SHELLED OR UNSHELLED, CANDIED OR SALTED; ALMONDS, SHELLED OR UNSHELLED, OR CANDIED OR SALTED; HAZELNUTS, SHELLED OR UNSHELLED, CANDIED OR SALTED; PECANS, SHELLED OR UNSHELLED, CANDIED OR SALTED; PINEAPPLE, CANDIED OR DRIED; FIGS, DRIED OR CANDIED; DATES, DRIED OR CANDIED; PRUNES, DRIED OR CANDIED; NATURAL RAISINS; ORANGE PEEL, DRIED OR CANDIED; LEMON PEEL, DRIED OR CANDIED; CITRON, DRIED OR CANDIED; DATES, STUFFED OR FILLED WITH WALNUTS OR ALMONDS, OR PECANS, OR FILBERTS, OR HAZELNUTS; APRICOTS, STUFFED OR FILLED WITH WALNUTS, OR ALMONDS, OR PECANS, OR FILBERTS, OR HAZELNUTS; PRUNES, STUFFED OR FILLED WITH WALNUTS OR ALMONDS, OR PECANS, OR FILBERTS, OR HAZELNUTS; AND NUTS AND RAISINS MIXED.
Claims use since Apr. 1, 1903.

Reg. No. 237,575. Registered Jan. 10, 1928. CANNON VALLEY MILLING COMPANY, Minneapolis, Minn. Republished by Cannon Valley Milling Co. (1938), Minneapolis, Minn., a corporation of Minnesota.

FOR WHEAT FLOUR.
Claims use since Sept. 23, 1908.

Reg. No. 248,210. Registered Oct. 16, 1928. PIE BAKERIES OF AMERICA INC., Newark, N. J. Republished by Wagner Baking Corporation, Newark, N. J., a corporation of Delaware.

The phrase "Famous Homemade Pies" is disclaimed.
FOR PIES.
Claims use since Feb. 15, 1926.

Reg. No. 258,397. Registered July 9, 1929. THE ROBERTS COFFEE COMPANY, Cleveland, Ohio, a corporation of Ohio. Republished by registrant.

CLARK'S COFFEE

The word "Coffee" is disclaimed. The drawing is lined for the color green.
FOR COFFEE.
Claims use since on or about Feb. 17, 1920.

Reg. No. 263,331. Registered Nov. 5, 1929. J. STROMEYER COMPANY, Philadelphia, Pa., a corporation of Pennsylvania. Republished by registrant.

YANKIBOY

FOR TABLE AND COOKING SYRUPS.
Claims use since Apr. 11, 1929.

Reg. No. 265,109. Registered Dec. 17, 1929. THE ROBINSON MILLING COMPANY, Salina, Kans., a corporation of Kansas. Republished by registrant.

FOR PLAIN FLOUR AND A SELF-RISING FLOUR.
Claims use since June 10, 1929.

Reg. No. 285,854. Registered Aug. 11, 1931. STROHMEYER & ARPE COMPANY, New York, N. Y., a corporation of New York. Republished by registrant.

CANARI

FOR DRIED BEANS.
Claims use since the middle of 1928.

Reg. No. 286,334. Registered Aug. 25, 1931. C. F. SIMONIN'S SONS, INC., Philadelphia, Pa., a corporation of Delaware. Republished by registrant.

SIMCO SHORTENING

The word "Shortening" is disclaimed.
FOR SHORTENINGS COMPOSED OF VEGETABLE SUBSTANCES AND OF COMBINATIONS OF ANIMAL AND VEGETABLE SUBSTANCES.
Claims use since Mar. 27, 1931.

Reg. No. 292,266. Registered Mar. 8, 1932. STROHMEYER & ARPE COMPANY, New York, N. Y., a corporation of New York. Republished by registrant.

SEXASILL

FOR DRESSED SALTED HERRING IN BULK AND CANNED.
Claims use since February 1930.

Reg. No. 298,934. Registered Nov. 15, 1932. EMPIRE STATE FLOUR MILLS, Buffalo, N. Y. Republished by Standard Milling Company, Chicago, Ill., a corporation of Illinois.

MOTHER'S PET

FOR WHEAT FLOUR.
Claims use since Feb. 29, 1932.

Reg. No. 305,355. Registered Aug. 15, 1933. STROHMEYER & ARPE COMPANY, New York, N. Y., a corporation of New York. Republished by registrant.

KIPS

FOR KIPPERED HERRING, AND KIPPER SNACKS.
Claims use since Feb. 15, 1933.

Reg. No. 306,459. Registered Sept. 19, 1933. THE PROCTER & GAMBLE COMPANY, Cincinnati, Ohio, a corporation of Ohio. Republished by registrant.

COTOFLAKES

FOR HYDROGENATED FLAKED COTTONSEED OIL USED AS A FOOD.
Claims use since Mar. 21, 1933.

Reg. No. 307,630. Registered Oct. 31, 1933. THE PROCTER & GAMBLE COMPANY, Cincinnati, Ohio, a corporation of Ohio. Republished by registrant.

HIGH RATIO

FOR VEGETABLE SHORTENING IN SEMI-SOLID FORM.
Claims use since May 18, 1933.

Reg. No. 309,356. Registered Jan. 9, 1934. P. F. PETERSEN BAKING COMPANY, Omaha, Nebr., a corporation of Nebraska. Republished by registrant.

PETER PAN VITA-WHEAT BREAD

The words "Wheat" and "Bread" are disclaimed.
FOR BREAD.
Claims use since Apr. 1, 1932.

Reg. No. 313,126. Registered May 15, 1934. OELERICH & BERRY COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

FRUIT MAID

FOR JAMS AND JELLIES.
Claims use since Dec. 8, 1933.

Reg. No. 316,439. Registered Aug. 28, 1934. OELERICH & BERRY COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

RED HEN

FOR MOLASSES.
Claims use since Sept. 15, 1908.

Reg. No. 318,634. Registered Oct. 30, 1934. THE J. B. INDERRIEDEN CO., Chicago, Ill., a corporation of Illinois. Republished by registrant.

BIG FARM

FOR FOODS FOR HUMAN CONSUMPTION, AND MORE PARTICULARLY CANNED VEGETABLES.
Claims use since fall of 1915.

CLASS 47

WINES

Reg. No. 320,775. Registered Jan. 8, 1935. BRAGNO & COMPANY, Chicago, Ill., a firm. Republished by registrant.

FOR WINES.
Claims use since Dec. 5, 1933.

CLASS 48

MALT BEVERAGES AND LIQUORS

Reg. No. 313,730. Registered June 5, 1934. MINNEAPOLIS BREWING COMPANY, Minneapolis, Minn., a corporation of Minnesota. Republished by registrant.

The word "Beer" is disclaimed. The drawing is lined for black, red, and gold.
FOR BEER.
Claims use since Dec. 14, 1933.

Reg. No. 317,072. Registered Sept. 11, 1934. FALSTAFF BREWING CORPORATION, St. Louis, Mo., a corporation of Delaware. Republished by registrant.

Super-X

FOR MALT BEVERAGES WITH NOT MORE THAN THE LEGAL ALCOHOLIC CONTENT.
Claims use since June 1, 1925.

CLASS 49

DISTILLED ALCOHOLIC LIQUORS

Reg. No. 282,277. Registered Apr. 14, 1931. RED STAR YEAST & PRODUCTS COMPANY, Milwaukee, Wis., a corporation of Wisconsin. Republished by registrant.

FOR GRAIN ALCOHOL.
Claims use since Dec. 4, 1929.

Reg. No. 311,848. Registered Apr. 10, 1934. STROHMEYER & ARPE COMPANY, New York, N. Y., a corporation of New York. Republished by registrant.

OPERA CLUB

The word "Club" is disclaimed.
FOR GIN.
Claims use since 1902.

Reg. No. 311,849. Registered Apr. 10, 1934. STROHMEYER & ARPE COMPANY, New York, N. Y., a corporation of New York. Republished by registrant.

ASCOT CLUB

The word "Club" is disclaimed.
FOR GIN.
Claims use since 1906.

Reg. No. 316,368. Registered Aug. 21, 1934. BUSHMILL WINE & PRODUCTS COMPANY, INC., Scranton, Pa. Republished by Brookside Distilling Products Corporation, Scranton, Pa., a corporation of Delaware.

Olabrook

FOR WHISKEY AND BRANDY.
Claims use since Apr. 12, 1934.

Reg. No. 316,727. Registered Sept. 4, 1934. BUSHMILL WINE & PRODUCTS CO., INC., Scranton, Pa. Republished by Brookside Distilling Products Corporation, Scranton, Pa., a corporation of Delaware.

Brookside

FOR WHISKEY.
Claims use since Jan. 6, 1934.

Reg. No. 317,189. Registered Sept. 18, 1934. BUSHMILL WINE & PRODUCTS COMPANY, INC., Scranton, Pa. Republished by Brookside Distilling Products Corporation, Scranton, Pa., a corporation of Delaware.

Penn Valley

FOR WHISKEY.
Claims use since Apr. 14, 1934.

Reg. No. 319,858. Registered Dec. 4, 1934. CONTINENTAL DISTILLING CORPORATION, Philadelphia, Pa. Republished by Sunset Incorporated, Chicago, Ill., a corporation of Illinois.

SUNSET

FOR WHISKEY, GIN, RUM, BRANDY, AND ALCOHOLIC CORDIALS.
Claims use since Aug. 8, 1934.

CLASS 50

MERCHANDISE NOT OTHERWISE CLASSIFIED

Reg. No. 283,037. Registered May 12, 1931. ARMSTRONG CORK COMPANY, Lancaster, Pa., a corporation of Pennsylvania. Republished by registrant.

Artmold

FOR MOLDED BOTTLE AND JAR CLOSURE OR CAPS.
Claims use since July 31, 1930.

Reg. No. 323,933. Registered May 7, 1935. WALTER R. SCHINDLER, Los Angeles, Calif. Republished by Hot Kap Manufacturing Company, Los Angeles, Calif., a partnership.

Hotents

FOR PLANT PROTECTORS.
Claims use since Aug. 15, 1934.

REISSUES

MARCH 9, 1948

22,980

SPRING HANGER

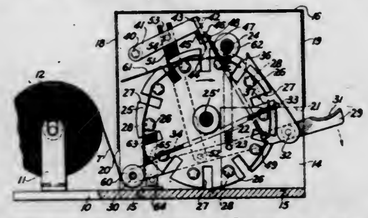
Albert B. Donkersley and James R. Welshman, Cranston, R. I., assignors to Grinnell Corporation, Providence, R. I., a corporation of Delaware

Original No. 2,397,094, dated March 26, 1946, Serial No. 539,579, June 9, 1944. Application for reissue November 8, 1947, Serial No. 784,922

2 Claims. (Cl. 248—54)

1. A spring hanger for supporting a known load with a predetermined variation in supporting effect during movement of the load within a limited range, said hanger comprising a casing having plates secured to its top and bottom ends, a movable plate within the casing, a hanger rod engaging said movable plate and extending downward through the bottom end plate for connection with the load to be supported, and a spring confined within said casing between the bottom plate thereof and the movable plate; said spring having a free length greater than the height of said casing and having a spring constant corresponding to the said predetermined variation and being pre-compressed so as to limit its working range to one in which the spring force exerted while yieldingly supporting the load is not less than a selected multiple of the spring constant.

22,981



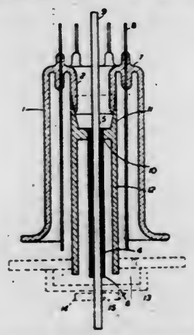
AUTOMATIC TAPE DISPENSER AND CUTTER

Harold L. Fitch, Rochester, N. Y., assignor, by mesne assignments, to Better Packages Inc., Shelton, Conn., a corporation of New York

Original No. 2,298,360, dated October 13, 1942, Serial No. 273,089, May 11, 1939. Application for reissue September 17, 1943, Serial No. 502,833

19 Claims. (Cl. 164—48)

1. A tape dispenser for a sticky surfaced tape comprising, means for rotatably supporting a supply roll of tape, a movable shearing member, means for pulling said tape in a strip from said roll and adapted to carry said tape in strip form past said shearing member where it is cut into short lengths, and adapted to deliver said short lengths to a position for removal from said dispenser, said means including a movable feeding plate, spaced members on said plate, means for directing said tape toward said members so that the sticky surface thereof is pressed into adhesive contact with the same, and which adhesive contact connects the tape to said members, means for intermittently advancing said feeding plate whereby the tape supported by said spaced members is moved horizontally past said shearing member, and means for intermittently operating said shearing member whereby the same is adapted to cut the tape between said spaced members, said shearing member operating means associated with said advancing means for said feeding plate, whereby it is automatically operated in timed relation with operation of said feeding plate advancing means.

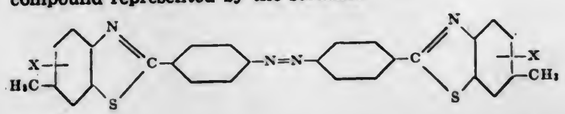


22,982

MECHANICAL ADJUSTMENT OF ELEMENTS MOUNTED INSIDE VACUUM TUBES

Christopher Henry Foulkes, London, England, assignor to Standard Telephones and Cables Limited, London, England, a British company

Original No. 2,368,821, dated February 6, 1945, Serial No. 498,802, August 16, 1943. Application for reissue February 5, 1947, Serial No. 726,714. In Great Britain November 26, 1942



7 Claims. (Cl. 250—27.5)

1. A sealed electronic tube having a glass stem portion, a rotatably adjustable sealed mounting for adjusting the position of an element coupled to said mounting within said tube comprising a flexible metal member having a sealed connection to the stem portion and a solid adjusting member extending through and sealed to the flexible member adjacent the outer end thereof, the flexible metal member having a thin circumferential wall portion torsionally deformable by rotation of the adjusting member to provide rotary adjustment of the mounting.

22,983
MANUFACTURE OF DYESTUFFS
Norman Hulton Haddock, Blackley, Manchester, England, assignor to Imperial Chemical Industries Limited, a corporation of Great Britain
No Drawing. Original No. 2,368,658, dated February 6, 1945, Serial No. 443,670, May 19, 1942. Application for reissue September 17, 1947, Serial No. 774,663. In Great Britain May 23, 1941
8 Claims. (Cl. 260—127)

1. A sulfur dye made by heating a symmetrical compound represented by the formula

in which X is one of a group consisting of thiocyano and alkali-metal alkyl-xanthato, with sodium sulfide and water in an inert liquid organic solvent until the corresponding di-mercapto compound is formed, removing the solvent and adding an oxidizing agent until the corresponding polydisulfide is formed.

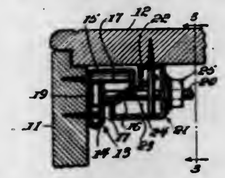
PLANT PATENTS

GRANTED MARCH 9, 1948

Owing to the fact that almost all of the illustrations of the plant patents are in colors, it is not practicable to print a cut of the drawing.

787
NECTARINE PLANT
Herbert C. Swim, Ontario, Calif., assignor to Armstrong Nurseries, Inc., Ontario, Calif., a corporation of California
Application December 30, 1946, Serial No. 719,183
1 Claim. (Cl. 47—62)

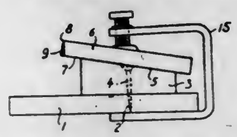
A new and distinct variety of nectarine plant characterized as to novelty by the red coloring of the yellow flesh of the fruit particularly about the pit; the rich flavor of the fruit; the intense all-over red color of the crispy thin skin; the early blooming habit of the tree and showy character of the blooms due both to the large quantity and large size of the same; its great resistance to delayed dormancy and consequent heavy productivity in Southern California and in other peach growing sections with similar climate, substantially as shown and described.



788
ROSE PLANT
John H. van Barneveld, Puente, Calif., assignor to The Conard-Pyle Company, West Grove, Pa., a corporation of Pennsylvania
Application February 28, 1947, Serial No. 731,441
1 Claim. (Cl. 47—61)

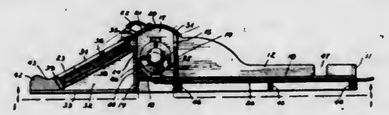
A new and distinct variety of rose plant, having a similarity to its parent in respect to its leathery and deep green foliage, and urn shape and distinctive coloring of its bud and flower, but distinguished therefrom by its strong and vigorous climbing habit, substantially as shown and described.

PATENTS



GRANTED MARCH 9, 1948

2,437,235
CORNER ASSEMBLY AND FASTENING MEANS FOR KNOCKDOWN COUNTERS AND THE LIKE
John Aksten, Minneapolis, Minn.
Application August 17, 1944, Serial No. 549,922
6 Claims. (Cl. 312—145)



3. A knockdown store counter corner assembly of the class described comprising a counter part adapted for vertical disposition, the upper end thereof being rabbeted, a corner fastening rail secured to an inner face of said part in close proximity to and extending longitudinally with the rabbeted edge, a second counter part disposed at right angles to the first named part and having its edge portion rabbeted, the rabbeted edges of the respective parts being adjoined in a scarf-joint, a second rail connected to the underside of said second named part and disposed alongside of said first named rail, adjacent portions of the respective rails being provided with inclined abutments and said abutments being disposed in overlapping and interfitting relationship, and bolts secured in and fastening said rails together in assembled relationship, said bolts being disposed at right angles to the longitudinal dimensions of the respective rails so that when tightened, the abutments produce a slack take-up and clamping action.

2,437,236
APPARATUS FOR CUTTING THE BEVEL ON HULL PLANKING
Bjarne Aas, Fredrikstad, Norway; vested in the Attorney General of the United States
Application February 24, 1939, Serial No. 258,310
In Norway November 12, 1938
4 Claims. (Cl. 9—6)

1. In the manufacture of vessels such as sailing-boats where a sheathing of wooden planks or boards are mounted edge to edge on ribs forming the skeleton of the boat and where these planks first are shaped to suitable taper according to the varying outside distance from the edge of the boat to its keel at each point along its length, a method for shaping the edge of the planks with such an angle at any point to its plane surface at this point that it when twisted in shape on the said skeleton will abut properly with the meeting edge of the adjacent plank, consisting in the twisting of the plank about its longitudinal axis at each point along its length to the same degree, that each point will be twisted, when twisted and bent in place on the boat, holding the plank in this twisted position on a working bench, and planing the edge of the plank so held by means of a planing tool, the working edge of which being made to pass along the said edge without changing its angular position with reference to said working bench.

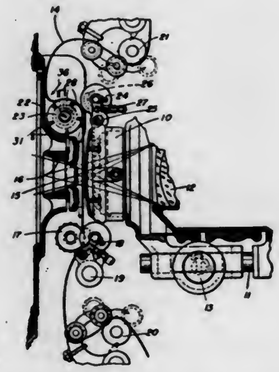
2,437,237
COMBINATION ILLUMINATED TELEPHONE STAND AND MEMO PAD AND PENCIL
Sol J. Beitch and Samuel Fine, Brooklyn, N. Y.
Application November 30, 1945, Serial No. 631,836
1 Claim. (Cl. 240—2.17)

A combined telephone stand, night light, memorandum pad holder and writing instrument receptacle comprising a base for said telephone, a back and sides for said base preventing said telephone from shifting from said base, an upright wall at the front of said base, said upright wall having an opening at the top thereof, strengthening transverse members for said base having openings therein for electric wires, a central compartment, said compartment having a removable base, opposed walls, a top, transverse openings in said top, an electric socket attached to said base, an electric bulb for said socket, an electric switch for turning said bulb on and off, electric lead wires from said switch to said socket, electric wires from said socket to a source of current, a reflector attached to said top above one of said openings for reflecting the rays from said bulb downward, a storage compartment comprising a perforated wall, a base and a hingeable top, said top having a shallow storage compartment for memo sheets, an opening in said top to provide light upon said memo sheets and for withdrawing same, a front grooved member for receiving a writing implement, whereby when said switch is turned on said bulb will act as a night light and cast its rays upward upon the dial of the telephone and downward upon said hingeable top to provide illumination for writing.

2,437,238
LIFTER ROOF
Harry C. Boardman, Chicago, Ill., assignor to Chicago Bridge & Iron Company, a corporation of Illinois
Application October 6, 1945, Serial No. 620,696
5 Claims. (Cl. 48—178)

1. A storage vessel including side walls and a bottom, a lifter roof of greater diameter than the

side walls, a metallic annulus having a minimum diameter slightly greater than the side walls of the vessel and a maximum diameter slightly less than the roof, a flexible fabric sealing ring of low tensile strength connecting the inside of the annulus to the upper portion of the side walls, a flexible fabric sealing ring of low tensile strength connecting the outside of the annulus to the roof



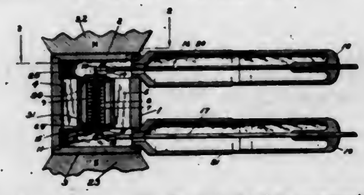
near its bottom and tension members shorter than the width of the fabric ring connecting the side walls with the annulus and similar tension members shorter than the outer fabric ring connecting the annulus and the roof.

2,437,239

FILM REGISTRY MEANS FOR MOTION-PICTURE PROJECTORS

Ewald Boecking, Great Kills, N. Y., assignor to Manufacturers Machine & Tool Co., Inc., Mount Vernon, N. Y., a corporation of New York

Application April 12, 1945, Serial No. 587,943
3 Claims. (Cl. 88—17)



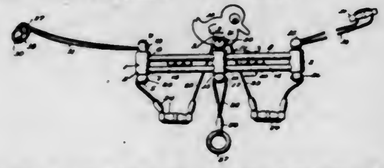
1. An intermittent motion picture projector having a retractable curved film gate with the usual projection aperture, and an intermittent sprocket below the film gate, in combination with a hold-back roller above and mounted separately from the gate a fixed distance above the sprocket, said roller having a casing with one or more slots therethrough over which the film can pass in a straight line to the sprocket without touching the gate when the gate is retracted, a light source inside said casing to project light through said openings, the distance from the casing to the sprocket being such when the gate is retracted that the film is in register with one of the openings when the film is properly meshed with the teeth of the sprocket, the aperture in the curved film gate being so located that it is in register with the film when the gate is closed.

2,437,240

SPACE DISCHARGE DEVICE

William C. Brown, Watertown, Mass., assignor to Raytheon Manufacturing Company, Newton, Mass., a corporation of Delaware

Application June 7, 1943, Serial No. 490,110
3 Claims. (Cl. 250—27.5)



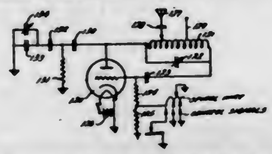
1. An electron discharge device comprising a cathode and an anode having a plurality of electron-receiving face portions adjacent said cathode with a cavity resonator between each pair of electron-receiving portions, and a trough-shaped electrical conductor connected to said cathode, said conductor having an arm of relatively extended surface area supported closely adjacent to and substantially parallel with said electron-receiving face portions.

2,437,241

TOY GYMNASIUM FOR BABY CRIBS

Leslie H. Burlin, Valparaiso, Ind., assignor to Milton L. Sturm, Evanston, Ill., doing business as Milton Sturm & Company, Chicago, Ill.

Application December 10, 1945, Serial No. 633,973
7 Claims. (Cl. 272—61)



4. In a combination toy and exerciser, a rail member, means for detachably securing said rail member to a crib, an animated figure pivotally secured to said rail member, cords secured to said figure on opposite sides of the pivot, handles secured to said cords, said handles being operative to move said figure around its pivot point.

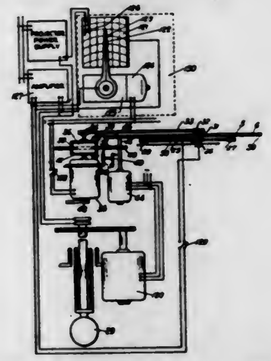
2,437,242

TELEMETERING TRANSMITTER

Robert A. Cole, Moline, Ill., and Donald I. Smith, Vincent, Ohio

Application April 29, 1946, Serial No. 665,710
6 Claims. (Cl. 177—380)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. In a telemetering system, a radio transmitter, a monotone generator, means for modulating the carrier wave transmitted by the transmitter by the tone generator, a rotary switch of the drum type adapted to key the output wave generated by said transmitter said switch comprising a



non-conducting cylinder, a conductive helix disposed on the cylindrical surface thereof, a surrounding non-conducting cylinder for said drum having a plurality of circumferentially incomplete passages longitudinally disposed therethrough, slidable contacts arranged in said passages and in contact with the outer cylindrical surface of said drum, means for individually varying the position of said contacts longitudinally along the surface of the drum in accordance with conditions to be telemetered, a motor arranged to drive said rotary switch, a shaft for said motor, said switch and said generator being mounted thereon to rotate at the same speed.

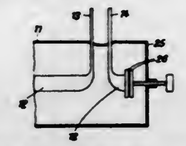
2,437,243

PLOTTING AND COMPUTING DEVICE

Richard P. Curtis, Marblehead, Mass., assignor, by mesne assignments, to Submarine Signal Company, Boston, Mass., a corporation of Delaware

Application January 28, 1942, Serial No. 428,592
13 Claims. (Cl. 234—26)

1. In a system for tracking and computing the course of an object from an observing craft, means for recording the distance and direction of the object from the observing craft on a recording paper comprising a stylus-carrying bar, means rotatably mounting said bar for rotating the same about a point on said paper, a plurality of sprocket wheels and a belt mounted on said arm, one of said sprocket wheels being mounted at the axis of rotation of said bar, stylus means carried by said sprocket belt and means driving said sprocket wheel at the axis of said bar at a rate whereby said stylus means moves over said recording paper amounts corresponding to the distance of the observed object from said axis and means for moving said recording paper at a rate corresponding to the rate of movement of the observing craft.



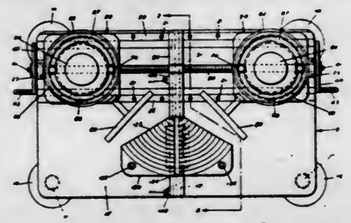
2,437,244

JUNCTION BETWEEN CONCENTRIC AND PARALLEL CONDUCTOR SYSTEMS

Walter Dällenbach, Berlin W. 35, Germany; vested in the Attorney General of the United States

Application June 25, 1941, Serial No. 399,706
In Germany July 11, 1940
1 Claim. (Cl. 178—44)

An arrangement for ultra short waves, for transition of energy of a concentric energy system to a parallel Lecher-system, the combination with said Lecher-system, of concentric inner and outer conductors of the concentric energy system, the inner conductor being interrupted, the free ends of the inner conductor at the interruption point being led through an opening in the outer conductor to the outside of the concentric system,



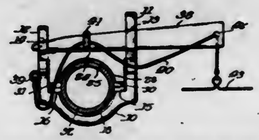
the parallel Lecher-system being connected to the free ends of the inner conductor, and variable capacitance means connected between said inner and outer conductors of said concentric system.

2,437,245

ABRADING MACHINE

William De Young, Hawthorne, and Eric C. Weathered, Jersey City, N. J.

Application June 7, 1945, Serial No. 598,185
6 Claims. (Cl. 51—114)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



3. An abrading machine comprising a support, a first rail mounted on said support, an aperture in said rail, a bushing mounted in said rail, bearings on said support, lead screws mounted in said bearings and carried in said bushing, a slide rail on said support passing through said rail aperture, a plurality of motor stands, means to rotate said lead screws whereby said motor stands are moved on said slide rail, channels in said motor stands, motors carried on motor base-plates mounted on said motor stands, means to secure said motor base-plates in the channels of said motor stands, a housing on said first rail, means to vary the position of said housing, means to limit the movement of said housing, and a work support on said housing.

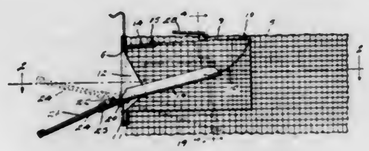
2,437,246

FLEXIBLE PIPE COUPLING

William S. Drinkwater, Chicago, Ill., assignor, by mesne assignments, to Drinkwater, Inc., Waukegan, Ill., a corporation of Illinois

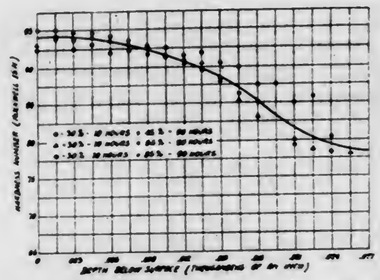
Application February 14, 1945, Serial No. 577,797
7 Claims. (Cl. 285—194)

1. In a pipe coupling the combination of cooperating clamping sections interfitted with each



other, sealing members secured to each of said clamping sections, one of said clamping sections having ears with openings therein, between which ears the other clamping member extends, a key adapted to extend through the openings in the said ears, and a flexible member secured to one of the clamping sections and movably connected with the other clamping section and the key.

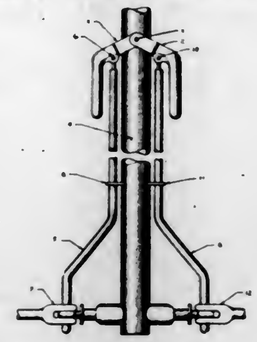
2,437,247
SPECIFIC GRAVITY INDICATOR
Kermit Fischer, Bridge Valley, Pa.
Application May 15, 1944, Serial No. 535,627
7 Claims. (Cl. 73—33)



3. A device for determining the specific gravity of a moving fluid which comprises a downwardly-tapered metering tube adapted for upward flow of fluid therethrough, a metering float having a flow-constricting head-portion disposed within said tube and adapted for up-and-down movement therewithin responsive to variations in fluid rate-of-flow, said float being relatively insensitive to variations in fluid specific gravity and a second metering float disposed within said tube above the head-portion of said first-mentioned float, said second float being sensitive to variations in both rate-of-flow and specific gravity, said tube being provided with a plurality of circumferentially-spaced inwardly-protruding axially-extending beads providing parallel line-contacts for float guidance.

2,437,248
RATTRAP
Arthur C. Fleig, Orange, Tex.
Application September 6, 1945, Serial No. 614,634
4 Claims. (Cl. 43—69)

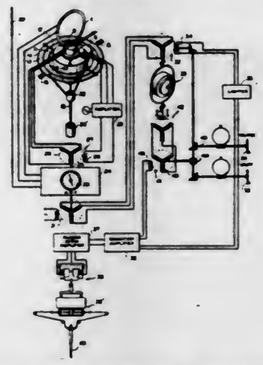
1. An animal trap of the class described comprising an enclosure having an entrance opening, a platform pivoted at the lower edge of the opening and projecting into the enclosure, a counterbalancing ramp pivoted to the outer end of the platform and adapted to normally maintain the platform in a raised position, said ramp being movable into a position for closing said opening, and catch means for securing the ramp in its closed position.



2,437,249
METHOD OF NITRIDING
Carl F. Floe, Belmont, Mass., assignor to The Nitralloy Corporation, a corporation of Delaware
Application April 17, 1946, Serial No. 662,686
11 Claims. (Cl. 148—16.6)

1. The improvement in the nitriding of ferrous metal which comprises treating the metal in a batch or discontinuous operation and while heated to a temperature within the nitride hardening temperature range, with a dry gaseous mixture of ammonia and the dissociation products thereof having an ammonia dissociation value within the range which insures rapid formation on the exposed surfaces of said metal of a nitride layer showing a white appearance when subjected to a nital etch, continuing such treatment with a dry gaseous mixture of ammonia and its dissociation products having an ammonia dissociation value kept solely within the range aforesaid until a thin continuous white layer has been formed, thereupon subjecting the metal to a further nitriding treatment with an ammonia gas mixture containing a relatively high percentage of dissociated ammonia sufficient substantially to arrest any further tendency for formation of said white layer but less than that at which objectionable de-nitriding will take place, and continuing such latter treatment until a case of the desired depth hardness has been produced.

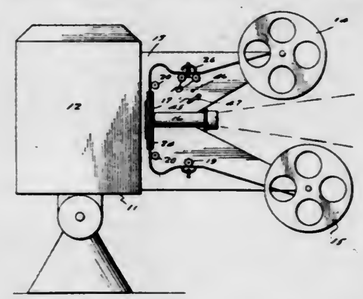
2,437,250
MEANS FOR SELECTIVE DISCONNECTION OF AILERON CONTROLS
Robert Ambrose Flynn, United States Navy
Application June 5, 1944, Serial No. 538,797
4 Claims. (Cl. 244—83)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



1. In an airplane control system, a control stick having one set of conventional control connections, said control connections including aileron control connections having a pair of clevis pin joints therein at opposite sides of said control stick respectively, means on said control stick, having a link connected to the pin of each clevis pin joint, for selectively pulling out the clevis pin from either one of said pair of clevis pin joints in case of jamming of the corresponding

control connection, to release the stick for actuation of the remaining control connections.

2,437,251
STABILIZED RADIO DIRECTION FINDER AND HOMING DEVICE
Carl A. Frische, Great Neck, Thomas M. Ferrill, Jr., Hempstead, and John M. Slater, Garden City, N. Y., assignors to The Sperry Corporation, a corporation of Delaware
Application August 21, 1943, Serial No. 499,468
12 Claims. (Cl. 250—11)

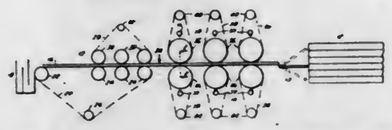


1. In a radio direction finder for a movable craft, a universally mounted rotatable direction responsive antenna, a gimbal mounting therefor, and gyroscopic means for maintaining the axis of rotation of said antenna vertical during rolling and pitching of the craft.

8. A universal mounting for supporting a body with respect to a base, comprising a first gimbal ring mounted in journals fixed to said base for movement about a first journal axis, a yoke pivotally connected to said first gimbal ring through journals along a second journal axis substantially perpendicular to said first journal axis, a second gimbal ring also journaled for freedom relative to said first gimbal ring about said second journal axis, a universally movable body pivotally supported through journals in said second gimbal ring along an axis substantially perpendicular to said second journal axis, and means flexibly coupled to said yoke and also flexibly coupled to said base and said universally movable body for constraining said first gimbal ring to rotate about said first journal axis through a predetermined extent relative to the extent of rotation of said universally mounted body about said journals in said second gimbal ring.

2,437,252
MOVIE PROJECTOR CONTROL DEVICE
George K. Gould, Brooklyn, N. Y.
Application November 30, 1945, Serial No. 631,914
1 Claim. (Cl. 88—17)

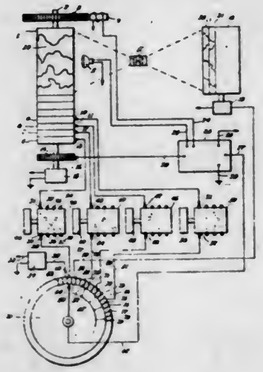
In a motion picture projector, a first reel, a second reel, a film gate, means for supporting



a film in projection position with respect to said film gate as it is being unwound from said first reel onto said second reel, a rewinding motor adapted to rewind said film from the second reel onto the first reel, a projection lamp for the projector, guide means for holding said film against said supporting means during the unwinding of the film, the film being cut away at its side portion adjacent the end of the reel being unwound, a member normally supported on said side portion, a detent lug carried by said member, an element including a cam and a handle device rotatively mounted with respect to said detent lug, a spring biasing said element to a first position, said cam being adapted to lift said member above the level of the film responsive to manual rotation of said element by said handle device against the tension of said spring, a stop lug carried by said element normally cooperating with said detent lug to maintain said element in a rotated position, said stop lug being formed and arranged to clear said detent lug during the coaction of said cam with said member, means responsive to the dropping of said member through the cut-away side portion of the film to disengage said detent lug from said stop lug whereby to release said element, and means responsive to the return of said element to its first position for simultaneously de-energizing said projection lamp, moving said guide means out of holding position with respect to the film and energizing said rewinding motor.

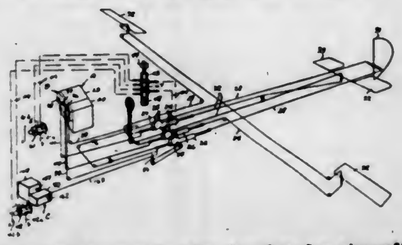
2,437,253
DETERGENT COMPOSITION
Lloyd F. Henderson and Bernard L. Maxwell, Reading, Mass., assignors to Lever Brothers Company, a corporation of Maine
No Drawing. Application January 8, 1940, Serial No. 312,842
4 Claims. (Cl. 252—109)

1. In a process of removing soil from an article by washing with water, the steps comprising add-



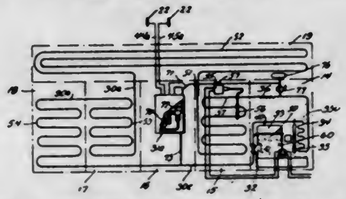
ing to said water a water soluble alkaline earth compound to impart a hardness of approximately the equivalent of 300 parts per million to said water, adding a water-soluble compound that forms a water-insoluble precipitate with the alkaline earth compound, and maintaining said precipitate in an insoluble but dispersed condition by the presence in said solution of a water soluble phosphate having a negative valency of at least 4.

2,437,254
DRUM DRIER FOR SHEET MATERIAL
John Stanley Hill, Laurel, Miss., assignor to Masonite Corporation, Laurel, Miss., a corporation of Delaware
Application July 30, 1943, Serial No. 496,803
4 Claims. (Cl. 34—116)



1. An apparatus for removing liquids from sheets of fibrous material, which comprises opposed rotatable heated pressing rolls between which the sheets are passed, a rotatable idler roll spaced from each pressing roll, an endless belt extending around each pressing roll and around its associated idler roll, said endless belts consisting of foraminous sheets of low heat conductivity and wire screens, the screens being in contact with the heated rolls and the foraminous sheets in contact with the sheet of fibrous material.

2,437,255
GRAPHIC PRIVACY SYSTEM
John V. L. Hogan, Forest Hills, and Hugh C. Reasler, Bayside, N. Y., assignors to Faximile, Inc., New York, N. Y., a corporation of Delaware
Application June 4, 1943, Serial No. 489,654
7 Claims. (Cl. 35—4)



1. In an enciphering device for graphic material privacy, the combination of, means for reproducing the original graphic material in strips mixed in a predetermined manner, and means for determining the order of mixing to form an enciphered copy.

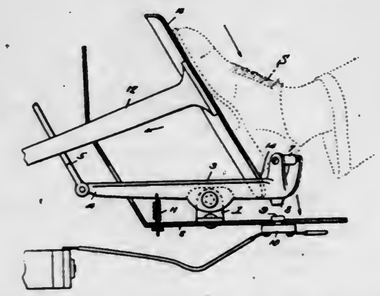
2,437,256
AUXILIARY CONTROL MECHANISM FOR AUTOMATIC PILOT
Pliny G. Holt, United States Navy
Application November 20, 1942, Serial No. 466,301
7 Claims. (Cl. 244—76)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. In an automatic pilot bomber for aircraft, a rudder operating means, an aileron operating means, a gyroscopic means for controlling said rudder operating means, a gyroscopic means for controlling said aileron operating means, a follow-up connection between said rudder operating means and said rudder controlling gyroscopic means, means responsive to operation of said rudder operating means for influencing said aileron controlling means whereby the amount of bank is correlated with the rudder displacement of the aircraft, an auxiliary mechanism for controlling said rudder operating means, a follow-up connection between said rudder operating means and said auxiliary mechanism, a bombsight, means connecting said auxiliary mechanism to said bombsight, said auxiliary mechanism, rudder operating means and gyroscopic rudder control means responsive to changes in the direction setting of said bombsight.

2,437,257
REFRIGERATOR AND MEANS FOR MAINTAINING THE COMPARTMENTS THEREOF AT DIFFERENT TEMPERATURES
Herman K. Johnson, Grand Haven, Mich., assignor to The Bastian-Blessing Company, Chicago, Ill., a corporation of Illinois
Application April 2, 1945, Serial No. 586,240
7 Claims. (Cl. 62—7)

1. In a refrigerating apparatus, a plurality of cooling compartments, an expansion coil in each compartment, compressor and condenser mechanism for supplying a refrigerant to said coils, valveless passages connecting said coils in series with said mechanism, said passages having at least two sections in which the internal diameters thereof are restricted to function as expansion valves, each restrictor being anterior to at least two expansion coils in the direction of flow of the refrigerant, the lengths and internal diameters of the coils being such that one of the compartments after the first restrictor will be maintained at a higher temperature than the first compartment and the other compartment, thermo-sensitive means in the second compartment after one of the restrictors for controlling the amount of refrigerant flowing through said coils in a given time, a thermostatically controlled water cooler connected in parallel with said passages across the compressor and condenser mechanism including a check valve proximate to the inlet of the expansion coil of the water cooler, and a reservoir for refrigerant connected to the water cooler refrigerant line between said check valve and expansion coil of the water cooler.

2,437,258
ISOPRENE ESTERS
Franklin D. Jones, Llanerch, Pa., assignor to American Chemical Paint Company, Ambler, Pa., a corporation of Delaware
No Drawing. Application March 5, 1943, Serial No. 478,123
4 Claims. (Cl. 260—469)

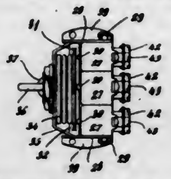


1. The isoprene ester of an acid selected from the group of plant hormone acids consisting of naphthyl acetic acid, indole acetic acid, naphthoxy acetic acid, dichlorphenoxy acetic acid, 2-methyl naphthyl 1-acetic acid, 4-methyl naphthyl 1-acetic acid, 1,2,3,4-tetrahydronaphthyl 6-acetic acid acid (also known as 5,6,7,8-tetrahydronaphthyl 2-acetic acid), naphthoxy propionic acid, dichlorphenoxy propionic acid, naphthyl butyric acid, indole butyric acid, naphthoxy butyric acid and dichlorphenoxy butyric acid.

2,437,259
METHOD OF FORMING PLATES FOR RUNWAYS IN SPIRAL CHUTES AND THE LIKE
Frederick Kauts, Philadelphia, Pa.
Application March 20, 1943, Serial No. 479,945
19 Claims. (Cl. 29—148)

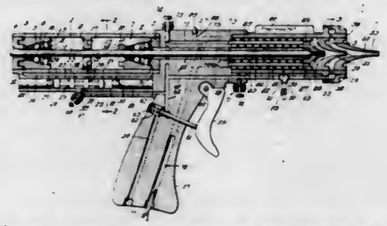
1. The process of forming a sectional unit in the runway of a chute conveyor of the tortuous kind or the like, consisting in preparing plates of tapered shape, arranging said plates in units and forming said units so as to acquire the contour of said runway with the aid of an apparatus having a base in which two opposite planes corresponding to the outer and inner grades of the assembled chute conveyor respectively and said apparatus further having retaining means at spaced portions and a pressure device operable upon said base, and said respective steps of arranging and forming said units, comprising placing said tapered plates upon said base in reciprocal relation to each other with respective edge portions thereof in mutual adjacency, and attaching respective peripheral ends of said plates lying at the outer and inner curve in the assembled chute conveyor to said spaced portions with said retaining means thereby disposing said plates in the plane of said outer and inner grade respectively, depressing the material of said plates lying inwardly from said spaced portions by operating said pressure device thereupon so as to cause a movement of said edge portions in the direction of the pressure combined simultaneously with a reciprocal and gradual turn of the planes of the plates between said peripheral ends and effect a gradual equilibrium in the material between said respective grades, and completing said unit by securing adjacent edge portions of said plates to each other.

2,437,260
AUTOMOBILE CONTROL MECHANISM
Sergius T. Kobernick, Upper Darby, Pa.
Application November 8, 1945, Serial No. 627,392
5 Claims. (Cl. 192—3)



1. The combination of a starter switch, of a spring restrained lever positioned to actuate the switch when said lever is moved at one end from normal position, means for connecting one end of the lever to a carburetor, a brake lever having a foot plate overlying the spring restrained lever, and a foot rest and support carried by the spring restrained lever.

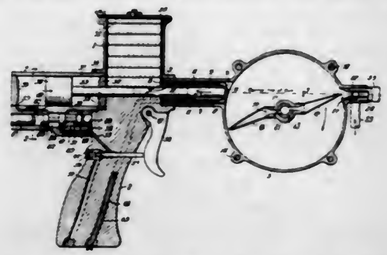
2,437,261
CONDENSATION PRODUCTS OF CHOLESTERYL ESTERS WITH POLYETHYLENE GLYCOL AND PROCESS FOR PRODUCING SAME
Louis L. Lerner, Chicago, Ill., assignor to Consolidated Royal Chemical Corporation, Chicago, Ill., a corporation of Delaware
No Drawing. Application October 9, 1944, Serial No. 557,945
21 Claims. (Cl. 260—397.2)



1. The process which comprises chemically condensing the essential ingredients of an anhydrous mixture comprising essentially polyethylene glycol and cholesteryl ester of saturated straight-chain monocarboxylic aliphatic acid having from 12 to 18 inclusive carbon atoms, while effecting elimination of water of condensation generated by chemical action, by heating said mixture containing said ester and said polyethylene glycol to a temperature and for a time substantially to effect the said generation of water, and by removing from the mass the resulting water in the form of vapor.

2,437,262
ELECTRIC HEATER THERMOSTATIC SWITCH CONTROL
Percy B. Levitt, Millburn, and John D. Morgan, South Orange, N. J., assignors to Cities Service Oil Company, New York, N. Y., a corporation of Pennsylvania
Application January 17, 1946, Serial No. 641,675
7 Claims. (Cl. 219—38)

1. Electric heating apparatus comprising a plurality of resistance heating elements arranged in parallel circuit relation, a switch in circuit with each of said elements, each such switch having an actuating button which is adapted by travel of a few thousandths of an inch to open and close its associated circuit, a bridge element overlying all of said buttons and a thermostatic member responding to the delivery of heat by said elements, said member being operatively connected to said bridge to cause it to engage all of said buttons simultaneously and by continued movement in a given direction to actuate said switches in sequence.

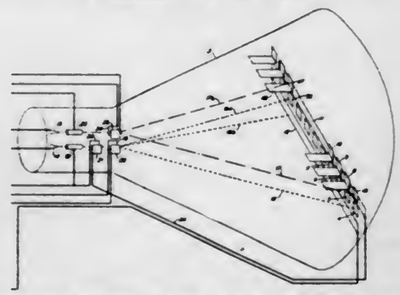


2,437,263
METHOD AND APPARATUS FOR THE PRODUCTION OF FILAMENTS FROM SOLIDS
Fred W. Manning, Palo Alto, Calif.
Application September 29, 1943, Serial No. 504,525
11 Claims. (Cl. 18—8)

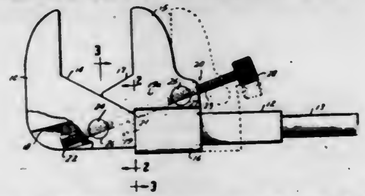
1. The method of producing filaments of substantial strength from a thermoplastic material comprising: feeding the said material in a solid rod of uniform cross-section into a reducing zone; subjecting the said material to heat and pressure in the said zone to reduce the material to a fluid condition; alternating the said fluid material into a plurality of filaments by pressure of the oncoming solid rod; and stretching and conveying the said filaments by a blast of elastic fluid.

2,437,264
MAGAZINE SPINNING GUN FOR THE PRODUCTION OF FILAMENTS AND FABRICS
Fred W. Manning, Palo Alto, Calif.
Application September 18, 1944, Serial No. 554,711
27 Claims. (Cl. 154—101)

1. The method of making a non-woven fabric from a fluid plastic comprising: disrupting the said plastic into finely divided portions; positively pulling the said portions a predetermined amount to produce a plurality of stretch-oriented filaments of substantial length; propelling the said filaments by force of a fluid stream to deposit the filaments; and maintaining the said filaments during the said fluid propulsion in a sufficiently adhesive condition to adhere to one another upon deposition.

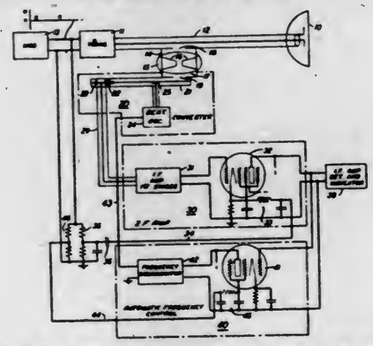


2,437,265
TAMPON, SANITARY NAPKIN, SURGICAL DRESSING, INSULATING MATERIAL, FILTER CARTRIDGE, UPHOLSTERY, AND THE LIKE
Fred W. Manning, Palo Alto, Calif.
Application December 10, 1943, Serial No. 513,787
4 Claims. (Cl. 154—54)



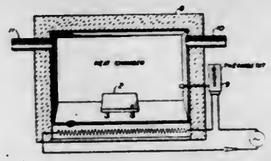
3. An article comprising a web of non-binder fibres enclosed within a continuous web of promiscuously intersecting, stretch-oriented, binder fibres, the two said webs being bonded together by the adhesive character of the binder fibres.

2,437,266
TRANSLATING DEVICE
Warren A. Marrison, Maplewood, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application September 20, 1945, Serial No. 617,632
7 Claims. (Cl. 177—353)



1. The combination in a translating device of a plurality of primary electrodes, means for producing a beam of energy for incidence upon said electrodes, a plurality of secondary electrodes, means for producing a second beam of energy for incidence upon said secondary electrodes, separate and mutually independent means for deflecting said first and second beams over said primary and secondary electrodes respectively, and means effective when a predetermined relation is established between the positions of said beams on said electrodes for causing a coactive displacement of one beam with respect to the other, and signaling means electrically connected to said device and rendered operative by said displaced beam.

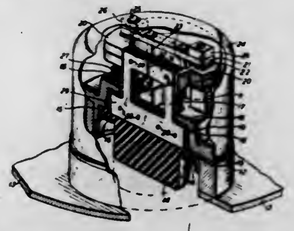
2,437,267
SLIDING JAW WRENCH WITH OPPOSITELY THREADED SCREW ADJUSTMENT
Thomas L. Mayrath, Dodge City, Kans.
Application May 15, 1946, Serial No. 669,773
3 Claims. (Cl. 81—163)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



1. An adjustable wrench comprising a fixed jaw, a shank integral therewith, a movable jaw, a collar associated therewith, said collar slidably fitting said shank, said shank being perforated by an inclined slot and the movable jaw being also perforated by a slot of similar incline so as to be registrable with the first, a trunnion nut mounted across each of said slots, and an adjusting screw threadedly mounted through both trunnion nuts, said screw having two oppositely threaded sections whereby said screw upon rotation partially rotates said trunnion nuts and moves the collar and associated jaw along the length of said shank.

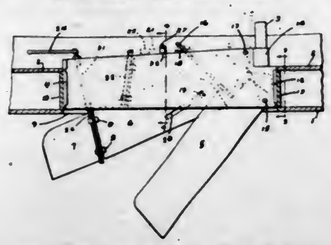
2,437,268
INTERMITTENTLY OPERATING AUTOMATIC FREQUENCY CONTROL
Stewart E. Miller, Jackson Heights, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application October 11, 1944, Serial No. 558,249
9 Claims. (Cl. 250—13)

1. In a pulse transmitting and receiving system employing a duplexing unit operated by the transmitted pulses to reduce the input to the receiver during transmission, means for producing a control pulse at the beginning of the transmitted pulse and of shorter duration, means responsive to said control pulses for blocking the receiver, a normally inoperative automatic frequency control responsive to the receiver output, and means for rendering said automatic frequency control operative during each transmitted pulse.



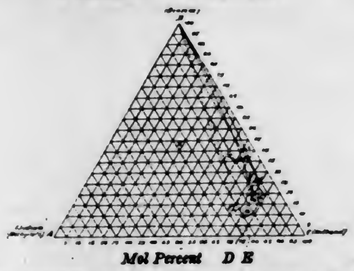
2,437,269
TRANSLATING DEVICE AND METHOD OF MAKING IT
Russell S. Ohl, Red Bank, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application April 10, 1944, Serial No. 530,419
12 Claims. (Cl. 175—366)

1. The method of making a translating device for electric waves of high frequency which comprises forming a crystalline body of silicon having definite electrical characteristics and heat-treating said body to form on the surface thereof a layer having electrical characteristics which differ from those of the remaining part of said body.



11. A translator for ultra-high frequency electric waves including a body of silicon containing impurities and having a thin integral layer of high electrical impedance at the surface thereof, and a fine conducting element making a point contact with said surface layer.

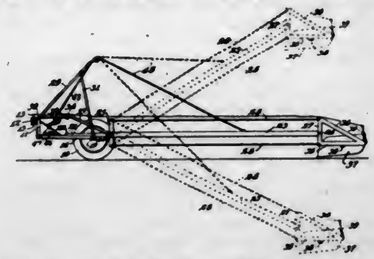
2,437,270
MAGNETOSTRICTIVE COMPRESSIONAL WAVE TRANSMITTER OR RECEIVER
Robert L. Peek, Jr., Short Hills, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application November 5, 1943, Serial No. 509,085
8 Claims. (Cl. 177—386)



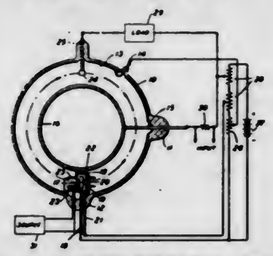
1. A magnetostrictive device comprising a core defining a magnetic loop and having therein a portion of greater reluctance than the remainder of the loop and a magnetostrictive portion separate from said first portion, a signal coil electromagnetically coupled to said loop, means mounting said core for substantially free vibration, and a permanent magnet having its poles opposite the ends of said first portion.

2,437,271
CENTERBOARD INSTALLATION
Henry Weston Rice, East Boothbay, Maine
Application January 11, 1946, Serial No. 640,585
4 Claims. (Cl. 114—128)

1. In combination, a centerboard box, means for removably securing same in the hull of a boat, a centerboard pivotally secured at its forward end in said box, a rudder skeg contained in said box in parallel relation to said centerboard, a rudder hinged to the after end of said skeg and provided with a sectional rudder stock, and means for pivotally mounting the fore end of the skeg in the box and arranged to allow a fore and aft sliding movement to said skeg.



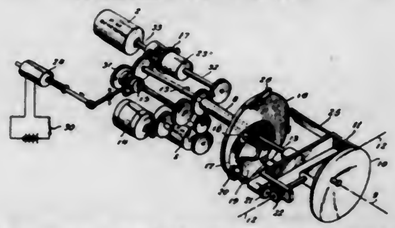
2,437,272
PROCESS FOR THE PRODUCTION OF ALKALI METAL METHYLATES
Richard Sewall Robinson, Gloucester, Mass., assignor to Allied Chemical & Dye Corporation, a corporation of New York
Application March 9, 1944, Serial No. 525,687
8 Claims. (Cl. 260—632)



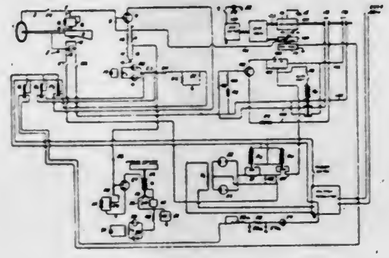
3. A process for the manufacture of alkali metal methylates which comprises reacting an alkali metal amalgam with methanol in the presence of an aryl azo compound, the amount of methanol being in excess of that theoretically required for the reaction, and the proportions of reactants and solvents being such that a homogeneous reaction mixture is produced containing at least 5 mol percent sodium methylate, adding an amount of an aromatic hydrocarbon solvent to the reaction mixture sufficient to cause the formation of two layers, one comprising a solution of the methylate in the excess methanol and the other a solution of the aryl hydrazo compound corresponding to the aryl azo compound used in the hydrocarbon solvent, and separating said layers.

2,437,273
DRAINAGE DITCH EQUIPMENT
Nicholas J. Schuster, Easton, Minn.
Application February 28, 1945, Serial No. 580,115
3 Claims. (Cl. 212—59)

1. In a device of the class described, a relatively stationary frame having means for attaching the same to a tractor or the like, an elongated boom connected to said frame for vertical and horizontal movement relative thereto, boom elevating means connected to said frame for movement vertically relative thereto, an under carriage connected to said frame for movement vertically relative thereto, and a supporting connection between said under carriage and said boom elevating means.



2,437,274
ELECTRON DISCHARGE APPARATUS
Albert M. Skellett, Madison, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application July 6, 1944, Serial No. 543,639
9 Claims. (Cl. 315—5)

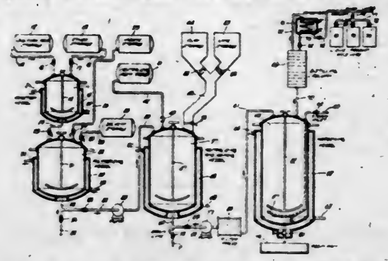


1. Electron discharge apparatus comprising a source of electrons, an electron receiving electrode, and a pair of concentric spherical electrodes, said source and said electron receiving electrode being mounted at substantially diametrically opposite regions between said spherical electrodes.

2,437,275
SCANNING REFERENCE GENERATOR
Matthew Skene, Hempstead, and Charles H. Gulles, Garden City, N. Y., assignors to The Sperry Corporation, a corporation of Delaware
Application July 27, 1946, Serial No. 686,710
22 Claims. (Cl. 177—351)

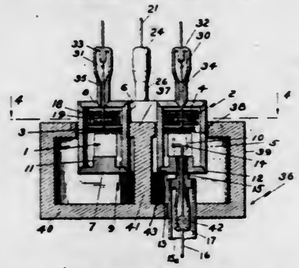
1. Apparatus for indicating the instantaneous angular position of a member, which member is adapted to rotate about a first axis and oscillate about a second axis perpendicular to and rotating with said first axis, comprising an indicator having an indicating beam, means for generating signals including frequencies greater and less than the frequency of said rotation by the frequency of said oscillation, and means for deflecting said beam in response to said signals.

2,437,276
HANGFIRE RECORDER
Herschel Smith and James V. Dunham, Southampton, Pa., and Norman K. Turnbull, Pitman, N. J.
Application August 26, 1941, Serial No. 408,334
22 Claims. (Cl. 234—36.5)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



1. In a system for measuring the characteristics of ammunition propelled from a firearm, electric means for actuating the firing means of the firearm, a recorder having a rotatable drum, a plurality of electric switches, means for actuating said switches in timed relation to the rotation of the recorder, electric means responsive to the presence of the propellent gases from the ammunition for producing indicia on the recorder, and electric means responsive to the actuation of the switches for energizing and deenergizing said first mentioned electric means.

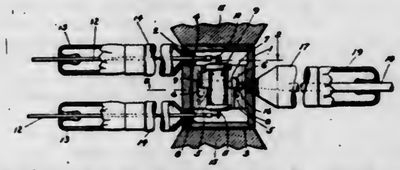
2,437,277
PROCESS FOR THE PRODUCTION OF ERYTHRITOL
Frank J. Soday, Baton Rouge, La., assignor to The United Gas Improvement Company, a corporation of Pennsylvania
No Drawing. Application February 2, 1944, Serial No. 520,826
1 Claim. (Cl. 260—636)



A process for the preparation of erythritol which comprises hydrolyzing a dichloro diacetate of butadiene in the presence of a 5 to 25% aqueous solution of a weak alkali at a temperature in the range of from 110° to 140° C.

2,437,278
POLYMERIZATION OF SUBSTITUTED INDENE
Frank J. Soday, Baton Rouge, La., assignor to The United Gas Improvement Company, a corporation of Pennsylvania
Application February 12, 1944, Serial No. 522,094
6 Claims. (Cl. 260—80)

1. A method of producing resinous polymer from methyl indene which comprises contacting said methyl indene with a catalyst selected from the group consisting of alkyl and aryl acid sulfates at a temperature in the range of 0° to 70° C. in the substantial absence of coumarone.

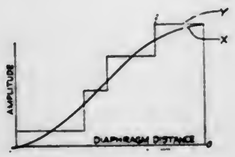


2,437,279
HIGH-POWER MICROWAVE DISCHARGE TUBE
Percy L. Spencer, West Newton, Mass., assignor to Raytheon Manufacturing Company, Newton, Mass., a corporation
Application September 23, 1942, Serial No. 459,347
11 Claims. (Cl. 315—39)

1. An electrical space discharge device comprising a cathode, an anode, said anode having a plurality of sections having electron receiving surfaces disposed substantially in a plane, said surfaces being spaced from each other, said cathode having an electron emitting surface disposed substantially in a plane substantially parallel to the plane of said electron receiving surfaces, and means adjacent the discharge path between said planes for producing a magnetic field transverse to said discharge path.

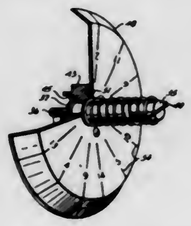
2,437,280
ELECTRON DISCHARGE DEVICE OF THE MAGNETRON TYPE
Percy L. Spencer, West Newton, Mass., assignor to Raytheon Manufacturing Company, Newton, Mass., a corporation of Delaware
Application November 2, 1943, Serial No. 508,709
8 Claims. (Cl. 315—39)

1. An electron discharge device comprising a cathode, an anode structure, said anode structure



comprising a plurality of anode arm members each having a pair of electron-receiving faces adjacent said cathode, each pair of said faces being interconnected through a path of conducting material in its arm member, said path surrounding an opening in said arm member, said arm members being disposed with said openings substantially in register and defining a resultant path in which a resultant magnetic field is adapted to be set up, and a coupling loop interposed in said resultant path.

2,437,281
HIGH-FREQUENCY RADIANT ENERGY APPARATUS
Gerald Leon Tawney, Hempstead, N. Y., assignor to The Sperry Corporation, a corporation of Delaware
Application July 19, 1944, Serial No. 545,580
22 Claims. (Cl. 250—11)

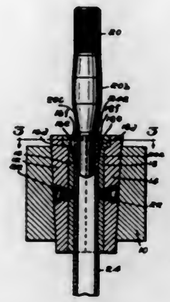


1. The method of scanning a directional radiant energy beam comprising the steps of producing a sequence of time-displaced, pulsed high frequency electromagnetic waves, and radiating said waves with respectively different directivity characteristics, said characteristics having diverging axes of maximum directivity and having partially overlapping directivity patterns.

2,437,282
ELECTROACOUSTICAL TRANSDUCER
Edwin E. Turner, Jr., West Roxbury, Mass., assignor, by mesne assignments, to Submarine Signal Company, Boston, Mass., a corporation of Delaware
Application November 18, 1942, Serial No. 466,073
8 Claims. (Cl. 177—386)

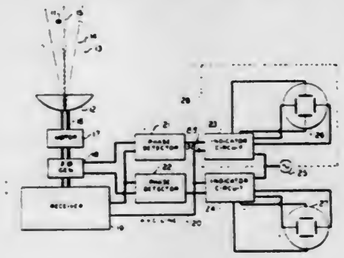
1. An oscillator for transmitting or receiving directively high frequency compressional waves comprising a radiating plate having linear dimensions large as compared to the wave length of a compressional wave to be transmitted or received in the propagating medium, means clamping said radiating plate in its periphery and means for vibrating said plate, said means acting over the surface of the same for producing amplitudes at points of the surface of said plate corresponding approximately to the law of lowest natural mode of vibration of the same whereby a directive beam pattern is obtained with an emphasized main lobe and suppressed auxiliary lobes.

2,437,283
CYLINDER FIRING POSITION LOCATOR USED IN ADJUSTING VALVE CLEARANCES
Giles W. Viers, Denton, Tex.
Application March 22, 1945, Serial No. 584,222
3 Claims. (Cl. 116—124)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



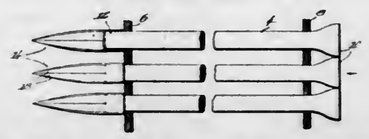
1. An indicating device arranged for mounting on a magneto including a breaker cam shaft which has a threaded portion at the outer end and carries a cam thereon operably connected with a multi-cylinder radial engine to actuate the cam with the engine, said device comprising a dial-like indicator having markings thereon bearing a definite relation to the numbers of the firing order of the cylinders, a centering shaft having an end removably threaded onto said portion of said cam shaft to mount said indicator thereon, projecting means on said centering shaft coacting with corresponding means on the cam to oblige the indicator to rotate with the cam, marking means on the rim of the magneto housing whereby the marking on the indicator may be set for readily locating the firing position of a cylinder, and means on the centering shaft including a spring and swingable means to retain the spring for holding the indicator in its operative position on the magneto and being arranged to facilitate removal of the device from the cam shaft.

2,437,284
ARTIFICIAL RUBBER FROM VINYL RESIN, PHENOL-ALDEHYDE RESIN, AND PLASTICIZER
Benjamin W. Watson, Trenton, N. J.
No Drawing. Application November 22, 1943, Serial No. 511,345
8 Claims. (Cl. 260—34)



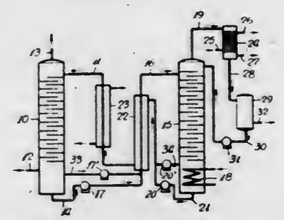
1. The process of preparing a resilient rubber-substitute composition which comprises heating to a reaction temperature of about 135° C. until a gelatinous consistency is obtained a thermosetting partially cured phenol-aldehyde resin and a liquid plasticizer which has a strong solvent action on said resin, and mixing the resulting highly plasticized phenol-aldehyde resin with a polyvinyl resin having an average melting point in excess of 125° C., said polyvinyl resin being selected from the group consisting of polyvinyl chloride and copolymers of vinyl chloride and vinyl acetate, the phenol-aldehyde content of the mixture being between ½% and 15% by weight of the mixture, exclusive of fillers.

2,437,285
MEANS FOR FLARING TUBING
James R. Welshman, Cranston, R. I., assignor to Grinnell Corporation, Providence, R. I., a corporation of Delaware
Application November 11, 1943, Serial No. 509,931
4 Claims. (Cl. 153—79)



1. Means for flaring tubing comprising a die having a cylindrical wall fitting the normal external wall of the tubing, a conically flared wall for determining the degree of flare of the tubing, and a short cylindrical wall adjacent the large end of said flared wall providing an opening slightly larger than the external dimensions of the tubing; and a plunger for insertion in the tubing having a conically flared surface whose larger end is slightly smaller than the said opening whereby upon the plunger being inserted into the tubing until the said larger end of the flared surface of the plunger is opposite the said short cylindrical wall of the die, the tubing is flared against the flared surface of the die and its wall opposite the said short cylindrical wall of the die is appreciably thinned.

2,437,286
RADAR DEVICE
Marcus K. Witt, Hempstead, N. Y., assignor to The Sperry Corporation, a corporation of Delaware
Application August 17, 1943, Serial No. 498,929
11 Claims. (Cl. 250—160)

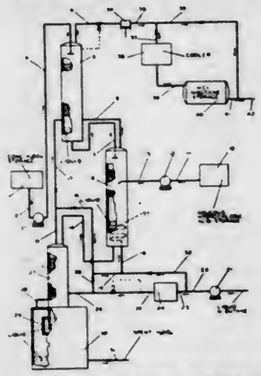


1. In a tracking indicator, means responsive to a signal for producing an angularly movable error indicating line, and means for controlling the visible length of said line to indicate signal strength.

2,437,287
HEAT EXCHANGE APPARATUS
John E. Woods, Brookline, Mass., assignor, by mesne assignments, to Standard-Thomson Corporation, Boston, Mass., a corporation of Delaware
Application December 15, 1943, Serial No. 514,383
2 Claims. (Cl. 257—2)

1. In an aircraft oil cooler having tubes for the flow of cooling fluid therethrough, control devices applied to individual tubes at the rear thereof and having bendable thermostatic leaves operating to close the channels at low temperatures and to open for substantially unrestricted flow at normal and higher temperatures, adjacent control devices opening outwardly to engage one another to limit the extent of movement at excessive temperatures.

2,437,288
SEPARATION OF GASEOUS MIXTURES
Ray B. Anderson, Charleston, W. Va.
Application December 28, 1943, Serial No. 515,939
9 Claims. (Cl. 23—2)

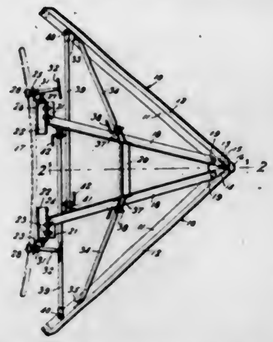


1. The process of removing hydrocarbons and acidic gas from a mixture of gases containing the same, which includes contacting said gas mixture in an absorption operation with a substantially non-emulsified mixture of two emulsifiable absorbent liquids which are substantially immiscible with each other, one of which liquids comprises an absorption oil which absorbs said hydrocarbons and the other of which liquids comprises an amine which absorbs said acidic gas, separating said liquids from the unabsorbed portion of said gas mixture, conducting the liquids from said absorption operation to a desorption operation, regenerating the liquids in said desorption operation, and then returning the regenerated liquids to said absorption operation for further contact of the substantially non-emulsified mixture thereof with additional quantities of said gas mixture to be treated, said liquids in their cyclic flow from said absorption operation to said desorption operation and back to the absorption operation being passed through at least one pressure-changing condition wherein the liquids are subjected to a relatively high degree of confined turbulence such as would tend to produce emulsification of the liquids if they were permitted to pass through such pressure-changing condition while in contact with each other, and said process also including effecting gravity separation of said liquids from each other prior to their passage through at least the first such pressure-changing condition encountered by said

liquids after they leave said absorption operation, and causing said liquids to pass separately and out of contact with each other through each such pressure-changing condition, thereby to prevent emulsification of said liquids with each other.

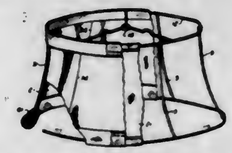
2,437,289
CYANOCYCLOBUTANE DERIVATIVES
Paul L. Barrick, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application January 28, 1944, Serial No. 520,104
9 Claims. (Cl. 260—464)

5. A compound containing a four-carbon atom ring to which is attached directly a cyano group, a plurality of fluorine atoms, and a tervalent nitrogen atom having at least one and not more than two valences attached directly to a carbon atom of said ring.



2,437,290
METHOD FOR MANUFACTURING ANHYDROUS HCl
Kenneth C. Bottenberg and James A. Richardson, Bartlesville, Okla., assignors to Phillips Petroleum Company, a corporation of Delaware
Application August 9, 1943, Serial No. 498,006
14 Claims. (Cl. 23—154)

1. A process of recovering substantially anhydrous hydrogen chloride from an aqueous solution thereof which comprises intimately contacting said aqueous solution with concentrated sulfuric acid in a contacting zone, injecting directly into the mixture a liquefied stream of a normally gaseous inert material and thereby effecting simultaneous cooling of the mixture and liberation of a stripping gas, passing said liberated gas through said mixture in said contacting zone to effect stripping thereof, removing the resulting almost anhydrous gaseous mixture of the stripping gas and hydrogen chloride from the contacting zone, and removing the spent sulfuric acid from the contacting zone.

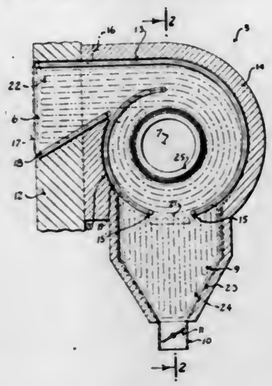


2,437,291
SNOWPLOW
Roland B. Bourne, West Hartford, Conn., assignor to The Maxim Silencer Company, Hartford, Conn., a corporation of Connecticut
Application May 20, 1946, Serial No. 670,875
7 Claims. (Cl. 37—44)

1. A plow for attachment to the bumper of an automobile which comprises a pair of moldboards hinged together at their forward ends for swinging movement about a vertical axis, a triangular frame for transmitting thrust from the car bumper to the plow, said frame including a pair of side members pivotally connected one to each moldboard adjacent said hinge and at the lower

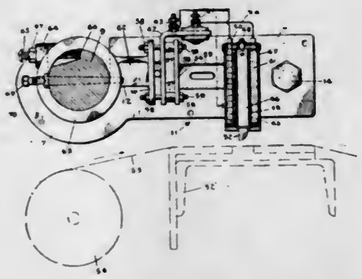
edge portion of the moldboard for swinging movement in a vertical plane, and links connecting the moldboards to the side members, said links being positioned to transmit thrust from the side members downwardly to the moldboards when the rear ends of the members are raised to bumper height.

2,437,292
LAMP SHADE
Morton S. Brockman, Cleveland, Ohio
Application July 11, 1945, Serial No. 604,421
2 Claims. (Cl. 240—108)



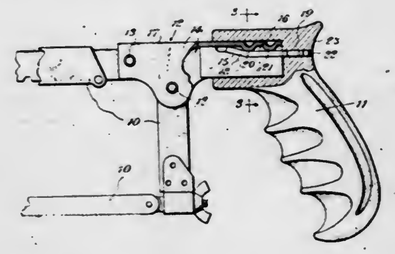
1. A lamp shade, comprising, a frame member, a first sheet member having a marginal portion, a first moisture-impervious tape member bonded to the marginal portion folded in one direction around and secured to a portion of the frame, a second sheet member having a marginal portion and a second moisture-impervious tape member bonded to the second marginal portion folded in the opposite direction around and secured to a portion of the frame and the first sheet member.

2,437,293
EMULSIONS CONTAINING A DRYING OIL-ESTER RESIN COPOLYMER
William H. Butler, Bloomfield, N. J., assignor to Bakelite Corporation, a corporation of New Jersey
No Drawing. Application May 29, 1943, Serial No. 489,063
7 Claims. (Cl. 260—6)



1. Aqueous emulsion comprising as an essential ingredient a copolymerization product of a drying oil with an ester obtained in reacting a cyclopentadiene-maleic adduct, a fatty acid having from 5 to 22 carbon atoms in the chain and a polyhydric alcohol.

2,437,294
DUST SEPARATOR
David Dalin, Sodertalje, Sweden
Application September 30, 1943, Serial No. 504,339
In Sweden September 8, 1942
Sections 1 and 3, Public Law 690, August 8, 1946
Patent expires September 8, 1962
9 Claims. (Cl. 183—32)



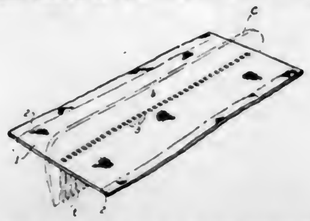
1. A centrifugal type dust separator for separating solid particles from extremely hot gases comprising: a chamber having an inlet for the hot burdened gases, an outlet for the unburdened gases, and a collecting compartment for the solid particles separated from the gases, said chamber being shaped so as to impart abrupt changes in the direction of flow of the gases therethrough so that the solid particles entrained by the gases are separated therefrom by the inertia of the moving particles; and a substantially imperforate protective covering for the inner walls of the separator for substantially precluding contact of the hot gases with the separator walls during passage of the gases through the separator, said protective covering comprising a series of closely adjacent fluid passages through which a coolant is circulated.

2,437,295
CUTTING DEVICE
Donald R. Eastwood, Drummondville, Quebec, Canada, assignor to Celanese Corporation of America, a corporation of Delaware
Application June 28, 1944, Serial No. 542,579
16 Claims. (Cl. 164—38)

1. In a device for severing a sheet or web containing thermoplastic material, a cutting element, means for heating said cutting element by means of electrical energy, said heating means including a heating coil adjacent to said cutting element, and a plurality of bus bars having electrical connections to said cutting element, and means for effecting an angular adjustment of said cutting element with respect to the sheet or web being severed.

2,437,296
TOOL
Harold S. Forsberg, Shelton, Conn.
Application August 13, 1946, Serial No. 690,269
4 Claims. (Cl. 306—1)

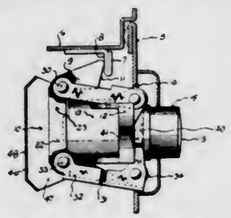
1. The combination of a tool, a handle therefor, a locking member for rigidly attaching the tool to the handle, one end of the locking member being secured to the tool and its other end entering the handle in one direction and having a cam and a lug, and a pin entering the handle in the opposite direction and the head of which engages the handle and the forward end of which is bent and lies between the cam and the lug.



2,437,297
TREATMENT OF DRILLING FLUIDS
Allen D. Garrison, Houston, Tex., assignor to Texaco Development Corporation, New York, N. Y., a corporation of Delaware
No Drawing. Application October 25, 1944, Serial No. 560,343
25 Claims. (Cl. 252—8.5)

1. The process of controlling the viscosity of an aqueous drilling fluid employed in drilling a well which comprises treating the fluid with an amount sufficient to control the viscosity of a combination containing a substantial proportion of a water-insoluble monometaphosphate having a cation selected from the group consisting of the alkali metals and ammonium together with a sufficient amount to activate said monometaphosphate of an at least colloidally soluble salt having a dissimilar cation selected from the group consisting of the alkali metals and ammonium and an anion consisting of a radical of an aliphatic carboxylic acid containing in addition to the characteristic carboxylic acid group at least one member selected from the group consisting of hydroxyl groups and carboxylic acid groups.

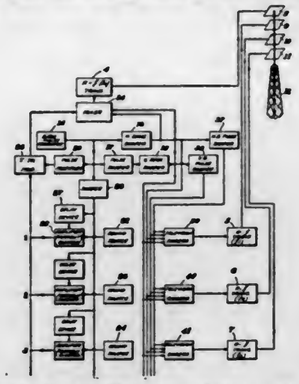
2,437,298
COMB ACCESSORY
Fannie R. Heyman, New York, N. Y.
Application July 30, 1946, Serial No. 687,092
1 Claim. (Cl. 132—27)



An assembly of the character described comprising: a comb, and a strip of rough surfaced

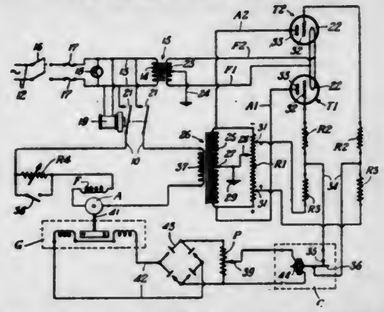
pile fabric wherein the pile is woven into the fabric, said fabric strip being impaled intermedi-

ate its edges upon the teeth of the comb with the lateral portions of the strip folded back over the back edge of the comb.



2,437,299
LOCK DEVICE
Edward N. Jacobi, Milwaukee, Wis., assignor to Briggs & Stratton Corporation, Milwaukee, Wis., a corporation of Delaware
Application May 26, 1945, Serial No. 595,999
12 Claims. (Cl. 70—81)

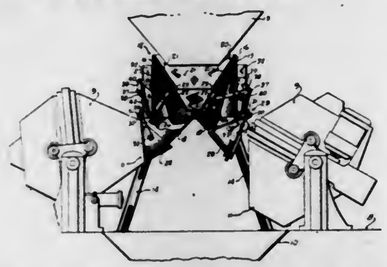
1. In a lock device of the character described: a casing having a bore opening to its front end; a lock cylinder slidable axially in said bore with the front of the lock cylinder projecting out of the bore at the front of the casing to provide a push button actuator for the cylinder; a lock bolt having a keeper engaging bit; parallelogram linkage movably connecting the lock bolt with the casing and guiding the bolt for substantially translating motion in a path transversely of the cylinder axis, said bolt being movable in said path from an operative position with its bit projected to a keeper engaging position to an inoperative position with its bit retracted from said keeper engaging position; spring means yieldingly biasing the lock bolt to its operative projected position; and a motion transmitting connection between the lock bolt and the cylinder by which depression of the push button actuator to slide the cylinder axially into the casing bore is translated into retractive motion of the lock bolt to its inoperative position.



2,437,300
TELEVISION AND SOUND TRANSMITTING SYSTEM
Emile Labin, New York, N. Y., assignor to Federal Telephone and Radio Corporation, New York, N. Y., a corporation of Delaware
Application August 25, 1944, Serial No. 551,201
7 Claims. (Cl. 178—5.8)

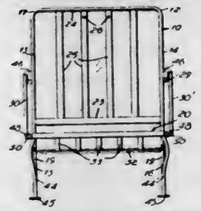
1. A television transmitting system comprising means for producing horizontal and vertical synchronizing pulses for use with each of a plurality of television channels, means for producing lines of different picture signals for each channel in synchronism with said horizontal and vertical synchronizing pulses, means to produce pulses modulated according to sound signals accompanying at least one of said picture signals, means to transmit said picture signals on individual carrier

frequencies, and means to transmit on another carrier frequency said horizontal synchronizing pulses, said vertical synchronizing pulses and said sound modulated pulses.



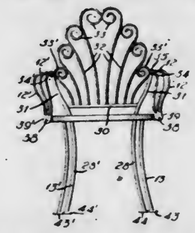
2,437,301
SPEED GOVERNOR
Roscoe R. Lobosco, Elizabeth, N. J., assignor to Union Carbide and Carbon Corporation, a corporation of New York
Application February 26, 1944, Serial No. 523,975
19 Claims. (Cl. 318—328)

1. In combination, an alternating current supply circuit a transformer having primary and secondary windings; a switch for connecting said primary winding to said circuit; a pair of electric discharge devices each having an anode, a control grid and a cathode; circuit means connecting such anodes to opposite terminals of said secondary winding; a voltage divider connected across said secondary winding; a grid biasing circuit for each of said devices comprising a pair of resistors connected to said voltage divider and the control grid of each device; means including a center tap on said secondary winding, adjustable contacts connecting the grid biasing circuits to said voltage divider, and equal values of resistance in the corresponding resistors of such circuits, for balancing the operation of said devices; a make-and-break contact circuit connected across said grid biasing circuits between said pairs of resistors for causing the devices to operate when the make-and-break contacts close; a motor the speed of which is



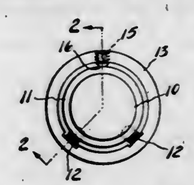
increased by the operation of said devices; and means comprising a generator driven by said motor, a potentiometer energized by said generator, and a contact meter connected to said potentiometer for opening the make-and-break contacts when the motor speed reaches a predetermined value as determined by the adjustment of said potentiometer.

2,437,302
CONCRETE MIXING PLANT
Glenway Maxon, Jr., Milwaukee, Wis., assignor to The T. L. Smith Company, Milwaukee, Wis., a corporation of Wisconsin
Application January 19, 1942, Serial No. 427,298
4 Claims. (Cl. 259—152)



1. An aggregate supply hopper having a wall sloping downward toward the center: a plurality of trap doors each forming part of the bottom of the hopper and each of sufficient size to enable discharge of the hopper contents upon opening thereof, said trap doors having upper and lower portions at different degrees of slope with the lower portions thereof having the lesser slope so that a large piece of aggregate resting on the bottom portions of the closed trap doors does not prevent closure of an opened trap door.

2,437,303
KNOCKDOWN METAL CHAIR
Charles P. Molla, New Hyde Park, N. Y.
Application February 18, 1946, Serial No. 648,396
7 Claims. (Cl. 155—194)



1. An article of furniture comprising a back part, a seat part, arm and front leg members, all detachably coupled with each other in forming a seat-like structure, the back part comprising a U-shaped frame defined by side rods joined by an upper cross-head, lower ends of the rods forming leg members for said back part, a strap joining and spacing the side rods above the lower ends thereof, bands joining and spacing the strap with the cross-head of said frame, the side rods of the frame having forwardly extending brackets, said seat part comprising a rectangular frame of T-shaped cross-sectional form, means detachably coupling the frame of the seat part with the brackets of the back part in coupling said parts together, a plurality of slats joining opposed rails of the seat frame, said leg members having L-shaped bracket portions at the upper ends thereof adapted to fit snugly in corner portions of the seat frame, means detachably coupling the leg brackets with the seat frame, said arm rest members being substantially L-shaped in form, and means at the ends thereof and on the back rest and seat parts for detachably coupling the arm rest members therewith.

2,437,304
KNOCKDOWN WROUGHT IRON CHAIR
Charles P. Molla, New Hyde Park, N. Y.
Application February 18, 1946, Serial No. 648,398
14 Claims. (Cl. 155—194)

5. A knockdown wrought iron chair comprising a back section and seat section, the back section comprising a pair of rear leg members integrally joined at the upper end in a back rest portion, the back rest portion being curved intermediate said legs, a bracket integrally joining and spacing the leg members below the back rest portion, the seat section comprising a frame having an openwork seat portion within the frame, means detachably coupling the frame of the seat section with the bracket of the back section, front leg members, means detachably coupling upper ends of the front leg members with the front portion of the frame of said seat section, upper end portions of the leg members of the back section flaring outwardly above the seat section, the back rest portion including a band joining said end portion of the rear legs above the seat section, arm rest members detachably coupled with the upper ends of the rear leg members and with the sides of the frame of said seat section, said arm rest members intermediate the ends thereof being of openwork construction, the back rest portion comprising a plurality of rods, the lower ends of the rods being secured to said band, and the upper ends of said rods having united coiled portions.

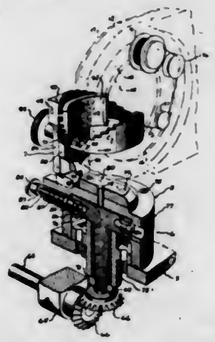
2,437,305
RETAINING MEANS FOR SETSCREWS IN BEARING INNER RACES
Arthur G. Nickle, Saginaw, Mich.
Application September 7, 1944, Serial No. 553,099
7 Claims. (Cl. 287—52.08)

1. The combination that includes a shaft having the inner race of an anti-friction bearing

mounted thereon, circumferentially spaced setscrews for securing the race to the shaft with the heads projecting beyond the outer periphery thereof, a collar assembled over said race, and means for drawing the collar into engagement with the heads of the setscrews, and securing said collar in position on said race.

2,437,306
RADIO DIAL DISPLAY DEVICE
Martin Ramsay, Houston, Tex.
Application December 12, 1944, Serial No. 567,883
2 Claims. (Cl. 116—124.1)

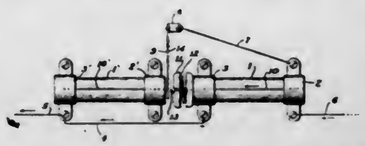
1. In a radio receiving set comprising a housing having an elongated opening therein, the combination of an elongated dial member of polygonal cross section having wave band indicia upon the respective surfaces thereof, end members forming closures for said dial member, a shaft secured to one of the end members to rotate the dial member so that a selected face thereof is moved in front of the elongated opening, a hollow journal member upon which the opposite end member is mounted, a light mounted upon the inner end of said journal member, and means for supplying electrical energy through the journal member to said light.



2,437,307
FLUOROHYDROCARBONS BY REACTING HYDROGEN FLUORIDE WITH ACETYLENIC HYDROCARBONS
Leroy Frank Salisbury, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application October 21, 1944, Serial No. 559,847
6 Claims. (Cl. 260—653)

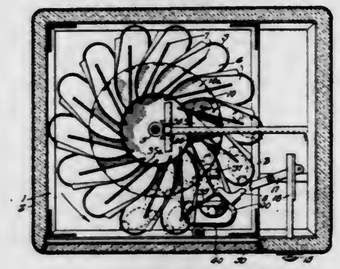
1. The process for obtaining a fluorohydrocarbon, which comprises passing a mixture of hydrogen fluoride and a hydrocarbon of molecular weight not greater than 85 having the general formula RC≡CH, wherein R is of the group consisting of hydrogen atoms and monovalent hydrocarbon radicals, over charcoal-supported mercuric acetate, as catalyst, said mixture being passed over said catalyst under substantially anhydrous conditions in the vapor phase at a temperature within the range of from 25° C. to 250° C.

2,437,308
PROCESS OF MAKING FLUOROPRENE
Leroy Frank Salisbury, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application September 7, 1945, Serial No. 615,090
3 Claims. (Cl. 260—653)



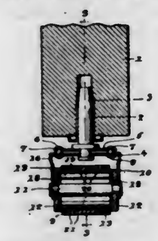
1. In a process for obtaining 2-fluoro-1,3-butadiene, the step of passing a mixture of monovinylacetylene and hydrogen fluoride over charcoal impregnated with mercuric oxide in an amount within the range of from two to 198 grams, calculated as elementary mercury, per liter of charcoal, and coated with basic mercuric nitrate in an amount within the range of from two to 198 grams, calculated as elementary mercury, per liter of charcoal, the total weight of mercuric oxide and basic mercuric nitrate associated with the charcoal being an amount within the range of from four to 200 grams, calculated as elementary mercury, per liter of charcoal.

2,437,309
TOROIDAL WINDING MACHINE
Joseph G. Veatch, Elkhart, Ind., assignor to Chicago Telephone Supply Company, Elkhart, Ind., a corporation of Indiana
Application May 22, 1944, Serial No. 536,715
21 Claims. (Cl. 242—4)



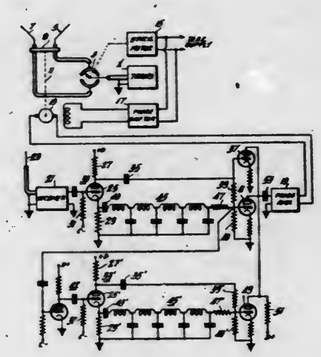
1. In a winding machine of the character described: means for supporting and rotating an annular core upon which strand material is to be wound; a bobbin holding a supply of strand material; means for revolving the bobbin in a circular orbit intersecting the annular core and encircling a segment thereof, the bobbin rotating on its axis in one direction as strand material is unwound therefrom and applied to the core; brake means for retarding the unwinding rotation of the bobbin so as to maintain tension on the strand material as long as it is being unwound from the bobbin; and means for applying a retrieving torque on the bobbin to at all times maintain tension on the strand material and retrieve the same whenever the length thereof from the bobbin to the point of application of the strand material onto the core is decreasing.

2,437,310
DOUBLE FUSE
Norberto Werber, Buenos Aires, Argentina
Application August 8, 1945, Serial No. 609,536
3 Claims. (Cl. 200—126)



1. A device of the nature described comprising a primary fuse and a secondary fuse in axial alinement one with the other, and separated by a relatively small gap, each of said fuses having an intake and an output terminal, a fuse wire in each fuse connecting the respective terminals thereof, means electrically connecting the output terminals of the respective fuses, a support, a lead wire electrically connecting the support to the intake terminal of the primary fuse, a resilient metallic leaf supported at one end on said support and extending into the gap at its opposite end, a two part cap at the output terminal of the primary fuse, the forward part of said cap being secured to the fuse wire of the primary fuse, and a spring interposed between the two cap parts normally exerting a tension between said cap parts and adapted to force the said leaf against the intake terminal of the secondary fuse when the fuse wire of the primary fuse is ruptured.

2,437,311
VENDING MACHINE
Roland T. Wright, St. Louis, Mo., assignor, by mesne assignments, to Bick Corporation, a corporation of Missouri
Application July 18, 1945, Serial No. 605,681
13 Claims. (Cl. 312—46)

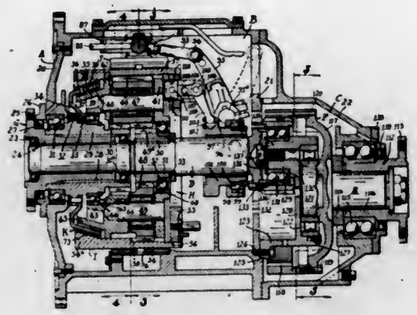


1. A vending machine for bottled goods or the like including a magazine mounted for rotation about a vertical axis, said magazine having a series of radially extending compartments surrounding its axis, a bottom support member for each compartment arranged with respect to side walls of the compartment to support the goods in a substantially vertical position such that the tops of the goods will lean rearwardly with respect to the direction of rotation of said magazine, and means for moving the goods to a vertical and unsupported position causing their discharge from the magazine, said means being operable upon rotation of the magazine, whereby the goods may be discharged from the magazine upon step by step rotation of the magazine.

2,437,312
CASTER FOR FURNITURE
Theodore Bailey, Habana, Cuba
Application May 1, 1944, Serial No. 533,579
2 Claims. (Cl. 16—18)

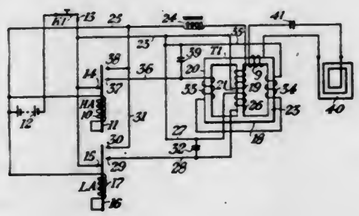
1. In a caster for furniture and the like, the combination, which comprises, a pintle having downwardly positioned offset arms having a transversely disposed shaft carried in the lower ends of the arms, side plates positioned between the arms and mounted on the shaft at a point midway of the length of the side plates, drums positioned between the said side plates and rotatably mounted in the ends thereof, an endless elastic tread band having a fabric base trained over the drums with the fabric base positioned between the edges of the side plates, idler rollers also positioned between the side plates and rotatably mounted therein providing supporting means for the endless tread band between the drums, said endless tread band having transversely spaced longitudinally disposed slits extending from the outer surface partially therethrough dividing the outer portion of the band into strips, and wire reinforcing elements embedded in said elastic tread band between and coacting with the edges of the side plates for retaining the tread band in operative position and preventing accidental separation thereof from the drums and rollers when the caster is drawn laterally.

2,437,313
ELECTRICAL SERVO SYSTEM
Alda V. Bedford, Princeton, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application December 30, 1944, Serial No. 570,624
13 Claims. (Cl. 318—28)



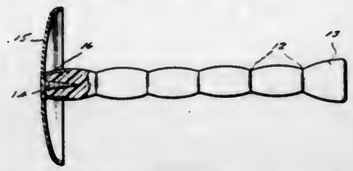
1. In an electrical servo system including an output shaft, a motor coupled to said shaft, means for producing an A.-C. displacement signal of frequency f cycles per second and amplitude substantially proportional to the difference between the actual angular position of said shaft and the position to which said shaft is to be driven, and means for applying said displacement signal to said motor, anti-hunt means including a time delay network designed to provide a delay of length

$$\frac{n}{2f}$$



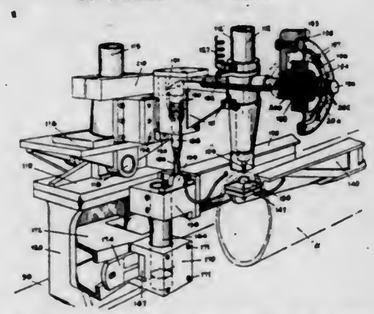
seconds, wherein n is an integer, means for applying said displacement signal to said delay network to produce a delayed displacement signal, and means for applying said delayed displacement signal to said motor in addition to said original displacement signal.

2,437,314
TRANSMISSION MECHANISM
John O. Berndtson, Short Beach, Conn., assignor to The Snow-Nabstedt Gear Corporation, New Haven, Conn., a corporation of Connecticut
Application November 27, 1943, Serial No. 511,955
11 Claims. (Cl. 74—298)



1. In a transmission mechanism, the combination of a driving sleeve gear, a driven sleeve gear, a brakeable pinion-carrying structure cooperating with said gears having two members which are axially shiftable relatively to each other, and a friction element rigidly fixed on and rotating with said first sleeve gear which is adapted to be clamped between substantially parallel opposing friction surfaces carried by the respective members of the pinion-carrying structure.

2,437,315
MEANS FOR SUPPLYING PULSES OF MODULATED CURRENT
Paul N. Bossart, Cheswick, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a corporation of Pennsylvania
Application June 22, 1945, Serial No. 600,899
14 Claims. (Cl. 179—171.5)

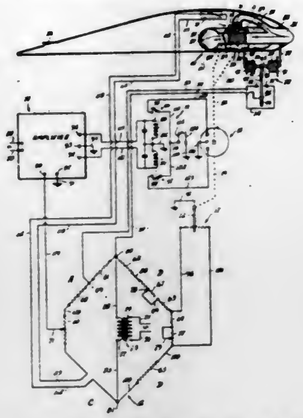


1. In combination, a tuned circuit tuned to resonance at a definite carrier frequency, means including a current source and a vibrator connected to said circuit to periodically impulse excite the circuit to create successive pulses of said carrier current, means including an oscillating member to vary the reactance of said tuned circuit to frequency modulate said pulses of carrier current, and a load element electrically coupled to the tuned circuit to receive said pulses of frequency modulated carrier current.

2,437,316
MEAT SCRAPER
Nate Gambino and Nate La Rosa, Modesto, Calif.
Application April 5, 1946, Serial No. 659,832
2 Claims. (Cl. 15—236)

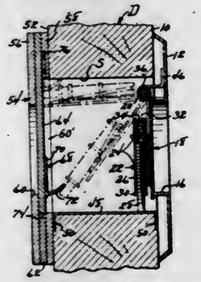
1. A meat scraper comprising a smooth plastic handle member and an outwardly convex smooth plastic blade member, the end of the handle member carrying a non-corrosive metal collar in encircling relationship thereto, a tapered screw member passing through said blade member substantially centrally thereof into screw engagement with said end, said screw member being substantially coaxial with said collar, and the blade member being oriented so that said end is received within the concave portion of the blade member.

2,437,317
SPOT MILLING TUBULAR BLANK FOR PROPELLER BLADES
Dwillard J. Davis, Detroit, Mich., assignor to Avco Manufacturing Corporation, a corporation of Delaware
Application March 8, 1945, Serial No. 581,657
19 Claims. (Cl. 90—14)



1. A machine for spot-milling tubular blanks for use in the fabrication of propeller blades comprising: a longitudinally movable carriage for the blank; means for rotatably supporting the blank on the carriage; a power driven tool for cutting spots in the outer face of, and mounted to move to and from the blank; and means including a member for engaging the inner face of the blank, for limiting the depth of the cut to leave predetermined thickness in the wall of the blank.

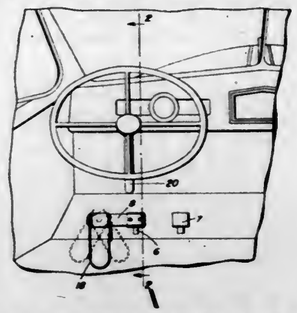
2,437,318
AIRCRAFT HEATING CONTROL SYSTEM
William J. Field, Minneapolis, Minn., assignor to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn., a corporation of Delaware
Application January 31, 1944, Serial No. 520,439
16 Claims. (Cl. 244—134)



1. In a device of the class described, in combination, a hollow airfoil surface having a leading edge, a fuel burner in heat transfer relation with said surface in the region of said edge, and

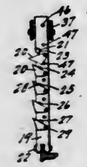
normally ineffective air pressure responsive means for responsively causing restriction of the

supply of fuel to said burner in the event of limiting air pressure conditions.



2,437,319
AIRTIGHT MAIL SLOT
Paul T. Gable, Harrisburg, and William C. Weiss, Penbrook, Pa.
Application May 18, 1945, Serial No. 594,518
4 Claims. (Cl. 232—45)

2. A device of the character described, for use with a mail receiving slot of a house door comprising a front plate and a rear closure in alinement with the mail receiving slot, a mail receiving door pivotally secured to said front plate for inwardly swinging movement within said mail receiving slot, a pin slidably mounted on the rear of said mail receiving door, a spring on said mail receiving door for applying pressure to said pin, an upwardly sliding door forming part of said closure, means on the inner side of said sliding door located in the path of movement of said pin whereby said sliding door is raised upward during the inwardly swinging movement of said mail receiving door.

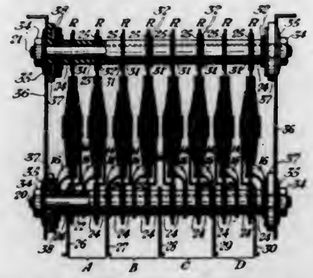


2,437,320
PEDAL ATTACHMENT
Samuel R. Goodman, Jr., Temple, Tex.
Application December 13, 1945, Serial No. 634,694
1 Claim. (Cl. 74—562)

A vehicle pedal attachment comprising a plate attached to the pedal and extending laterally therefrom, a member pivotally mounted in the outer end of the plate for turning movement about an axis at a right angle to the plane of the plate, upstanding flanges at the sides of said member

adapted for engaging the sides of the foot of a person with the toe portion of the foot resting on said member, and a strap carried by the member adapted for extending around the heel of the foot.

2,437,321
AUTOMATIC COUPLING, DECOUPLING, AND ADJUSTING HITCH
Fred R. Hawkins, Waterford, Calif.
Application February 4, 1946, Serial No. 645,290
3 Claims. (Cl. 55—83)

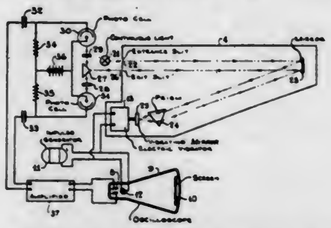


1. Automatic coupling, decoupling and adjusting means for a gang disc harrow or the like comprising; a bar having a series of recesses formed from the top thereof and having one end connected to one gang of the harrow, and having a guard for each recess and movable to guarding and non-guarding positions; a link having connection to the other gang and having a cross-member engageable selectively in said recesses and cooperating with said guards sequentially for closing said recesses against entry of said cross-member when moved in one relative direction, and for opening said recesses sequentially for entry of the cross-member for coupling when moved in the other direction; said guards each comprising a member pivoted at the lower end to said bar and having a stop member for the upper end for cooperation with the top of the bar for two positions and with the guard projecting above the bar for cooperation with said cross-member, and forming a closure for the recess and a riding surface for the cross-member when in one position for decoupling.

2,437,322
ELECTRICAL RECTIFIER
Linnie K. Hedding, Wilkinsburg, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a corporation of Pennsylvania
Application July 11, 1945, Serial No. 604,372
4 Claims. (Cl. 175—366)

1. A rectifier unit comprising a cooling vane, two rectifier elements secured to opposite sides

of said vane, each said element comprising a metal plate provided on each side with a contact layer separated from the plate by a rectifying junction, a contact washer of impressionable conducting material interposed between the inner contact layer of each element and said vane, two spring contact members one clamped against



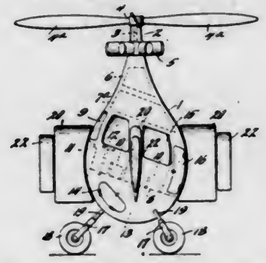
the outer contact layer of each element, means connecting said two contact members together and to said vane, whereby all four contact layers of said elements are connected to said vane, and two connectors one connected to each plate, said unit constituting a single wave rectifier of which said vane constitutes one terminal and said connectors together constitute the other terminal.

2,437,323

APPARATUS FOR INSTANTANEOUSLY INDICATING ON AN OSCILLOSCOPE SCREEN THE ABSORPTION SPECTRUM OF A SUBSTANCE

John J. Heigl, Cranford, and James A. Wilson, Linden, N. J., assignors to Standard Oil Development Company, a corporation of Delaware

Application May 26, 1944, Serial No. 537,416
2 Claims. (Cl. 88—14)



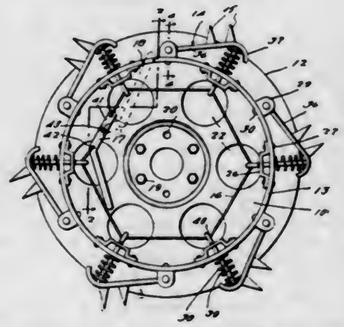
1. In a spectrometer the combination comprising a monochromator having an exit slit, means for producing a spectrum in said monochromator, means for scanning said spectrum over the exit slit to produce a substantially monochromatic beam of energy of continuously varying wave length, means for dividing said beam into two paths, a photocell positioned in each of said paths, means to connect said photocells in opposition to produce a single resultant voltage, sample supporting means positioned before one of said photocells adapted to hold a sample in the corresponding path, standard supporting means positioned before the other of said photocells adapted to hold a standard in the corresponding path, an oscilloscope, means for producing horizontal and vertical scanning in said oscilloscope, means for synchronizing the spectrum scanning means in said monochromator with the horizontal scanning means in said oscilloscope, means for amplifying said resultant voltage, and circuit means for conducting said amplified resultant voltage to the vertical scanning means of the oscilloscope.

2,437,324

HELICOPTER STEERING SURFACE CONTROL

Elden L. Kirchoff, Hawthorne, Calif.

Application February 16, 1945, Serial No. 578,144
6 Claims. (Cl. 244—17)



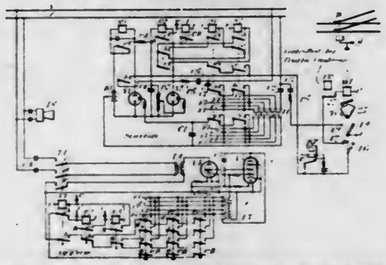
1. A helicopter of the general type including a pilot-enclosing gondola having a vertically-disposed longitudinal axis and having downwardly and outwardly flared side walls, a sustaining rotor mounted above said gondola with its axis of rotation in line with the longitudinal axis of the gondola, a series of approximately equidistantly spaced-apart blades projecting outwardly from the circumference of the gondola for offsetting the torque of the rotor, vanes mounted outwardly of and in laterally-arranged relation with reference to the blades for providing directional control, the blades and vanes being arranged in pairs and the blade and vane of each pair being mounted for pivotal movement upon substantially aligned axes and control means for selectively and independently adjusting either the blades or the vanes about their pivotal axes.

2,437,325

TRACTION LUG FOR AUTOMOTIVE VEHICLES

Vernon E. Koeppel, Cato, Wis.

Application July 29, 1947, Serial No. 764,306
5 Claims. (Cl. 301—45)



5. Traction lugs for automotive vehicles having disk-type wheels carrying resilient tires comprising a disk for cooperating with the wheel disk, means for securing the central portion of said disk to the wheel disk, said disk having a flaring portion extending outwardly from the wheel disk and tire thereon, a peripheral rim on said flared portion of the disk and adjacent to the wheel tire, bearing members at spaced intervals on the outer surfaces of said rim, lug plates hinged thereto so as to extend tangentially thereof, gripping teeth on the outer surface of said plates, springs between said plates and the rim yieldingly projecting them so that the teeth thereon will extend into operative gripping positions beyond the periphery of the tire on the wheel, a guide and retracting rod secured to the inner surface of said lug plates and extending through said springs and the disk rim, said rods terminating with eyelets at their inner ends, retracting means connected with said retracting rod eyelets within the periphery of the disk rim, said retracting means comprising a cable threaded through the eyelets, lever mechanism connected with the ends of said cable for contracting the cable to effect a retraction of the lugs, and said rim having a notch therein engageable by the lever mechanism when it is operated to retract the lugs for holding the same against the pressure of the springs tending to project the lugs to operative position.

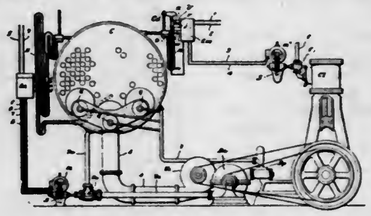
2,437,326

REMOTE CONTROL SYSTEM

Lloyd V. Lewis, Pittsburgh, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a corporation of Pennsylvania

Application November 10, 1944, Serial No. 562,851
9 Claims. (Cl. 177—353)

1. In a remote control system having a pair of line wires to which different codes are supplied, each comprising a sequence of alternating current impulses of successively different frequencies, a receiver including a plurality of tuned circuits each tuned to a different frequency and each coupled to a sharply tuned local circuit tuned to the same frequency for determining the frequencies of the line current to which such receiver is responsive, and stepping means controlled by said receiver in response to the code impulses for connecting said tuned circuits across the line wires only one at a time and for simultaneously connecting the local circuits tuned to the corresponding frequencies to said receiver only one at a time to render the receiver responsive to a distinctive sequence of impulses constituting a code call.



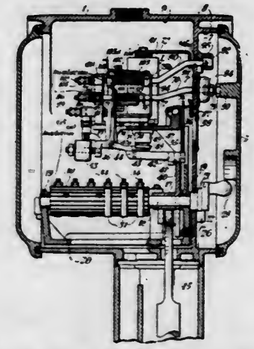
2,437,327

PROCESS FOR REGULATING STEAM GENERATORS AND AUTOMATIC FEED SYSTEMS FOR SUCH GENERATORS

Jean Loumiet et Lavigne, Itabo, Cuba

Original application February 28, 1941, Serial No. 380,987. Divided and this application April 8, 1943, Serial No. 482,284. In Cuba March 9, 1940
9 Claims. (Cl. 122—448)

1. An apparatus for regulating steam boilers of the type provided with a water drum to maintain the water level and the steam pressure substantially constant, comprising means for feeding combustion elements to the boiler, means for feeding water to the boiler, a single motor for driving said feeding means, means automatically operable only in accordance with variations in the steam pressure alone and independent of variations in the water level for varying the speed of said drive motor to vary the speed of all of said feeding means in unison, while maintaining the relative rates of feed of said feeding



means constant to thereby maintain said pressure substantially constant, means automatically responsive only to variations in the water level in said boiler alone and independently of steam pressure variations for varying the rate of feed of the water in relation to the feed of the combustion elements, to thereby maintain the water level substantially constant, and means for suspending the operation of said varying means a short interval after the corresponding regulating steam pressure or water level begins to return towards normal.

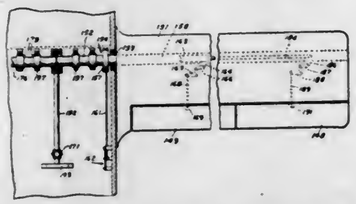
2,437,328

ELECTRIC SWITCH LOCK

William C. McWhirter, Wilkinsburg, and Glen V. Jefferson, Edgewood, Pa., assignors to The Union Switch & Signal Company, Swissvale, Pa., a corporation of Pennsylvania

Application January 30, 1946, Serial No. 644,338
7 Claims. (Cl. 246—159)

1. A locking device for railway traffic controlling apparatus comprising a locking segment, manually operable means connected with said segment for moving said segment between two extreme positions, a locking dog adapted to engage said segment in one extreme position to prevent movement of said segment away from such extreme position, electrically controlled means effective when energized for moving said locking dog to an unlocking position, an emergency release push button biased to one position, means controlled by said push button and effective when



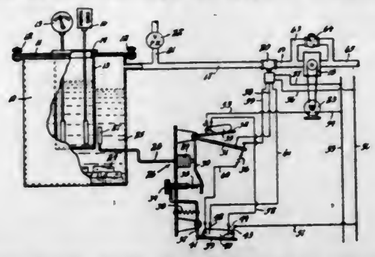
said push button is moved from said one position to another position to move said locking dog to its unlocking position, latch means effective when said push button is moved part way to said other position for subsequently preventing said push button from returning to its one position until said latch means is manually operated to release said push button, and contact means selectively responsive to the latched and unlatched positions of said push button.

2,437,329
SURGICAL INSTRUMENT FOR CURETTING
Frederick J. Moore, Los Angeles, Calif., assignor to the United States of America, as represented by the Secretary of War
Application October 31, 1945, Serial No. 625,825
3 Claims. (Cl. 128—304)

1. A surgical instrument adapted for collecting specimens of bacteria from the surfaces of a body cavity comprising, a tube having a closed end and an open end, said tube being provided with a longitudinal opening adjacent said closed end and provided with an everted edge, and a curetting member formed on the everted longitudinal edge of said tube adjacent said longitudinal opening, the open end of said tube and the longitudinal opening in said tube being in communication with the lumen of said tube to provide a continuous passage therethrough.

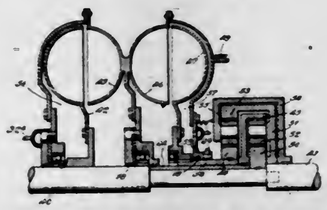
2,437,330
VARIABLE INCIDENCE WING CONTROL FOR AIRCRAFT OF THE ROTARY WING OR AIRPLANE SUSTAINED TYPE
Alexander S. Mullgardt, Altadena, Calif.
Application January 24, 1944, Serial No. 519,476
4 Claims. (Cl. 244—48)

1. In an aircraft, wing spars rotatably mounted on the aircraft and extended into said aircraft, wings on said spars, control shafts rotatable in the aircraft, transmission means to connect each control shaft to an adjacent spar for rotation and for holding the spar in adjusted position, an operating element mounted on said shafts for rotation with said shafts and being slidable axially on said shafts, connecting means between said element and said shafts for rotating said shafts with said element and for converting the axial sliding motion of said element into differential rotation of said shafts oppositely one to the other, and a control mechanism for rotating and sliding said elements on said shafts, said control mechanism including oscillating actuating members, means to convert oscillation of said members in opposite directions into rotation of said element in opposite directions respectively, a rocking member mounted for rocking selectively in opposite directions, means to convert the rocking of said rocking member into sliding motion of said slidable element on said shafts, and means for oscillating said oscillating members and for rocking said rocking member.



2,437,331
FISH STRINGER
Earl F. Murray and Clare E. Hermann, Minneapolis, Minn.
Application November 20, 1945, Serial No. 629,906
2 Claims. (Cl. 224—7)

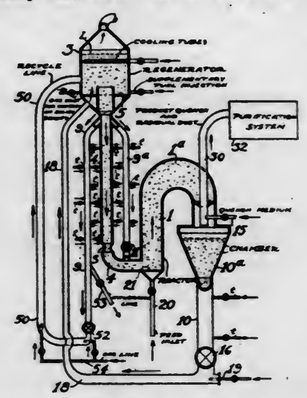
1. A device of the class described comprising a single resilient metal strip having its intermediate portion disposed substantially horizontally to provide an elongated top plate, one end portion of said strip being bent downwardly from the inner end of said top plate and forming an inner vertical clip arm, said strip having a downward return bend at the outer end of said top plate and being extended horizontally from said return bend toward said inner clip arm to provide a lower plate spaced downwardly from and underlying the outer end portion of said top plate, the other end portion of said strip being bent downwardly from the inner end of said lower plate and providing an outer clip arm spaced outwardly from said inner clip arm, said outer clip arm having a spring finger for anchoring the usual ring on one end of a fish stringing line to said outer clip arm, said outer end portion of said top plate and said lower plate having vertically alined openings to receive the usual spike at the other end of the stringing line, said inner and outer clip arms cooperating with said upper and lower plates and said return bend in forming a spring clip to straddle a wall of a boat.



2,437,332
LOW-TEMPERATURE TEST CHAMBER
Alwin B. Newton, Minneapolis, Minn., assignor to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn., a corporation of Delaware
Application January 1, 1944, Serial No. 516,611
12 Claims. (Cl. 62—2)

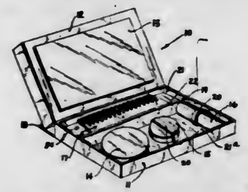
1. In a refrigerating system capable of operating over a range of temperature for utilizing a refrigerant having a vapor pressure above atmospheric pressure at the upper end of said temperature range and below atmospheric pressure at the lower end of said range, means for controlling the vapor pressure of said refrigerant including throttling valve means and pumping means, adjustable condition responsive means, and means for connecting said condition responsive means in controlling relation to said valve means for maintaining a refrigerant temperature

in said upper range or in controlling relation to said pumping means for maintaining a refrigerant temperature in said lower range.



2,437,333
TRANSMISSION
Willard L. Pollard, Evanston, Ill.
Application August 29, 1942, Serial No. 456,594
7 Claims. (Cl. 74—189.5)

1. A hydro planetary transmission comprising rotatable drive means, pump rotor means driven from said drive means, turbine rotor means driven from said pump rotor means, planetary gearing comprising a first gear, a second gear coaxial therewith, and means in force-transmitting relation between said gears including a gear carrier and planet gearing carried by said carrier, said pump rotor means and turbine rotor means comprising a first pump rotor driven positively by said drive means, a first turbine rotor drivable by said first pump rotor, a second pump rotor driven positively by said first turbine rotor, and a second turbine rotor drivable by said second pump rotor, said second gear being driven positively from said first turbine, said first gear being driven positively from said drive means, means for holding said second turbine against reverse rotation with respect to the direction of its pump driven rotation, a third gear driven by said second turbine, a fourth gear driven by said gear carrier, a second gear carrier, and planet gearing carried by said second gear carrier and meshing with said third and fourth gears.

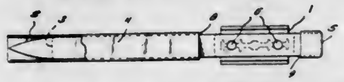


2,437,334
CONTROLLING CHEMICAL REACTIONS
Bruno E. Roetheli, Cranford, N. J., assignor to Standard Oil Development Company, a corporation of Delaware
Application November 23, 1944, Serial No. 564,812
8 Claims. (Cl. 260—680)

1. The method of conducting an endothermic chemical reaction in the presence of a solid catalyst in powdered condition at a high temperature with a short contact time between reaction material and catalyst which comprises establishing an elevated reservoir of hot powdered catalyst, establishing a reaction zone at a substantially lower level, establishing a column of hot powdered catalyst in fluidized condition between said reservoir and said reaction zone, providing for a continuous open flow of catalyst from the bottom of said column into said reaction zone, admixing with catalyst leaving said column a gaseous reactant, causing said gaseous reactant to flow at a sufficiently high velocity to carry said hot powdered catalyst through said reaction zone concurrently with said reactant and at substan-

tially the same velocity to where the catalyst with gaseous products of the reaction are discharged from the reaction zone at its outlet, said velocity being preselected to provide the desired short contact time between catalyst and reactant, abruptly separating said powdered catalyst from gaseous products of reaction at the outlet of said reaction zone, quenching the products of reaction at the point of separation thereof from said catalyst and controlling the temperature of said reaction zone by controlling the temperature and level of said body of hot powdered catalyst in said elevated reservoir.

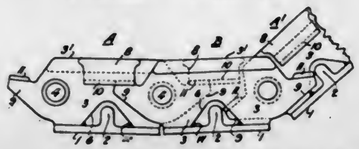
2,437,335
COMBINED COMPACT, PURSE, AND KEY RING
Joseph Shapiro, Brooklyn, N. Y.
Application May 17, 1946, Serial No. 670,512
4 Claims. (Cl. 206—38)



4. A combination article comprising a case and a cover for said case hingeably mounted together along one edge, a mirror hingeably mounted on said article along the same edge adapted to close, in turn, both the said cover and said case, a plurality of cosmetic articles removably mounted in said case, compartments in said cover for receiving and retaining papers, money, keys, and other articles at the option of the user, a comb retaining compartment positioned in said case adja-

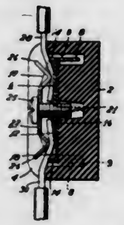
cent said hinged edge, a chamber in said case positioned below said comb retaining compartment having an opening therein through the outside wall of said case whereby a plurality of coins may be inserted into and removed from said compartment, at least one supporting member mounted in said case adapted to be moved between two positions in one of which positions it is adapted to support said cover at an angle with respect to said case and in the other of which positions it is adapted to close the opening into the coin receiving compartment, and means for controlling the position of said supporting member in at least one intermediate position whereby the angle of said cover with respect to said case is adjustable.

2,437,336
ALTERNATING ELECTRIC CURRENT RECTIFIER
Leslie Ernest Thompson and Alexander Jenkins, London, England, assignors, by mesne assignments, to The Union Switch and Signal Company, Swissvale, Pa., a corporation of Pennsylvania
No Drawing. Application August 12, 1944, Serial No. 549,303. In Great Britain March 2, 1944
4 Claims. (Cl. 175—366)



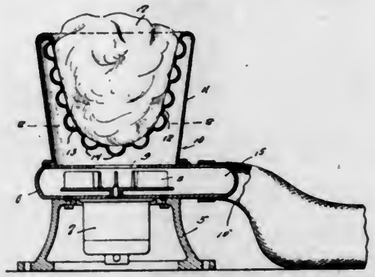
1. An alternating electric current rectifier of the kind described comprising a counter or contact electrode applied to the surface of the semiconductor in which the electrode is composed wholly or partly of potassium or sodium applied by spraying, sputtering or otherwise, for the purpose specified.

2,437,337
RAZOR BLADE HOLDER
Werner Tischendorf, Chardon, Ohio
Application December 1, 1944, Serial No. 566,208
1 Claim. (Cl. 30—332)



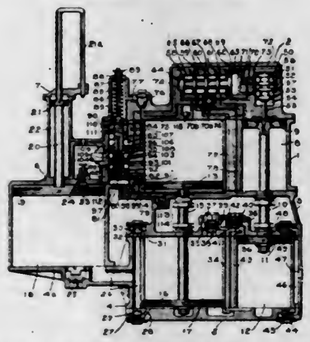
A holder for double edge safety razor blades, comprising long thin flat highly resilient metal strips which have the same length, these metal strips receiving the double edge safety razor blade between them and having less width than the safety razor blade which projects upon opposite sides beyond the strips, the safety razor blade having openings, one strip having openings, lugs carried by the other strip to pass through the openings in the safety razor blade for insertion within the openings of the one strip, the strips extending in one direction beyond the lugs for the major portion of the length of the strips and in an opposite direction beyond the lugs for a short distance, a flat cap removably mounted upon the short ends of the strips and having parallel sides, and a long flat sleeve removably mounted upon the long ends of the strips and having flat parallel sides, the cap and sleeve being shiftable longitudinally toward the lugs until they assume positions near the blade so that their flat sides will press the strips into firm engagement with the blade, the sleeve extending throughout substantially the entire length of the long ends of the strips, said sleeve and long ends constituting a rigid handle, the cap being removable so that the resilient strips may be spread and the blade removed from between the resilient strips without separating the handle from the strips.

2,437,338
ENDLESS TRACK FOR VEHICLES
Leonard William Tripp, Hounslow, England, assignor to Roadless Traction Limited, Hounslow, England
Application April 6, 1944, Serial No. 529,782
In Great Britain September 4, 1942
5 Claims. (Cl. 305—10)



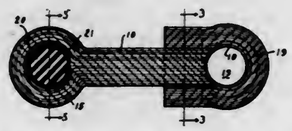
1. Links for endless tracks of the locked girder type comprising ground plates and, secured thereto, separately formed upstanding side plates which on successive links are positioned so that they alternately overlap or are overlapped in the lateral direction, lateral extensions on said side plates which project from the upper part of the latter and overhang the lower part thereof, and abutment faces being provided on the tops of the ends of the side plates and on the undersides of the lateral extensions of the side plates, the abutment faces on the ends of the side plates being positioned to cooperate with the abutment surfaces on the undersides of the lateral extensions on side plates of an adjacent connected link to limit the extent of pivotal movement of the links and thus give the endless track its locked girder characteristic.

2,437,339
CONNECTOR
Benjamin C. Webster, Fairfield, Conn., assignor to The Bryant Electric Company, Bridgeport, Conn., a corporation of Connecticut
Application June 30, 1944, Serial No. 542,949
4 Claims. (Cl. 173—324)



1. In an electrical connector, a pair of clamping members at least one of which is of good electrical conducting material, single pressure applying means cooperating with said members for moving at least one of said members toward the other to clamp wires inserted between said members, one of said members having a relatively rigid central portion positioned to be engaged by said pressure applying means and a plurality of integral independently movable resiliently yieldable parts which project outwardly from edges of said rigid portion and toward the other member to engage and resiliently clamp each wire, respectively, when inserted between said parts and said other member upon operation of said pressure applying means to effect a clamping operation, said other member having projecting parts positioned at opposite sides of each of said yieldable parts, respectively, during a clamping operation, so that a wire inserted between said members in engagement with said parts will be bent during a clamping operation, and one of said members having a plurality of spaced integral guide means for receiving said wires and holding them at least when clamped, in position to be engaged by said parts, respectively.

2,437,340
SUCTION DEVICE FOR REMOVING DUST FROM FABRIC OR THE LIKE
Alfred J. Zugehoer, Hamilton, Ohio
Application December 1, 1944, Serial No. 566,207
1 Claim. (Cl. 15—15)



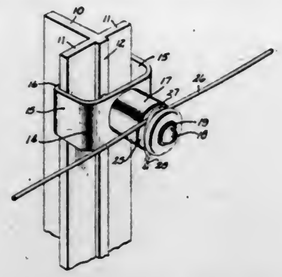
In a device for removing dust from fabric and the like, a base, a housing provided with an opening in its top wall thereof mounted upon said base, a fan mounted for rotation in said housing, a container having an open bottom mounted upon the top wall of said housing and secured to the latter, the open bottom of said container being in communication with the opening in the top wall of said housing, said container embodying a continuous outer wall and a continuous inner wall arranged within said outer wall and spaced from the latter, the inner wall being provided with cup-shaped recesses arranged about the inner surface thereof, there being an opening in each of said recesses, the inner wall and cup-shaped recesses forming a basket-like receptacle for the reception of a dust-containing-fabric therein, a dust collecting bag connected to a side of said housing and in communication with the latter, and means for actuating said fan.

2,437,341
COMPRESSOR MECHANISM
Burton S. Aikman, Wilkinsburg, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a corporation of Pennsylvania
Application January 29, 1944, Serial No. 520,288
9 Claims. (Cl. 230—53)

1. A steam driven air compressor, in combination, a first steam operated piston and cylinder means for compressing air into a reservoir, a second steam operated piston and cylinder means for compressing air into said first means, a third steam operated piston and cylinder means for compressing air into said second means, and valve means conditionable upon the position of the piston of said first means to control the sequence of operation of the three said means, said valve means being effective in one position to admit steam to said first means and to said third means and being effective in another position to interrupt the steam supply to said first means and to said third means and to supply steam to said second means.

2,437,342
DROP BOX PICKER
Henry M. Bacon, Dayton, Ohio, assignor to The Dayton Rubber Company, a corporation of Ohio
Application November 13, 1944, Serial No. 563,248
6 Claims. (Cl. 139—160)

1. In a textile loom picker made of rubberized fabric layers, the combination of a web and reinforcing means rigidly secured together, said picker being provided with a circular rod hole and all of said fabric layers of said web extending to said circular rod hole, a head with at least one shuttle head and a picker stick hole with arcuate stick contacting surfaces formed by said web and said reinforcing means.



2,437,343
PREPARATION OF IMPROVED DRYING OILS
Edward S. Barnitz, Rochester, N. Y., assignor to Distillation Products, Inc., Rochester, N. Y., a corporation of Delaware
No Drawing. Application November 9, 1943, Serial No. 509,625
5 Claims. (Cl. 260—407)

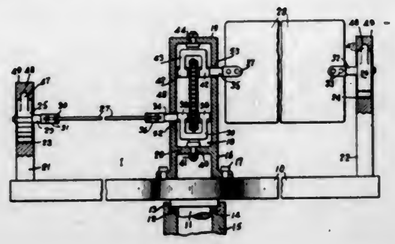
1. The process of preparing an improved drying oil which comprises in combination, subjecting the oil which contains polymerizable constituents to a treatment for removal of at least part of the nonpolymerizable constituents, subjecting the remaining portion of the oil to a bodying treatment, subjecting the bodied oil to high vacuum unobstructed path distillation and separating a substantial portion of unpolymerized oil as a distillate.

2,437,344
INSULATOR AND SUPPORT FOR ELECTRICALLY CHARGED FENCE WIRES
Herman M. Behlmann, Pewaukee, Wis.
Application October 27, 1944, Serial No. 560,642
2 Claims. (Cl. 174—163)

1. Means for securing electrically charged bare fence wires to metal posts having flanges extending laterally in opposite directions from the central portion of the post, comprising the combination of a yoke-shaped member having resilient arms provided with free and mutually spaced hook-shaped extremities adapted to loosely embrace the outer margins of said flanges and to move downwardly along said margins from the

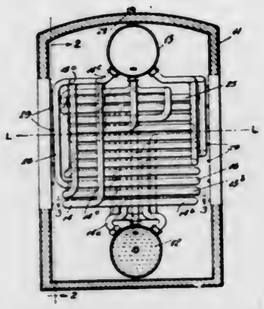
top of the post to the fence wire level, a clamping bolt extending through the central portion of said yoke-shaped member and having threaded engagement therewith, an annularly grooved wire supporting insulator knob through which

said clamping bolt extends along the axial line of said knob, said clamping bolt being adapted when turned in one direction to clamp said knob to the yoke-shaped member and to also clamp the yoke-shaped member to the post under the resiliently yielding tension of its arms.



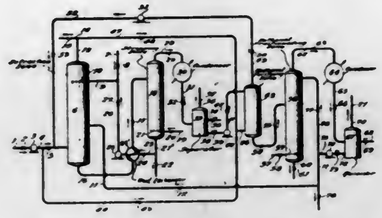
2,437,345
TEMPERATURE COMPENSATED VARIABLE INDUCTANCE
John F. Bell, Chicago, Ill., assignor to Zenith Radio Corporation, Chicago, Ill., a corporation of Illinois
Application February 13, 1943, Serial No. 475,779
9 Claims. (Cl. 171—242)

1. A variable inductance comprising a coil, a conductive non-magnetic slug arranged for movement into and within said coil, one part of said slug being of metal having a definite thermal expansion and another part being of metal of different thermal expansion, said slug being adapted to influence the inductance of the coil progressively as it is moved into the coil.



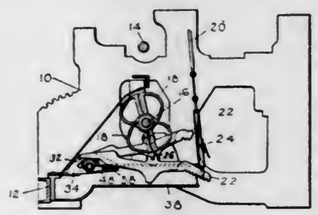
2,437,346
WINDMILL
Raymond D. Bourne, Middletown, Ohio
Application April 8, 1943, Serial No. 482,240
4 Claims. (Cl. 170—27)

1. A wind power mechanism including a rotatable platform, a central support member normal to said platform, end support members on the same side of said platform as said central support spaced radially from said central support member and normal to the platform, blade means positioned between said central support member and the end support members positioned axially at right angles to one another, shaft means rotatably supporting said blade means between said central support member and said end support members, gearing means interconnecting the shaft support means for the blade means to maintain them in a predetermined angular relationship, and means operably connecting the shaft means to said end support members for controlling horizontal planar rotation of said blade means relative to said rotatable platform to alter-



nately position the same into power position at right angles to the direction of air movement against the blades comprising a pinion and a rack of predetermined length.

2,437,347
BOILER CONSTRUCTION
Carl R. Briggs, Mantua, Ohio, assignor of one-half to John Cunningham, Akron, Ohio
Application June 8, 1944, Serial No. 539,353
1 Claim. (Cl. 122—250)

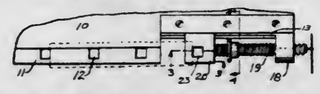


A steam boiler assembly comprising a housing, a sediment drum within said housing and disposed near the lowermost point therein, a steam header tank above and spaced from said sediment drum, heating means consisting of a plurality of burners arranged peripherally around said housing and inturned towards the space between said sediment drum and said steam header tank to enclose and define thereby a combustion space, a plurality of water tubes extending through said combustion space and individually communicating both with said sediment drum and said steam header tank, each said water tube having a spirally coiled portion at an intermediate position thereof, the said coiled portions of all said respective tubes being disposed in horizontal planes at respectively spaced vertical levels within said combustion space, water inlet means in communication with said sediment drum, steam outlet means in communication with said steam header tank, and means for maintaining the water surface within said tubes at an intermediate level in said combustion space, whereby to define a steam generating zone below said level, and a steam superheating zone above said level.

2,437,348
PROCESS FOR THE REFINING OF HYDROCARBON OIL CONTAINING MERCAPTANS
Kenneth M. Brown, Hinsdale, and Clarence G. Gerhold, Riverside, Ill., assignors to Universal Oil Products Company, Chicago, Ill., a corporation of Delaware
Application November 4, 1944, Serial No. 562,026
6 Claims. (Cl. 196—32)

1. In the refining of hydrocarbon oil containing mercaptans by treatment thereof with a solution comprising an alkali and an organic solvent selected from the group consisting of methanol, ethanol, propanol, acetone, ethylene glycol, and glycol ethers, the method which comprises separating said solution from the treated oil and distilling the same to vaporize mercaptans and organic solvent from the alkali, condensing the vapors to form a mercaptan layer and a solvent layer containing a small amount of mercaptans, separating said solvent layer from the mercaptan layer, contacting the separated solvent layer in the absence of said mercaptan layer with hydrocarbon liquid to reduce the mercaptan content of the solvent layer, and separating the solvent of reduced mercaptan content from said hydrocarbon liquid.

2,437,349
HARNESS MOTIONS
Leland D. Cobb, Forestville, Conn., assignor to Draper Corporation, Hopedale, Mass., a corporation of Maine
Application June 7, 1945, Serial No. 598,062
4 Claims. (Cl. 139—79)

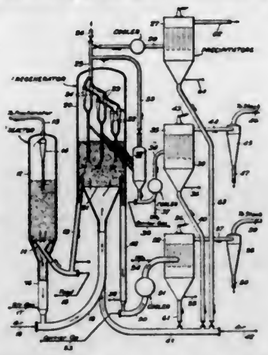


1. In a loom, a harness frame, a harness treadle connected with said frame for operating the latter, a cam for operating the treadle, a gear member on which said treadle is fulcrumed, said gear member having gear teeth extending transversely of said treadle and meshing with gear teeth formed thereon, support means at each end of the gear member supporting the gear member for rolling movement longitudinally of said treadle to adjust the fulcrum point of the treadle, said support means including adjustable relatively fixed structure and means frictionally locking said gear member to said fixed structure.

2,437,350
LIGHTING SYSTEM AND LANTERN FOR USE THEREIN
Paul Edward Ferlin, New York, and Edward Rambusch, Harrison, N. Y., assignors to Rambusch Decorating Company, New York, N. Y., a corporation of New York
Application October 14, 1944, Serial No. 558,660
10 Claims. (Cl. 240—9)

1. A lighting system for churches, auditoriums and the like wherein the occupants face in the same direction when reading or observing scenery and action taking place in front of them, said system comprising a plurality of pendent lanterns each with a light source and a vertical cylindrical shade about the source, the forward halves of the shades being each composed of a single thickness of diffusing sheet material the rear halves of the shades being composed of two thicknesses of like material whereby substantially greater light output is directed toward the reading matter, the scenery and action than toward the rear, and the brightness of the rear side of the shade is substantially less than that of the front side.

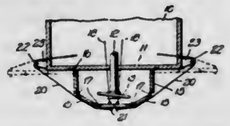
2,437,351
QUICK ADJUSTABLE BENCH VISE
Joseph A. Follmer and Joseph Follmer, Denver, Colo.
Application April 30, 1946, Serial No. 666,085
1 Claim. (Cl. 81—28)



A quick adjustable vise comprising, in combination, an elongated base having a guide extending longitudinally on one side, a perforated lug at one end of the guide, a vise block slidably interconnected with the guide, a screw extending through the opening in the lug, one end of the screw being rotatably connected with the vise block, the screw being longitudinally slidable in the lug, a nut on the screw, between the vise block and the lug, the nut having angularly spaced wings, the surface of the side of the guide facing the screw having a plurality of longitudinally spaced transversely extending depressions for the selective reception of an end of each wing, the depressions having transversely extending stops between their ends to engage the ends of the wings and limit the rotation of the nut, the side walls of the depressions cooperating with the wings to hold the nut from moving longitudinally relative to the base when the screw is rotated to move the vise block.

2,437,352
RECOVERY OF CATALYSTS
Nathan Fragen, Hammond, Ind., assignor to Standard Oil Company, Chicago, Ill., a corporation of Indiana
Application December 29, 1945, Serial No. 638,416
6 Claims. (Cl. 196—52)

1. The process of separating degenerated catalyst from a fluidized solid catalyst hydrocarbon conversion system in which a finely divided catalyst is regenerated by oxidation of carbonaceous deposits in a regeneration zone containing a dense

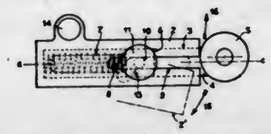


fluidized suspension of catalyst in the lower part thereof and a dilute catalyst phase in the upper part, the improvement which comprises recovering catalyst from regeneration gases in said dilute phase by centrifugal action, redispersing said recovered catalyst in dilute suspension in a gas and passing said dilute suspension through an electrostatic field at a velocity sufficient to carry particles of degenerated catalyst thru said field while retaining the particles of active catalyst and recovering said retained active catalyst for further use.

2,437,353
AUXILIARY PROPELLER FOR AIRSHIPS AND HOUSING THEREFOR

Michael Gliwa, Chicago, Ill.

Application June 10, 1946, Serial No. 675,606
3 Claims. (Cl. 244—26)



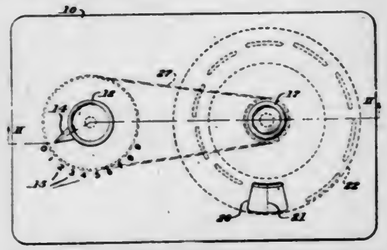
1. In an airship having an auxiliary propeller disposed below the floor of the fuselage thereof, a housing for said propeller comprising a pair of spaced, stationary hoods, said propeller being disposed between said hoods, a pair of series of panels, the innermost panel in each series being hingedly connected to the floor of the fuselage, the panels in each series being hingedly connected to each other, all of said panels being disposed between said hoods in a longitudinal relation, means for drawing said panels in each series into a planar mutual relation coextensive with the floor of the fuselage for freeing said propeller, and means for drawing said panels in a closed enveloping position around the propeller.

2,437,354
POCKET LIGHTER

Bedri Hussein Gostkowski, Geneva, Switzerland, assignor to Universal Lighters Selling Company Ltd., Geneva, Switzerland, a company of Switzerland

Application June 10, 1944, Serial No. 539,746. In Switzerland and Great Britain May 25, 1943
Section 1, Public Law 690, August 8, 1946
Patent expires May 25, 1963
2 Claims. (Cl. 67—7.1)

1. In a pocket lighter having a body and an ignition wheel, a flint holder oscillatably mounted on said lighter, said flint holder having an axially extended bore opening towards the ignition wheel of the lighter and closed at its farther end for housing therein a flint and a spring; said holder further provided with a slide piece slidably ar-

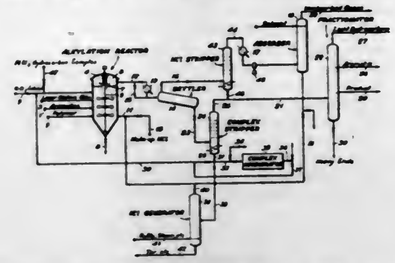


ranged in said bore between said spring and said flint, a guide groove in the wall of said lighter adjacent to said flint holder, said slide piece adapted for cooperating with said guide groove whereby to oscillate said flint holder respectively in and out of alignment with said ignition wheel.

2,437,355
INDICATING DIAL FOR RESISTANCE APPARATUS

Grover R. Greenslade, Scott Township, Allegheny County, Pa., assignor to Flannery Bolt Company, Bridgeville, Pa., a corporation of Delaware

Application August 17, 1946, Serial No. 691,291
5 Claims. (Cl. 201—48)



1. In a resistance-measuring apparatus including a resistor variable in steps and a slide-wire resistor, each resistor having a manually operable shaft for adjusting it, the improvement comprising a disc fixed on the shaft of the slide-wire resistor having a plurality of radially spaced concentric scales thereon, one for each setting of the first-mentioned resistor, a screen rotatable on said last-mentioned shaft above said disc and having slots spaced radially and circumferentially thereof adapted to expose said scales one at a time, and means whereby rotation of the shaft of the first-mentioned resistor rotates said screen and successively exposes the scales for the various settings of said first-mentioned resistor.

2,437,356
CATALYTIC ALKYLATION OF AROMATIC HYDROCARBONS BY LONG CHAIN OLEFINS

Philip Hill, Hammond, Ind., assignor to Standard Oil Company, Chicago, Ill., a corporation of Indiana

Application March 27, 1945, Serial No. 585,123
12 Claims. (Cl. 260—671)

1. In the alkylation of an aromatic hydrocarbon with a higher mono-olefin hydrocarbon having at least 20 carbon atoms in the molecule in the presence of a Friedel-Crafts catalyst, the improvement which comprises effecting said alkylation in the presence of a minor proportion, based on said higher mono-olefin hydrocarbon, of an

added lower olefinic hydrocarbon having a molecular weight not in excess of about 130.

2,437,357
SOLVENT EXTRACTION OF HYDROCARBONS

Art C. McKinnis, Long Beach, Calif., assignor to Union Oil Company of California, Los Angeles, Calif., a corporation of California

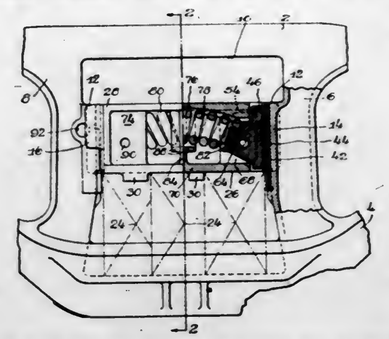
No Drawing. Application June 25, 1945, Serial No. 601,546
9 Claims. (Cl. 196—14.27)

1. A process for the separation of relatively unsaturated hydrocarbons from relatively saturated hydrocarbons contained in a hydrocarbon fraction which comprises contacting said hydrocarbon fraction with an unsymmetrical heterocyclic dinitrogen compound having a six membered ring to effect a change in the relative activities of said unsaturated and said saturated hydrocarbons whereby the said relatively unsaturated hydrocarbons may be separated together with a major proportion of said heterocyclic dinitrogen compound from said relatively saturated hydrocarbon.

2,437,358
CABLE SPLICE

Ralph N. Mowery, Yakima, Wash.

Application May 5, 1947, Serial No. 746,130
9 Claims. (Cl. 174—88)



1. A cable splice comprising a pair of connector blocks having wire connecting means with outer walls, circular bearing heads carried by the blocks, covers for the outer walls, and perforated ring bases having internal seats for mounting the bearing heads to carry said blocks and covers.

2,437,359
SNUBBED TRUCK

Raymond C. Pierce, Chicago, Ill.

Application July 27, 1944, Serial No. 546,826
26 Claims. (Cl. 105—197)

7. In a railway car truck, a side frame having spaced columns defining in part a bolster opening, a bolster spring-supported on said side frame between said columns, openings in the side walls of said bolster aligned with said columns, laterally movable friction shoes in said openings, and resilient means compressed between said shoes and affording a vertical thrust from said shoes to said bolster, said resilient means seating

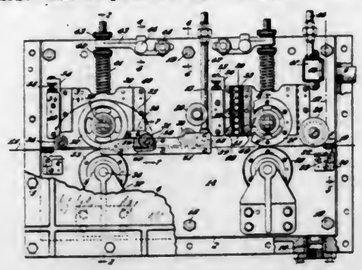
against respective shoes along reversely arranged diagonal surfaces.

2,437,360
LOOSE-LEAF BINDER

Judson A. Purvis, Chicago, Ill.

Application October 28, 1944, Serial No. 560,750
7 Claims. (Cl. 129—1)

7. A loose leaf binder for a book, manual, pad or the like comprising a pair of backing strips arranged in parallel planes, interlocking means on said backing strips adapted to be engaged when the strips are longitudinally moved into parallel, abutting relation to close the binder and separated when the binder is opened for removal or insertion of one or more sheets, and spaced, complementary arcuate shaped loops projecting from each backing strip to combine and provide a plurality of closed binder rings, said backing strips being disposed radially inward and within the confines of the loops so that the book, manual or pad will open flat in back-to-back relation.



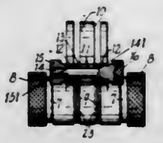
2,437,361
FILM REGISTERING APPARATUS

Gerald F. Rackett, Los Angeles, Calif., assignor to Technicolor Motion Picture Corporation, Hollywood, Calif., a corporation of Maine

Application February 17, 1944, Serial No. 522,711
4 Claims. (Cl. 271—2.3)

1. Film registering apparatus comprising a belt having teeth engageable in sprocket holes of the film, a tank having means for guiding said belt along a predetermined path therethrough, means for continuously feeding two films to the belt at spaced locations along said path, a roller between the two locations for seating the first film on the belt before the second film is applied thereover, a roller beyond the second location for seating the second film over the first film, a plate perpendicular to the axes of said rollers for supporting said means and rollers, and means for detachably mounting the plate on a wall of the tank, each of said seating rollers bearing on the film both inside and outside said teeth and hav-

ing spaces to accommodate the teeth, whereby the first film is pressed tightly against the belt



both inside and outside said teeth before the second film is seated on the first film.

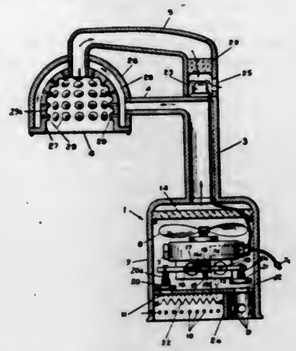
2,437,362
TOP SPINNING ROLLER
Joseph Rockoff, Dayton, Ohio, assignor to The Dayton Rubber Company, a corporation of Ohio
Application July 24, 1942, Serial No. 452,132
6 Claims. (Cl. 19—143)

1. A textile machine unit for processing textile fibers into yarn comprising the combination of a body consisting substantially of acrylic nitrile butadiene copolymer, granulated, water-soluble salt crystals homogeneously dispersed therein, and means for increasing the gripping action of said unit with the textile fibers of the yarn, for disseminating static electricity formed during operation and for preventing lapping up of the textile fibers on said unit, said means consisting of a plurality of projections alternating with cavities on the surface of said unit, said cavities being formed by the crystals vacating said unit.

2,437,363
SIGHT FOR FIREARMS
Ernest C. Smith, Paw Paw, Mich.
Application December 20, 1943, Serial No. 514,879
4 Claims. (Cl. 33—54)

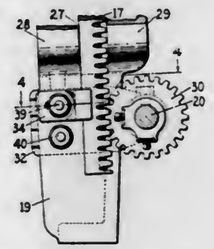
1. In a gun sight assembly, the combination of a bracket member comprising a sight tube having a slot transverse the axis of the tube, said bracket member having a sight element storage recess aligned with said slot in said tube and pivot ears having axes parallel to the axis of the tube and offset therefrom and between said tube and recess, the space between the pivot ears being aligned with said slot and recess, a pivot pin disposed through said pivot ears and provided with a clamping element, a swingable sight element having a pivot ear engaging said pivot pin, whereby said sight element may be swung into said sight tube or into said aligned storage recess, said pivot pin and clamping element being relatively adjustable to clamp said sight element pivot ear, and a tubular clamping member threaded into said sight tube, the inner edge of said slot constituting a clamping shoulder opposed to said tubular clamping member whereby the sight element adjusted within the sight tube may be clamped in its adjusted position, said sight element when in clamping engagement with said clamping shoulder being disposed in the plane of the transverse slot, said tubular clamping member when loosened permitting the sight element to be swung on its pivot pin to the inoperative position outside said sight tube.

2,437,364
DRILL AND COUNTERSINK TOOL
Lawson A. Smith, Los Angeles, Calif., assignor to Robert H. Clark, Los Angeles, Calif.
Application May 5, 1944, Serial No. 534,197
24 Claims. (Cl. 77—66)



1. A tool of the character described including, a body having a mounting shank at one end and having a diagonally disposed straight channel in its side and a socket in it from its other end, a drill having a stem held in the socket and a cutting portion beyond said other end of the body, and a straight elongate countersink cutter held in the channel with a cutting part overlapping the drill and acting in a path overlapping that of the drill and projecting laterally outward from one side of the drill.

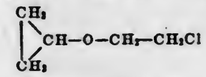
2,437,365
ANNULAR ELECTRONIC TUBE
Albert G. Thomas, Lynchburg, Va.
Original application October 3, 1938, Serial No. 233,136. Divided and this application June 8, 1944, Serial No. 539,246
4 Claims. (Cl. 250—27.5)



1. An electron discharge tube comprising, a pair of sealed coaxial envelopes forming a closed annular space therebetwcen, an annular electrode within said space at each end of said envelopes, and a control element within the inner envelope.

2,437,366
HAIR DRIER
Albert G. Thomas, Alexandria, Va.
Application March 7, 1945, Serial No. 581,363
5 Claims. (Cl. 34—99)

1. In a hair drier, a headpiece, a blower for moving air to said headpiece, a motor to drive said blower, a duct to direct air from said blower to said headpiece, partition means having an opening therein for heated air and an opening therein for relatively cool air on the intake side of said blower, means for heating air in a chamber formed by said partition means and connected with said heated air opening, a pair of valves for periodically closing said openings, and means driven by said motor for actuating said valves for alternately distributing to said headpiece heated air and relatively cool air.



2,437,367
CLOTH TAKE-UP MECHANISM FOR LOOMS
James M. Tuten, Greenville, S. C., assignor to Draper Corporation, Hopedale, Mass., a corporation of Maine
Application March 21, 1947, Serial No. 736,238
5 Claims. (Cl. 139—308)

1. In a cloth take-up mechanism for looms, a pair of generally upright stands, an individual gear rack for and slidably mounted in guideways in each stand and supporting a respective end of the cloth roll, a shaft extending generally between the stands, a pair of pinions on said shaft each at a respective gear rack, means to rotate said shaft, and individual unitary adjustable means at each of said stands acting to support said shaft and to adjustably position each of said pinions in engagement with a respective one of said racks and positioning said racks in alignment with respective ones of said guideways.

2,437,368
2-CHLOROETHYLCYCLOPROPYL ETHER AND METHOD OF PREPARING IT
Robert M. Vance, Cleveland, and Amos G. Horney, Worthington, Ohio, assignors to Air Reduction Company, Incorporated, New York, N. Y., a corporation of New York
No Drawing. Application June 14, 1944, Serial No. 540,319
2 Claims. (Cl. 260—611)

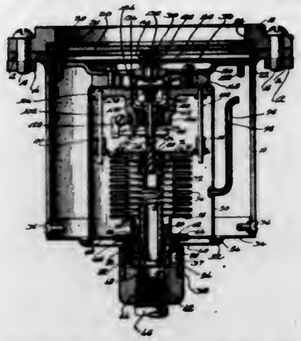
1. A new chemical compound, 2-chloroethylcyclopropyl ether with the structural formula:

2,437,369
FLEXILIZER
William Allshire Waldie, Oakwood, Ohio, assignor to New Wrinkle, Inc., Wilmington, Del., a corporation of Delaware
No Drawing. Application May 18, 1945, Serial No. 594,601
12 Claims. (Cl. 106—250)

1. A method of producing a flexilizing agent for wrinkle coating compositions consisting in heating a mixture of conjugated double-bonded oil and a non-drying oil to substantially 540° F. and maintaining a temperature of 530° to 540° F. until gellation is about to start; adding a further quantity of non-drying oil whereby the gellation is checked; heating to approximately 450° F., adding a wrinkle producing drier selected from the group consisting of cobalt acetate, lead acetate, manganese acetate, cobalt oxide, lead oxide and manganese oxide, and heating to approximately 500° F. until a homogeneous mixture is obtained.

2,437,370
PARA-TERTIARY AMINO PHENYL ALDEHYDES
Cyril D. Wilson, Metuchen, N. J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application March 9, 1945. Serial No. 581,939
3 Claims. (Cl. 260—570.5)

1. A tertiary aromatic bis aldehyde of the formula:

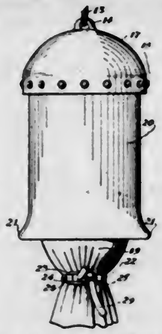


where R is an alkyl group and R'' is a divalent aliphatic hydrocarbon radical.

2,437,371
ABSOLUTE PRESSURE GAUGE
Arthur C. Allen, Chicago, Ill., assignor to Stewart-Warner Corporation, Chicago, Ill., a corporation of Virginia
Application February 4, 1944, Serial No. 521,085
6 Claims. (Cl. 73—410)

5. An instrument of the class described, comprising an evacuated housing, a bellows located in said housing and attached at one end thereto, means for introducing variable pressures into said bellows, a driving shaft mounted in said housing, means for driving said shaft by expansion and contraction of said bellows, a permanent magnet attached to said shaft, indicating means supported on said housing, said indicating means

including a rotatable shaft, and a permanent magnet on said last-named shaft, said magnets



being juxtaposed whereby rotation of said driving shaft rotates said second-named shaft.

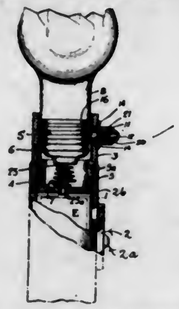
2,437,372

PICKUP AND DELIVERY CONTAINER

Hyde W. Ballard, Merion, Pa., assignor to All American Aviation, Inc., Wilmington, Del., a corporation of Delaware

Application April 12, 1943, Serial No. 482,830
21 Claims. (Cl. 258—1.2)

2. In a shock absorbing transfer container, a dome, a towing connection attached thereto, a flexible skirt attached to said dome, said skirt being constructed of rubberized material and having a larger outside diameter at its trailing edge than at the edge attached to said dome, a canvas pouch attached to said dome, a strap attached to and surrounding said pouch, said strap being constructed of rubberized duck, a staple attached to said pouch, a hasp attached to said strap adapted to fit over said staple when said canvas bag is closed, said staple having sufficient clearance to receive the free end of said strap after the staple has been inserted in the hasp and an enlargement at the outer edge of said canvas bag whereby it is prevented from being drawn through said strap when in a closed position.



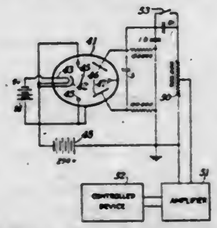
2,437,373

FLASHLIGHT HOLDER

Edward A. Bernstein, Cedarhurst, N. Y.

Application September 4, 1942, Serial No. 457,269
4 Claims. (Cl. 67—31)

2. A holder for a flash bulb, said flash bulb being of the type which has an external metal sleeve which has a contact pin which is located at the inner end of said metal sleeve, said contact pin being insulated from said metal sleeve, said metal sleeve having a longitudinal axis, said holder comprising a longitudinal socket which is made of insulating material, said socket having an inlet opening at its outer end and a lateral inner end-wall which is made of insulating material, a longitudinal metal wall-pin which is fixed to and which extends through said lateral inner end-wall, said socket being constructed and shaped loosely and longitudinally to receive said metal sleeve so that said metal sleeve can be ejected from said socket by sliding said metal sleeve longitudinally out of said socket, a metal ejector spring, one end of said ejector spring being fixed to said wall-pin, the other end of said ejector spring being located to abut said contact pin of said bulb, a longitudinal metal



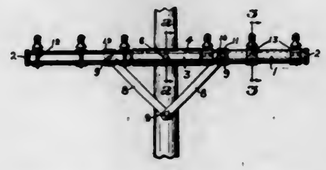
strip which has an outer end-part and an inner end-part, said outer end-part being located laterally inwardly of the inner longitudinal wall of said socket, said outer end-part being located to contact with said metal sleeve of said bulb longitudinally inwardly of said inlet opening, said inner end-part extending through the wall of said socket and being laterally external to said socket, a casing in which said socket is mounted, said casing being made of insulating material, said casing having a casing contact-member which contacts with said inner end-part, said casing having a casing-switch, one terminal of said casing-switch being connected to said casing contact-member and hand-operated latch-means for releasably retaining said bulb in said socket against the action of said ejector spring.

2,437,374

MAGNETIC FIELD MEASURING DEVICE

Robert E. Burroughs, Washington, D. C., assignor to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey

Application May 15, 1945, Serial No. 593,779
1 Claim. (Cl. 175—183)



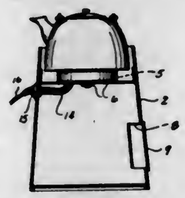
A device for detecting and measuring a shifting magnetic field comprising an electronic tube having at least one cathode and at least two anodes defining a plane orthogonal to at least a component of the magnetic field whereby the ratio of the anode currents is proportional to the field strength effective on the electronic stream from the cathode, a suppressor electrode between the two anodes, at substantially the same electrical potential as said cathode for increasing the sensitivity of changeover of the electron stream from one anode to the other, to change in effective magnetic field, compressor electrodes, also at substantially the same electrical potential as said cathode and located on opposite sides of the electron beam passing from the cathode to the two anodes for compressing said beam, and means connected to the anodes for measuring the relative direct currents therethrough.

2,437,375

CROSSARM FOR TRANSMISSION WIRES

Frank E. Buxton, Wellesley, Mass.

Application May 20, 1944, Serial No. 536,597
9 Claims. (Cl. 174—45)



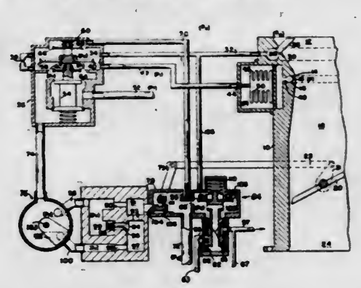
1. A pole cross arm support for transmission line wires comprising a rigid tubular body of water repellent, weather and decay resistant, electrically nonconductive material, a rigid tubular metal reinforce extending throughout the central section of the tubular body in engagement with the wall thereof, closures for the ends of the tubular body, a plurality of wire supporting insulators mounted in the sections of the tubular body between the metal reinforce and the end closures, and means for securing the cross arm at its reinforced central section to a pole.

2,437,376

ELECTRIC RANGE

William Jacob Carter, Seattle, Wash.

Application January 7, 1946, Serial No. 639,521
1 Claim. (Cl. 219—35)



A range of the character described comprising an invertible, tubular housing adapted for upright support on either end, said housing being open at one end and having a wall closing its other end, a heating element supported coaxially in the housing within the open end thereof and spaced inwardly from the end with clearance thereabout for air circulation and adapted to serve as a support for a cooking utensil when the utensil is set down within the open end; said housing providing a warming oven between the element and its closed end and having a side wall opening into said oven and a door for closing said opening.

2,437,377

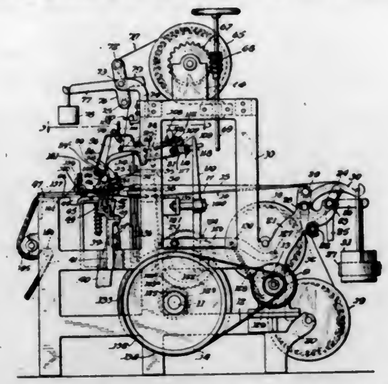
CONTROL APPARATUS FOR INTERNAL-COMBUSTION ENGINES

Milton E. Chandler, New Britain, Conn., assignor, by mesne assignments, to Niles-Bement-Pond Company, West Hartford, Conn., a corporation of New Jersey

Application February 27, 1946, Serial No. 650,624
18 Claims. (Cl. 123—140)

1. A fuel supply system for an internal combustion engine, comprising a first conduit for air flowing into said engine for combustion purposes, means in said first conduit effective to produce an air pressure differential that is a measure of the air flow; a second conduit for fuel flowing into said engine, a metering orifice in said second conduit, the fuel pressure differential across said orifice being a measure of the fuel flow therethru, and a fuel meter responsive to said air pressure differential effective to vary said fuel pressure differential whereby said fuel flow is proportional to said airflow; an injector pump mechanism for delivering fuel to said engine, means in said mechanism to vary the rate of said fuel delivery, a passage for flow of fuel discharged from said metering orifice to said injector pump mechanism, and hydraulic motor means for positioning said delivery varying means; means for controlling said motor means including a valve having a normal position in which said motor means is stationary and effective upon opposite movements from said normal position to cause operation of said motor means in opposite directions, and means responsive to the metering orifice discharge pressure for operating said valve.

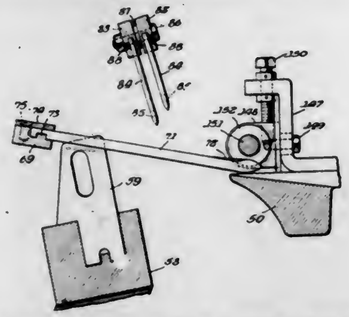
2,437,378



METHOD OF AND APPARATUS FOR WEAVING

Eugene F. Clark, Damariscotta, Maine, assignor to Marshall Field and Company, Chicago, Ill., a corporation of Illinois

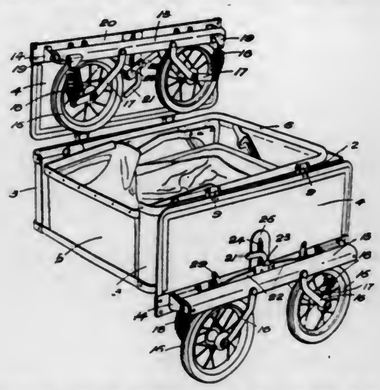
Application December 6, 1944, Serial No. 566,853
44 Claims. (Cl. 139—46)



1. A loom attachment for weaving pile fabrics comprising in combination with a loom, a series of spaced fingers mounted on the loom forward of the harness and extending parallel with the warp, a series of spaced pile yarn feeding guides having eyelets therein through which strands of pile yarn are threaded movably mounted above the spaced fingers, means whereby the said feeding guides are shifted transversely to predetermined positions above the spaced fingers and

moved into and out of the warp whereby the pile yarn is looped over the spaced fingers and means

for beating up the loops thus formed as the fabric is woven.



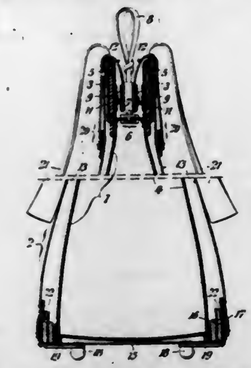
2,437,379
LOOM FOR WEAVING PILE FABRIC
Eugene F. Clark, Damariscotta, Maine, assignor to Marshall Field and Company, Chicago, Ill., a corporation of Illinois
Application April 8, 1946, Serial No. 660,573
12 Claims. (Cl. 139—46)

1. In combination with a loom, a plurality of spaced fingers extending warpwise of the loom, a pair of frames vertically movable on the said loom, a pile thread guide bar slidably mounted on said frames, pile thread guides in said bar, means whereby the said pile thread guides are shogged to various positions over the said fingers and means whereby the said frames are moved in vertical planes thereby carrying the pile thread guides into the shed of the loom.

2,437,380
COLLAPSIBLE CARRIAGE
Leonard Cooklin and Thomas Roy Hollis, Birmingham, England, assignors to Charles Twigg & Company Limited, Birmingham, England, a British company
Application August 23, 1945, Serial No. 612,148
In Great Britain September 12, 1944
10 Claims. (Cl. 280—37)

1. A collapsible carriage of the type forming a portable case when collapsed comprising, a body portion, lid panels at opposite sides of said body portion, wheels for supporting the opposite sides of the carriage secured to the lid panels and mounted so as to be swung upwardly away from one another and downwardly to be brought into operative position, metal stiffening means forming a ring around the exterior of said body portion when the carriage is collapsed, said ring

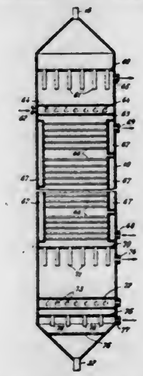
including hinges whereby said lid panels are pivotally mounted to the opposite sides of said body portion, fastening devices whereby said lid panels can be secured in their collapsed position, and locking means for securing said lid panels to the sides of the body portion when in extended position.



2,437,381
EMBALMING APPLIANCE
Arthur V. Cullen, Jamaica Plain, Mass.
Application January 12, 1945, Serial No. 572,533
5 Claims. (Cl. 27—1)

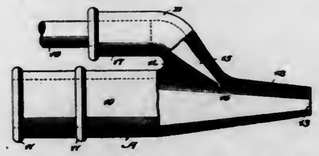
4. An appliance for use in closing the aperture left in the skin of a corpse by the introduction and withdrawal of a trocar, said appliance consisting of a unitary mass of material forming a truncated conical screw-threaded body portion and an axially thin disk-like head to which the larger end of the body portion is joined, both head and body portion being of circular section in planes perpendicular to the axis of the body portion, the maximum diameter of the screw-threaded body portion being greater than the normal diameter of the aperture formed by the trocar whereby when the appliance is screwed into the aperture, the skin bordering the aperture is gradually distended and a leak-tight closure of the aperture is produced.

2,437,382
HANDBAG PROVIDED WITH REMOVABLE, WASHABLE COVER
Eva A. Czap, Philadelphia, Pa.
Application February 1, 1946, Serial No. 644,891
3 Claims. (Cl. 150—28)



2. A handbag consisting of inner and outer elements, the inner element being in the form of a complete bag and made of relatively stiff material, and the outer element consisting of a

piece forming the two sides of the handbag and a separate piece forming the bottom thereof, said pieces being of washable material, a concealed stiffening frame for the bottom piece comprising two hoops fitting one within the other with

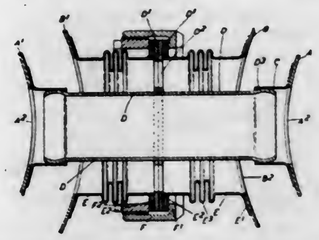


the fabric of the bottom piece frictionally held therebetween and otherwise unattached to said stiffening frame, and fastener means for detachably securing the inner and outer elements together, and means for detachably securing the bottom piece with its frame to said sides.

2,437,383
CRACKING PROCESS
Swanton D. Dalton, Summit, N. J., assignor to Socony-Vacuum Oil Company, Incorporated, a corporation of New York
Application May 2, 1946, Serial No. 666,796
5 Claims. (Cl. 196—55)

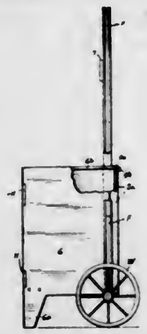
1. A process for conversion of hydrocarbons by contact with a hot granular solid at conversion temperature followed by cooling the reaction mixture below conversion temperature which comprises heating said solid to a temperature in excess of the said conversion temperature, passing the heated solid downwardly through a contacting zone including an upper reaction section, an intermediate cooling section and a lower quenching section, passing hydrocarbon reactants in direct contact with hot granular solid in said reaction section to produce vapors heated to reaction temperature, removing the hot vapors from said reaction section, passing the removed vapors in direct contact with granular solid in said quenching section to thereby reduce the temperature of said vapors and circulating a fluid heat exchange medium in indirect heat exchange relationship with said solid in said cooling section to reduce the temperature of the said solid therein.

2,437,384
SANDING DEVICE FOR RAILWAY ROLLING STOCK
Norman E. Gee, Narberth, Pa.
Application April 17, 1947, Serial No. 742,119
1 Claim. (Cl. 291—46)



A sanding nozzle for directing sand onto railway rails adjacent the wheels of rolling stock, comprising a hollow distensible sanding body of resilient rubber, said body including a cylindrical portion having an integral exterior rib at one free end and a second integral and exterior rib spaced therefrom, said ribs being adapted to prevent the dislocation of attaching means surrounding said body portion between said ribs, said body also including an exteriorly and interiorly frustro-conical portion integral at its wider end with said cylindrical portion and having its smaller diameter at its free open end, and a compressed air inlet distensible member formed integrally with said body and of resilient rubber, said inlet member being disposed laterally of said body and including a cylindrical portion disposed parallel to said cylindrical body portion, said cylindrical inlet member portion being formed for connection to a compressed air line, said inlet member also including an exteriorly and interiorly frustro-conical portion having an axis forming an obtuse angle with the axis of said cylindrical portion of the inlet member, said frustro-conical inlet member portion thus forming a frustro-conical passage having its smaller diameter remote from the cylindrical portion of said inlet member and communicating at its smaller end with the conical body portion intermediate the ends therof, the axis of said frustro-conical passage in said inlet member forming an acute angle with the axis of said frustro-conical body portion whereby an air stream from the air line is deflected at the bend of the two inlet member portions and distends said conical body portion laterally or in the plane of said body and inlet member to dislodge frozen said and the like closing the open end of said conical body portion.

2,437,385
JET PROPULSION PLANT
Frank Bernard Halford, Edgware, England, assignor to The De Havilland Aircraft Company Limited, Edgware, England, a company of Great Britain
Application July 20, 1943, Serial No. 495,516
In Great Britain November 21, 1941
Section 1, Public Law 690, August 8, 1946
Patent expires November 21, 1961
6 Claims. (Cl. 285—90)



1. In apparatus of the character described, in combination with adjacent chambers adapted to be subjected to high heat and an air jacket for each of said chambers, tubular means forming a

connection between adjacent chambers, tubular means forming a connection between adjacent jackets and concentric with said first named connection to form an annular passageway therebetween, said connections respectively constituting lateral passages between said chambers and said jackets, said connection between said jackets including a pair of similar outer tubular members connected at one end to a jacket and constituting

a branch therefrom, said connection between said chambers including a pair of similar inner tubular members having at one end a sliding connection associated with the wall of a chamber, each of said outer and inner tubular members having a flange at its end remote from the jackets and chambers, said flanges adapted to be against each other, and means for clamping said flanges together to couple simultaneously the passages between the jackets and chambers.

COLLAPSIBLE CART
Milton Hochron, New York, N. Y.
Application February 18, 1947, Serial No. 729,238
3 Claims. (Cl. 280—36)

1. A collapsible cart which comprises a rear frame, wheels turnably connected to the bottom portion of said rear frame, a rear body wall which is fixed to said rear frame, a bottom body wall turnably connected to said rear frame at the bottom thereof, the width of said bottom wall being less than the width of said rear wall, a front wall turnably connected to the front edge of said bottom wall, said bottom wall and said front wall being of equal width, side walls turnably connected to said front wall at its vertical edges, said side walls being of less width than said bottom wall and said front wall, said side walls being turnable in overlapping relation against the inner face of said front wall, said side walls having legs in the same planes as said side walls at the corners between said front wall and said bottom wall, said bottom wall and said front wall being turnable relative to each other into the same plane, said legs overlying the innerface of said bottom wall when said side walls are turned to said overlapping relation, said bottom wall being turnable relative to said rear wall to a position in which one of said overlapping side walls abuts the inner face of said rear wall, means to hold said rear walls assembled with said other walls, said walls forming a box-like structure when said side walls are parallel to each other, and the rear edges of said side walls abut said rear wall, said legs then depending below said bottom wall at the front corners of said bottom wall to serve as a supplementary support to hold said box-like body in upstanding position, and connecting means which connect said side walls to said rear wall when said side walls are parallel to each other in order to maintain said box-like structure.

PROCESS FOR THE HARDENING OF SOIL AND THE LIKE
Ronald Mortimer Hodgson, London, England
No Drawing. Application July 1, 1946, Serial No. 680,841. In Great Britain July 11, 1945
12 Claims. (Cl. 61—36)

1. A process of hardening the soil which consists essentially in treating the soil with a solution of a material selected from the group consisting of calcium and magnesium chlorides, and with a solution of a material selected from the group consisting of sodium and potassium hydroxides, and thereafter treating the soil with a solution of sodium silicate.

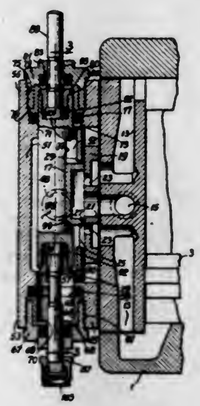
2-OXAZOLIDONE COMPOUNDS AND PROCESS FOR PREPARING THE SAME
August H. Homeyer, Webster Groves, Mo., assignor to Mallinckrodt Chemical Works, St. Louis, Mo., a corporation of Missouri
No Drawing. Original application February 13, 1942, Serial No. 430,741. Divided and this application February 16, 1946, Serial No. 648,206
24 Claims. (Cl. 260—307)

1. The method of making 2-oxazolidones which are substituted in the 3-position which comprises mixing a monoethanolamine, the α carbon atom being primary, a dialkyl carbonate and an alkaline metallic compound catalyst under substantially anhydrous conditions, and condensing the moisture-free mixture to directly form a 2-oxazolidone.

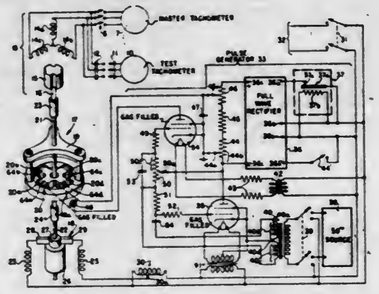


2,437,389
OXAZOLIDONES AND PROCESS FOR MAKING THE SAME
August H. Homeyer, Webster Groves, Mo., assignor to Mallinckrodt Chemical Works, St. Louis, Mo., a corporation of Missouri
No Drawing. Original application February 13, 1942, Serial No. 430,741. Divided and this application February 16, 1946, Serial No. 648,207
19 Claims. (Cl. 260—307)

1. The method of making 2-oxazolidones which are twice substituted in the 4-position which comprises mixing a β-alkyl β-amino alcohol in which the amino group is attached to a tertiary carbon atom, a dialkyl carbonate and an alkaline metallic compound catalyst under substantially anhydrous conditions, and condensing the moisture-free mixture to directly form a 2-oxazolidone.

2,437,390
2-OXAZOLIDONE COMPOUNDS AND PROCESS FOR PREPARING THE SAME
August H. Homeyer, Webster Groves, Mo., assignor to Mallinckrodt Chemical Works, St. Louis, Mo., a corporation of Missouri
No Drawing. Original application February 13, 1942, Serial No. 430,741. Divided and this application February 16, 1946, Serial No. 648,208
15 Claims. (Cl. 260—307)

1. The method of making 2-oxazolidones which are substituted in the 4-position which comprises mixing a β-amino alcohol in which the amino group is primary and is attached to a secondary carbon atom, a dialkyl carbonate and an alkaline metallic compound catalyst under substantially anhydrous conditions, and condensing the moisture-free mixture to directly form a 2-oxazolidone.



2,437,391
QUICK-ACTING VALVE MECHANISM FOR ACTUATING THE DISTRIBUTING VALVE OF EXPANSIBLE CHAMBER MOTORS
Victor G. Klein and Rudy F. Schneller, St. Louis, Mo., assignors to Lincoln Engineering Company, St. Louis, Mo., a corporation of Missouri
Application April 13, 1946, Serial No. 661,976
7 Claims. (Cl. 121—152)

1. In apparatus of the character described, a casing formed to provide a chamber for fluid pressure intermediate longitudinally spaced bores, each of said bores opening into said chamber, a double-ended piston reciprocable in said casing and having its ends slidable in said bores, said ends having a sufficiently loose fit in said bores to permit passage of fluid therebetween, a packing in each bore adapted to engage the end of the piston therein in fluid-tight relation when said end is moved into said packing, the length of said piston and the spacing of said packings being such that when one end of the piston is withdrawn from the packing in one bore, the other end of the piston is moved into the packing in the other bore, whereby fluid pressure from the casing is admitted to said one bore and cut off from the other.

6. In apparatus of the class described, stepped cylinder means for accommodating stepped piston means comprising a member having a counterbore, a ring packing in the base of said counterbore, a hat-shaped member in the counterbore, said hat-shaped member forming a cylinder and having an outer rim seating on said packing and having a crown including an opening, a member threaded into the counterbore around said hat-shaped member, said threaded member having an opening and a counterbore, and a second packing in the last-mentioned counterbore which is held by the crown of said hat-shaped member.

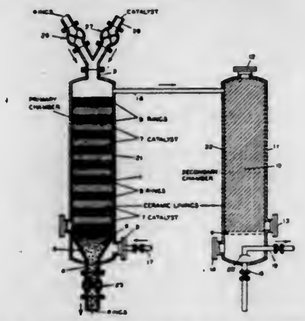
2,437,392
SYNCHRONOUS DRIVING APPARATUS
Ludvik J. Koci, Chicago, Ill., assignor to Sunbeam Corporation, Chicago, Ill., a corporation of Illinois
Application October 27, 1944, Serial No. 560,701
11 Claims. (Cl. 172—293)

9. In combination with a rotatable element and non-synchronous means for driving said element either at a predetermined base speed or at any one of a plurality of speeds which are integer multiples of said base speed, the apparatus for sustaining rotation of said element exactly at any selected one of said speeds which comprises relatively rotatable rotor and stator structures, a torque transmitting connection between said rotor structure and said element, stationary supporting means for said stator structure, said structures having relatively rotatable teeth which are periodically brought into registry at a rate determined by the selected speed of rotation of said element, a winding carried by one of said structures, and means for periodically delivering current pulses to said winding at a rate such that the occurrence of said pulses is synchronized with full registration of said teeth only when said element is driven by said non-synchronous means exactly at a selected one of said speeds, whereby rotation of said element exactly at a selected one of said speeds is sustained by the synchronizing torque resulting from a non-synchronous relationship between the occurrence of said pulses and full registration of said teeth and rotating torque is transmitted to said stator structure in response to transient changes in the speed of said element, and damping means interconnecting said supporting means and stator structure to damp out said transient changes in the speed of said element.

2,437,393
WEED PULLER
Lester F. Kramer, Enumclaw, Wash.
Application June 24, 1946, Serial No. 678,815
4 Claims. (Cl. 294—50.6)

3. A weed pulling implement comprising an elongated handle, a pair of flexible spring legs projecting from the handle at one end and having their outer portions converging, said converging

portions being provided with outwardly extending portions adapted to overlap one another when



the legs are twisted by rotation of the handle, and a foot depressor carried by the handle.

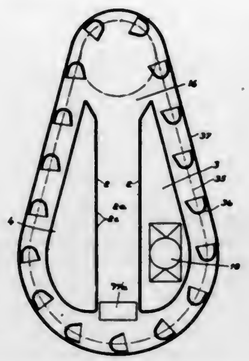
2,437,394

CATALYTIC PROCESS FOR THE ISOMERIZATION OF HYDROCARBON VAPORS IN THE PRESENCE OF A METAL-HALIDE CATALYST

Harold R. Legatski, Bartlesville, Okla., assignor to Phillips Petroleum Company, a corporation of Delaware

Application August 11, 1945, Serial No. 610,339
4 Claims. (Cl. 260—683.5)

1. In a continuous catalytic process for the isomerization of hydrocarbon vapors in the presence of a metal halide catalyst the method which comprises passing the hydrocarbon vapors to be isomerized into the bottom end of a catalyst zone charged with alternate layers of metal halide catalyst and granular inert members, said catalyst zone having a bottom inlet end and a top outlet end with respect to hydrocarbon flow, maintaining said catalyst zone under isomerizing conditions, removing hydrocarbon vapors and vaporous metal halide catalyst from the outlet end of said catalyst zone, and continuously adding alternate layers of metal halide catalyst and granular inert members to the outlet end, and removing said granular inert members from the inlet end of said catalyst zone.



2,437,395

APPARATUS FOR TREATING GRANULAR MATERIALS

Folke Gösta Robert Magnusson, Stockholm, and Gustav Valdemar Öholm, Nockeby, Sweden

Application July 23, 1943, Serial No. 495,904
In Sweden June 20, 1942
5 Claims. (Cl. 34—102)

1. An apparatus for treating materials comprising two substantially vertical, stationary end walls, two substantially horizontal hollow bodies located between and fixed to said end walls and having mutually facing walls spaced from one another to form a vertical shaft between the hollow bodies, said mutually facing walls having perforations for the passage of a medium from one hollow body to the other right across the shaft, inlet and outlet pipes for the medium in said end walls communicating with the interior of the hollow bodies, guide means above the hollow bodies, an endless conveyor arranged between the end
